This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

CLERKS IN THE TREASURY DEPARTMENT.

LETTER

FROM

THE SECRETARY OF THE TREASURY,

COMMUNICATING

List of clerks employed in that department for the year 1859.

FEBRUARY 17, 1860.—Laid upon the table, and ordered to be printed.

TREASURY DEPARTMENT,
February 17, 1860.

SIR: I have the honor to transmit herewith statement marked A, and numbered from 1 to 13, showing the names of the clerks employed in the office of the Secretary of the Treasury and in the several bureaus of the Treasury Department, the sums paid to each during the year 1859, and the places of their residence at the time of their appointment.

I am, very respectfully,

HOWELL COBB,
Secretary of the Treasury.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

A.

Statement showing the names of the clerks and others employed in the office of the Secretary of the Treasury, and the sums paid to each, for the year 1859, *and also the State of their residence at the time of their appointment.*

STATEMENT—Continued.

* William Ferguson, J. D. Southard, and D. L. Dana, clerks in Third Auditor's office, transferred to and doing duty in this office.

† R. J. Deloney, clerk Fifth Auditor's office, transferred to and doing duty in this office.

‡ C. A. Jordan, clerk office Secretary of the Treasury, transferred to and doing duty in this office.

§ J. M. Lumpkin, clerk Sixth Auditor's office, transferred to and doing duty in this office.

These clerks are paid in the bureaus in which they severally hold their appointments.

The statement above exhibits in detail the names, grade, time during which they were employed, and the compensation of the several clerks, messenger, and other persons in the office of the First Comptroller of the Treasury during the year ending December 31, 1858, together with the States and Territories of which they were respectively citizens at the time of their appointment.

The clerks and other employés have been assiduous in the discharge of their duties, the pressure of public business requiring in some instances attendance at the office beyond the usual working hours.

There are, exclusive of the chief clerk, but fourteen clerks properly belonging to this office, one of whom is detailed upon duties disconnected with this office, and six clerks temporarily employed from other bureaus, and liable at any moment to be withdrawn.

The proper discharge of the business of this office requires the services of twenty clerks, as heretofore recommended, and daily experience but convinces me of this necessity. I respectfully renew this recommendation.

W. MEDILL, *Comptroller.*

FEBRUARY 3, 1860.

No. 2.—*Statement exhibiting the names, residence when appointed, time employed, and amount paid each of the clerks and other persons employed in the office of the Second Comptroller of the Treasury during the year* 1859, *as required by the ninth section of the act of April* 20, 1818, *the eleventh section of the act of August* 26, 1842, *and the resolution passed by the House of Representatives January* 13, 1846.

Names.	Grade.	Whence appointed.	Time employed.	Salary.	Amount paid.
Thomas J. Cathcart	Chief clerk	District of Columbia	Whole year	$2,000 00	$2,000 00

STATEMENT—Continued.

I hereby certify that the above clerks and other persons now attached to this office have been usefully employed, and their services cannot be dispensed with without detriment to the public service, and that the removal of any individuals and the appointment of others in their stead is not required for the better despatch of business.

T. J. D. FULLER,
Second Auditor.

TREASURY DEPARTMENT,
Second Auditor's Office, February 11, 1860.

Names of clerks employed in this, detailed from other offices, with the time so employed, as follows:

From the Third Auditor's office, J. A Thockmorton, from January 1 to December 31, 1859, District of Columbia; Joseph McDowell, from January 1 to December 31, 1859, Ohio.

From the First Auditor's office, R. H. Henderson, from November 14 to December 31, 1859, District of Columbia.

No. 5.

TREASURY DEPARTMENT,
Third Auditor's Office, January 9, 1860.

SIR: In conformity with the 9th section of the act of April 20, 1818, and the 11th section of the act of August 26, 1842, I have the honor to transmit herewith a statement containing the names of the clerks and other persons who have been employed in this office, under authority of law, during the last twelve months ending December 31, 1859, exhibiting the time each was employed, the amount paid each, and the State or Territory of their residence at the time of their appointment. It is also required that I report to you "whether the services of any of the clerks can be dispensed with without detriment to the public service, and whether the removal of any individuals and the appointment of others in their stead is required for the better despatch of business." In regard to which I have to state that the force actually employed in this office is such as not to warrant my dispensing with the services of any of the clerks at the present time. It may, however, become my duty at some future day to make a special report to you, as required by the latter clause of the above-quoted section.

With great respect, your obedient servant,

R. J. ATKINSON, *Auditor.*

Hon. HOWELL COBB,
Secretary of the Treasury.

No. 5—Continued.

Report of the names of the clerks and other persons employed in the office of the Third Auditor of the Treasury during the year 1859, *showing the time each was employed, the State or Territory of their residence at the time of their appointment, and the sums paid each; prepared in pursuance of the* 11*th section of the act of August* 26, 1842.

No. 6.

TREASURY DEPARTMENT,
Fourth Auditor's Office, January 4, 1860.

SIR: I have the honor to transmit herewith a statement showing the names of the clerks and others who have been employed in this office during the year ending December 31, 1859, or any part thereof, together with the time that each clerk or other person was actually employed, the sum paid to each, and to state that they have generally been usefully employed, and the services of none of them can be dispensed with without detriment to the public service.

I have the honor to be, very respectfully, your obedient servant,

A. J. O'BANNON,
Fourth Auditor.

Hon. HOWELL COBB,
Secretary of the Treasury.

No. 6—Continued.

Statement showing the names of the clerks and other persons employed in the office of the Fourth Auditor of the Treasury during the year 1859, *or any part thereof, with the time each person was employed, the sum paid to each, and also the place of their respective residence when appointed.*

The clerks and other persons named in the above statement have generally been usefully employed, and the services of none of them can be dispensed with without detriment to the public service.

A. J. O'BANNON, *Fourth Auditor.*

TREASURY DEPARTMENT, *Fourth Auditor's Office, January* 4, 1860.

No. 7.

TREASURY DEPARTMENT,
Fifth Auditor's Office, February 10, 1860.

SIR: I have the honor to transmit you herewith a statement showing the names of the clerks and other persons employed in this office during the year 1859, the time each of them was so employed, the amount of compensation paid them, and the place of their residence at the time they were severally appointed; prepared in pursuance of the 11th section of the act of Congress approved August 26, 1842, and the resolution of the House of Representatives of January 13, 1846. I have also to say that, in my judgment, the clerks and other persons named have been usefully employed; that their services cannot be dispensed with without detriment to the public interests, and that the despatch of public business does not require the removal of any person now employed in this office and the appointment of others in their stead.

Very respectfully,

BARTH. FULLER, *Auditor.*

Hon. HOWELL COBB,
Secretary of the Treasury.

No. 7—Continued.

Statement showing the names of the clerks and other persons employed in the office of the Fifth Auditor of the Treasury during the year 1859, *the length of time they were so employed, the compensation paid them, and their place of residence when appointed, as required by the* 11*th section of the act of August* 26, 1842, *and resolution of the House of Representatives of January* 13, 1846.

Respectfully submitted.

JANUARY 26, 1860.

THOMAS M. TATE, *Auditor.*

No. 9.

TREASURY DEPARTMENT,
Office Light-house Board, January 23, 1860.

SIR: I have the honor to transmit herewith, in compliance with the requirements of the 10th section of the act of Congress of August 26, 1842, and the resolution of the House of Representatives of January 13, 1846, a statement showing the names of the clerks and other persons employed in this office during the year ending December 31, 1859, or any part thereof, the amount paid to each on account of salary, &c., in pursuance of and authorized by the acts of Congress approved March 3, 1853, 2d session 32d Congress, chap. 97, page 210 Pamphlet Laws; April 22, 1854, 1st session 33d Congress, chap. 97, page 276 Pamphlet Laws; chap. 242 of the act approved August 4, 1854, page 572 Pamphlet Laws; and act and joint resolution approved August 18, 1856.

I have also to state that during the past year all the persons in this office have been usefully employed, and that the interests of the public service do not demand any change.

Very respectfully,

R. SEMMES, *Secretary.*

Hon. HOWELL COBB,
Secretary of the Treasury.

No. 9—Continued.

				50,079 12	

I certify the foregoing to be a true statement of the names of the clerks and other persons that have been employed in this office during the year 1859, or any part thereof, together with the time that each was actually employed, and the sum paid to each. I further certify that they have been usefully employed; that the services of none of them can be dispensed with without detriment to the public service; and that it is not required for the better despatch of business that any of them should be removed and others appointed in their stead.

F. BIGGER, *Register.*

TREASURY DEPARTMENT, *Register's Office, January* 10, 1860.

No. 11.

Report in compliance with the 11th section of the act of August 26, 1842, and resolutions of the House of Representatives adopted January 13, 1846, in relation to the clerks and other persons employed in the office of the Treasurer of the United States during the year 1859.

Name.	Grade.	Residence at the time of appointment.	Time employed.	Amount paid.
Wm. B Randolph	Chief clerk	Virginia	The entire year	$2,000 00
Wm. D. Nutt	Clerk	Mississippi	do	1,800 00
Anthony McLean	do	Virginia	do	1,800 00
Sam'l M. Bootes	do	Dist. of Columbia	do	1,600 00
Wm. S. Morgan	do	Virginia	do	1,600 00
Hopkins Lightner	do	Pennsylvania	do	1,600 00
John H. Smith	do	Washington	do	1,600 00
Rich'd L. Brown	do	do	do	1,600 00
Jno. G. Hedgman	do	Virginia	do	1,400 00
Chs. M. Perry	do	do	do	1,400 00
Lewis B. Wynne	do	Illinois	do	1,246 19
Rob't E. Preston	do	Tennessee	do	1,200 00
Chs. W. Handy, dec'd	do	Dist. of Columbia	Jan. 1 to Sept. 30	1,050 00
W. H. Joyner	do	North Carolina	Jan. 1 to July 6	722 82
R. H. S. Buchanan	do	Georgia	July 7 to Dec. 31	677 18
John W. Clarke	do	Washington	Oct. 7 to Dec. 31	280 44
Henry B. Croggon	Messenger	Dist. of Columbia	The entire year	840 00
Henry Croggon	Ass messenger	do	do	700 00
Daniel Robertson	Laborer	do	do	600 00
Ben. Lanum	do	do	do	600 00

The foregoing are all regularly appointed to fill their respective stations in the Treasurer's office, provided for and authorized by law; but Messrs. Brown, Joyner, Buchanan, Preston, and Clarke are assigned to duty in other offices.

The following are employed in the Treasurer's office, but hold their appointments and are paid in other offices:

Name.	Grade.	Residence at the time of appointment.	Time employed.	Amount paid.
John D. Colmesnil	Disbursing clerk	Kentucky	The entire year	$2,000 00
Wm. M. Collom	Clerk	New Jersey	do	1,355 55
B. C. H. Phenix	do	South Carolina	do	1,236 67
S. E. Middleton	do	Washington	do	1,200 00
James M. Parks	do	Alabama	July 9 to Dec. 31	573 82

The clerks and other persons named in the foregoing, as actually employed in this office, were usefully employed in carrying on the operations of last year.

Three of the clerks and the assistant messenger are necessarily and constantly employed in the money room.

Two clerks have special charge of the accounts and payments for the Post Office Department.

The rest are engaged on the transactions of the treasury office proper.

The number cannot well be reduced, for the current work being variable, it is necessary to have force sufficient to dispose of it promptly when it is most pressing.

WM. B. RANDOLPH, *Acting Treasurer.*

TREASURY OF THE UNITED STATES, *February* 7, 1860.

No. 12.

Statement exhibiting the names, compensation, and time employed of the several clerks and messengers in the office of the Commissioner of Customs during the year 1859, *as required by the eleventh section of the act of Congress passed August* 26, 1842, *and resolution of the House of Representatives passed January* 13, 1846.

Names.	Grade.	Time employed.	Annual salary.	Amount paid.	State or Territory of residence at the time appointed.
Thomas Ferran	Chief clerk	From January 1 to December 31, 1859	$2,000 00	$2,000 00	Pennsylvania.

SAM'L INGHAM, *Commissioner of Customs.*

° William Miller, transferred to the office of Secretary of the Treasury.

† Lewis Brand, transferred to the office of Sixth Auditor.

No. 13.

OFFICE OF THE SOLICITOR OF THE TREASURY,
February 3, 1860.

SIR: I have the honor to transmit herewith a statement showing the names of the clerks and other persons employed in this office during the year 1859, the time each of them was so employed, the amount of compensation paid them, and the place of their residence at the time they were severally appointed, prepared in pursuance of the 11th section of the act of Congress approved August 26, 1842, and the resolution of the House of Representatives of January 13, 1846. I have also to say that in my judgment the clerks and other persons named have been usefully employed, that their services cannot be dispensed with without detriment to the public interests, and the despatch of public business does not require the removal of any of them and the appointment of others in their stead.

Very respectfully, your obedient servant,

JUNIUS HILLYER, *Solicitor.*

Hon. HOWELL COBB,
Secretary of the Treasury.

Statement showing the names of the clerks and other persons employed in the office of the Solicitor of the Treasury during the year 1859, *the length of time they were so employed, the compensation paid them, and their place of residence when appointed, as required by the* 11*th section of the act of August* 26, 1842, *and resolution of the House of Representatives of January* 13, 1846.

Persons employed.	Capacity.	Time employed.	Salary per annum.	Amount paid them.	Residence when appointed.
B F. Pleasants	Chief clerk	From January 1 to December 31	$2,000 00	$2,000 00	Kentucky.
L. W. Caldwell	3d class clerk	ditto	1,600 00	1,600 00	South Carolina.
R. J. Lackey	ditto	ditto	1,600 00	1,600 00	Missouri.
W. L. King	ditto	From January 1 to June 30, when he resigned	1,600 00	800 00	District of Columbia.

CONTINGENT EXPENSES, TREASURY DEPARTMENT.

LETTER

FROM

THE SECRETARY OF THE TREASURY,

TRANSMITTING

A statement of the expenditures of the contingent fund of that department for the year 1859.

FEBRUARY 17, 1860.—Laid upon the table, and ordered to be printed.

TREASURY DEPARTMENT, *February* 17, 1860.

SIR: I have the honor to transmit herewith, in compliance with the 20th section of the act of 26th of August, 1842, a detailed statement of the manner in which the contingent fund of this department has been expended from the 30th of June, 1858, to 30th of June, 1859, (marked A,) and of the southeast extension building, (marked B,) together with the statements furnished by the several bureaus of this department, numbered from 1 to 13 inclusive.

I am, very respectfully,

HOWELL COBB,
Secretary of the Treasury.

Hon. WM. PENNINGTON,
Speaker of the House of Representatives.

T. J. D. FULLER, *Second Auditor.*

TREASURY DEPARTMENT, *Second Auditor's Office, February* 17, 1860.

No. 5.

TREASURY DEPARTMENT,
Third Auditor's Office, November 9, 1859.

SIR: I have the honor to transmit to you herewith a statement showing the manner in which the "contingent fund" of the Third Auditor's office has been expended between the 1st July, 1858, and the 30th June, 1859; showing also the names of the persons to whom paid, specifying the particulars, exhibiting the amount remaining unexpended of the appropriation for the fiscal year ending 30th June, 1859; prepared in pursuance of the 20th section of the act of Congress approved 26th August, 1842.

With great respect, your obedient servant,

R. J. ATKINSON, *Auditor.*

Hon. HOWELL COBB,
Secretary of the Treasury.

General statement of the condition of the fund appropriated for the contingent expenses of the office of the Third Auditor of the Treasury Department, in obedience to the provisions of the twentieth section of the act of Congress of August 26, 1842, *for the fiscal year ending June* 30, 1859, *in pursuance of the letter of the Secretary of the Treasury of September* 12, 1854.

State of appropriation.	Amount.	Total.
The balance of appropriation for the fiscal year ending June 30, 1858	$3,540 00	
There was appropriated for the fiscal year ending June 30, 1859, per act June 2, 1858	3,540 00	
		$7,080 00
Between July 1, 1858, and June 30, 1859, there was paid out of said amounts for the necessary objects required for the accommodation of the office and the despatch of public business		1,515 32
Leaving a balance of		5,564 68

CONTINGENT EXPENSES OF THE WAR DEPARTMENT.

LETTER

FROM

THE SECRETARY OF WAR,

TRANSMITTING

A statement of the contingent expenses of the War Department.

FEBRUARY 21, 1860.—Laid upon the table, and ordered to be printed.

WAR DEPARTMENT, *February* 17, 1860.

SIR: In compliance with the twenty-fifth section of the act approved August 26, 1842, I have the honor to transmit herewith a statement of expenditures from the appropriations for contingent expenses of this department during the fiscal year ending June 30, 1859.

Very respectfully, your obedient servant,

JOHN B. FLOYD,
Secretary of War.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 26.

MILITARY ESTABLISHMENT—CONTINGENT EXPENSES.

LETTER

OF

THE SECRETARY OF WAR,

TRANSMITTING

A statement of the contingent expenses of the military establishment.

FEBRUARY 21, 1860.—Laid upon the table, and ordered to be printed.

WAR DEPARTMENT, *February* 17, 1860.

SIR: In conformity with the provisions of the fifth section of the act of March 3, 1809, I have the honor to transmit herewith a statement showing the expenditures from the appropriation for contingent expenses of the military establishment during the year 1859.

Very respectfully, your obedient servant,

JOHN B. FLOYD,
Secretary of War.

HON. WM. PENNINGTON,
Speaker of the House of Representatives.

Statement of the expenditures of the appropriation of the contingent expenses of the military establishment for the year 1859; exhibited in pursuance of the 5th section of the act of March 3, 1809, entitled "An act to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments."

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 26.

MILITARY ESTABLISHMENT—CONTINGENT EXPENSES.

LETTER

OF

THE SECRETARY OF WAR,

TRANSMITTING

A statement of the contingent expenses of the military establishment.

FEBRUARY 21, 1860.—Laid upon the table, and ordered to be printed.

WAR DEPARTMENT, *February* 17, 1860.

SIR: In conformity with the provisions of the fifth section of the act of March 3, 1809, I have the honor to transmit herewith a statement showing the expenditures from the appropriation for contingent expenses of the military establishment during the year 1859.

Very respectfully, your obedient servant,

JOHN B. FLOYD,
Secretary of War.

Hon. WM. PENNINGTON,
Speaker of the House of Representatives.

Statement of the expenditures of the appropriation of the contingent expenses of the military establishment for the year 1859; exhibited in pursuance of the 5th section of the act of March 3, 1809, entitled "An act to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments."

NATIONAL ARMORIES.

LETTER

FROM

THE SECRETARY OF WAR,

TRANSMITTING

A statement of the expenses of the national armories, &c.

FEBRUARY 21, 1860.—Referred to the Committee on Military Affairs, and ordered to be printed.

WAR DEPARTMENT, *February* 11, 1860.

SIR: In compliance with the act of April 2, 1794, I have the honor to transmit herewith a statement exhibiting the expenses of the national armories, and the arms and appendages made thereat, during the year ending June 30, 1859.

Very respectfully, your obedient servant,

JOHN B. FLOYD,
Secretary of War.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

Abstract of the general annual return of the militia of the United States, by States and Territories, according to the act of March, 1803, for the year 1859.

States and Territories.	RETURNS.		INFANTRY.								CAVALRY.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 29.

NORTHERN AND NORTHWESTERN LAKES.

LETTER

FROM

THE SECRETARY OF WAR,

IN

Answer to a resolution of the House requesting the communication of the annual report of Lieutenant Colonel James D. Graham on the harbor improvements for the northern and northwestern lakes.

FEBRUARY 23, 1860.—Laid upon the table and ordered to be printed.

WAR DEPARTMENT, *February* 20, 1860.

SIR: In reply to the resolution of the House of Representatives of the 13th instant, requesting the Secretary of War to communicate "the annual report of Lieutenant Colonel James D. Graham, of the topographical engineer corps, for the year eighteen hundred and fifty-nine, on the harbor improvement for the northern and northwestern lakes," I have the honor to state that the paper referred to is among the documents accompanying the annual report of this department transmitted to both houses with the President's message at the opening of the present Congress, being an appendix to the report of the chief topographical engineer.

Very respectfully, your obedient servant,

JOHN B. FLOYD,
Secretary of War.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 30.

COMMERCE AND FREE TRADE.

MESSAGE

OF THE

PRESIDENT OF THE UNITED STATES,

IN ANSWER TO

A resolution of the House calling for a copy of a letter of the Emperor of France on the subject of Commerce and Free Trade.

FEBRUARY 28, 1860.—Referred to the Committee on Commerce, and ordered to be printed.

To the House of Representatives:

In compliance with the resolution of the House of Representatives of the 16th instant, requesting a copy of a letter of the Emperor of France upon the subject of commerce and free trade, I transmit a report from the Secretary of State, to whom the resolution was referred.

JAMES BUCHANAN.

WASHINGTON, *February* 25, 1860.

DEPARTMENT OF STATE,
Washington, February 25, 1860.

The Secretary of State, to whom was referred the resolution of the House of Representatives of the 16th instant, requesting the President to inform that House "whether a copy of the recent letter of the Emperor of France, upon the subject of commerce and free trade, has been communicated to the Executive by the French government or by our acting minister in France; and, if so, that he transmit to the House a copy of the same, if not incompatible, in his opinion, with the public interest," has the honor to report to the President that the letter of the Emperor of the French referred to in the resolution has not been communicated to the Executive by the government of France, nor has it been officially communicated by the acting chargé d'affaires of the

United States at Paris. With a despatch, however, of the 17th of January last, Mr. Calhoun transmitted, for the information of this department, a printed copy of the Emperor's letter, taken from the Moniteur of the 10th of that month, a translation of which accompanies this report.

Respectfully submitted,

LEW. CASS.

TO THE PRESIDENT.

[Translation.]

The Emperor to the Minister of State.

PALACE OF THE TUILERIES,
January 5, 1860.

MONSIEUR LE MINISTER: Notwithstanding the uncertainty which still prevails on certain points of foreign policy, a pacific solution may be confidently looked for. The time has then come to engage our attention with means to give a vast impulse to the various branches of national wealth.

I place before you, with this object, the basis of a programme of which many parts should receive the approval of the Chambers, and on which you will confer with your colleagues, in order to prepare measures the most efficacious to give an active movement to agriculture, industry, and commerce.

For a long time past the truth has been proclaimed that to render commerce flourishing the means of interchange must be multiplied; that without competition industry remains stationary, and keeps up the high prices which prevent the increase of consumption; that without a prospering industry which draws out capital, agriculture itself continues in its infancy. All, then, are connected with the successive development of the elements of public prosperity.

But the important question is to know within what limits the State should favor these different interests, and what measure of preference should be accorded to each of them.

Thus, before developing our foreign commerce by an interchange of products, we must improve our agriculture, and disembarrass our industry from all the internal drawbacks which reduce it to a condition of inferiority. At present, not only are our principal exports cramped by a number of restrictive regulations, but even the wellbeing of the industrial class is far from having reached that development which has been attained in a neighboring country. There is, then, only one general system of sound political economy which, in creating material wealth, will spread competency among the industrial classes.

In what relates to agriculture, it must be allowed to participate in the benefits of the institutions for advancing moneys on credit to remove forests extending over the plains, to restore the forest growth to the mountain slopes, to apply year by year considerable sums to the great works of drainage, of irrigation, and of clearing off. Such

works, transforming uncultivated communes into tillage lands, will enrich the communes without impoverishing the State, which will be reimbursed for its advances by sales of part of the lands brought into cultivation.

To encourage industrial production, the raw material indispensable to such industry must be freed from all duties; and such industry must be aided, exceptionally and moderately, as agriculture already has been for drainage, by loans of capital which will help it to work the material to perfection.

One of the greatest services to be rendered to the country is to facilitate the transportation of articles of principal necessity to agriculture and to labor. To this end the Minister of Public Works will cause the channels of communication, canals, roads, and railroads, to be completed as soon as possible, especially those intended to carry fossil coal and manures to places where the wants of productive industry call for them; and he will endeavor to reduce the tariffs, by establishing a fair competition between canals and railroads.

The encouragement of commerce by the multiplication of the means for interchange will then follow as a natural consequence of the preceding measures. The gradual reduction of imposts on articles of large consumption will then become a necessity, as well as the substitution of protective duties in place of the system of prohibition which restricts our commercial relations.

By these measures agriculture will find an outlet for its products; manufacturing skill, freed from internal impediments, aided by the government, stimulated by competition, will contend with advantage against foreign productions; and our commerce, instead of languishing, will receive a new impulse.

Desirous, above all, that order be maintained in our finances, observe how, without disturbing their equilibrium, these ameliorations can be obtained.

The conclusion of the peace has permitted us not to exhaust the amount of the loan. There remains a considerable sum disposable, which, combined with other resources, reaches nearly one hundred and sixty millions. In asking the legislative body to authorize the application of this sum to great public works, and dividing it into three annual payments, there would be about fifty millions a year to be added to the considerable sums already carried annually to the budget.

This resource extraordinary will not only facilitate the prompt completion of railroads and canals, of channels of navigation, of roads, of ports, but enable us to rebuild in less time our cathedrals, our churches, and worthily encourage the sciences, literature, and the arts.

To compensate the loss which the treasury would temporarily suffer by the reduction of duties on raw material and on articles of general consumption, our budget offers the resource of amortization, which it will suffice to suspend until the public revenue accruing from the increase of commerce permit the renewed operation of amortization.

Thus, in brief: Suppression of duties on wool and cotton;

Gradual reductions on sugars and coffees;

Amelioration, energetically followed up, of the means of communication;

Reduction of tolls on canals, and, by consequence, general reduction on the cost of transportation;

Loans to agricultural and manufacturing industry;

Extensive works of public utility;

Suppression of prohibitions;

Treaties of commerce with foreign powers.

Such are the general bases of the programme to which I pray you to draw the attention of your colleagues, who should prepare, without delay, the outlines of laws intended to realize it. It will receive, I am firmly convinced, the patriotic support of the Senate and legislative body, emulous to inaugurate with me a new era of peace, and to insure its benefits to France.

For which I pray God have you in his holy keeping.

NAPOLEON.

To the Minister of State.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 31.

COLLECTORS OF CUSTOMS IN ILLINOIS.

LETTER

OF

THE SECRETARY OF THE TREASURY,

IN ANSWER TO

A resolution of the House, calling for information as to whether there be defalcations by collectors of customs in the State of Illinois, &c.

FEBRUARY 28, 1860.—Laid upon the table and ordered to be printed.

TREASURY DEPARTMENT, *February* 24, 1860.

SIR: In reply to the resolution of the House of Representatives of the 16th instant, "That the Secretary of the Treasury be directed to inform this House whether or not there be any defalcations by the collectors of customs in the State of Illinois, in the payment over of government moneys, by them collected; and, if so, to state the names of such officers and the amount of such defalcation," I have the honor to state that this department in not aware of any such defalcations by collectors of customs in the State of Illinois.

I would further state, that the delay in not answering the resolution more promptly was occasioned by an investigation into the accounts of those officers, which has resulted in developing no defalcations on their part.

I have the honor to be, very respectfully, your obedient servant,

HOWELL COBB,
Secretary of the Treasury.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 32.

PASSENGERS ARRIVING IN THE UNITED STATES.

LETTER

OF

THE SECRETARY OF STATE,

COMMUNICATING,

In obedience to law, statements showing the number and designation of passengers arriving in the United States during the year 1859.

FEBRUARY 28, 1860.—Laid upon the table, and ordered to be printed.

DEPARTMENT OF STATE,
Washington, February 25, 1860.

SIR: In compliance with the act of Congress of March 3, 1855, regulating the carriage of passengers in steamships and other vessels, I have the honor to communicate herewith statements of the *number*, *sex*, *age*, and *occupation* of passengers arriving in the United States by sea from foreign countries during the year ending December 31, 1859, together with the *country in which they were born*, the *country in which they mean to reside*, and the *number that died on the voyage*, compiled from returns made to this department by collectors of the customs, pursuant to the provisions of said act.

I have the honor to submit also, herewith, comparative statements showing:

1. The countries in which were born passengers arriving in the United States from foreign countries during each of the last four years;
2. The occupation of passengers arriving in the United States from foreign countries during each of the last four years;
3. The age of passengers arriving in the United States from foreign countries during each of the last four years; and
4. The number of passengers arriving in the United States by sea from foreign countries from September 30, 1843, to December 31, 1859.

I have the honor to be, sir, your obedient servant,

LEWIS CASS,
Secretary of State.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

MISCELLANEOUS CLAIMS PAID AT THE TREASURY.

LETTER

OF THE

SECRETARY OF THE TREASURY,

COMMUNICATING

A statement of miscellaneous claims paid at the treasury for the year 1859.

MARCH 2, 1860.—Laid upon the table and ordered to be printed.

TREASURY DEPARTMENT,
February 29, 1860.

SIR: I have the honor to transmit, herewith, a statement prepared by the Register of the Treasury, of the expenditures of the moneys appropriated for the discharge of miscellaneous claims, not otherwise provided for, and paid at the treasury during the fiscal year ending June 30, 1859, as required by the act of March 3, 1809.

I am, very respectfully,

HOWELL COBB,
Secretary of the Treasury.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 33.

MISCELLANEOUS CLAIMS PAID AT THE TREASURY.

LETTER

OF THE

SECRETARY OF THE TREASURY,

COMMUNICATING

A statement of miscellaneous claims paid at the treasury for the year 1859.

MARCH 2, 1860.—Laid upon the table and ordered to be printed.

TREASURY DEPARTMENT,
February 29, 1860.

SIR: I have the honor to transmit, herewith, a statement prepared by the Register of the Treasury, of the expenditures of the moneys appropriated for the discharge of miscellaneous claims, not otherwise provided for, and paid at the treasury during the fiscal year ending June 30, 1859, as required by the act of March 3, 1809.

I am, very respectfully,

HOWELL COBB,
Secretary of the Treasury.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

been engaged, and which, if carried out, will, in their opinion, effectually relieve the navy yards of all the abuses that have so long existed in them.

Organization of yards defective.

All the troubles in our navy yards are owing to the system on which they are organized, and not owing to a want of proper administrative talents in the heads of departments. We trace the same evils from yard to yard, and although in some they exist only in a minor degree, yet they are inherent in the system of all.

Proper officers should be selected to command yards.

In the inauguration of a new system, much will depend on the persons appointed to carry it out. On the good judgment, activity, and vigilance of the commandants of navy yards, depend the all-important matters of order, efficiency, and economy; and great care should be taken in the selection of officers for these important trusts. *Seniority* does not always insure the proper qualifications for the performance of the duties of commandant, and there is no safe rule but in the appointment of those who are known to possess them fully.

Commandant—his powers and duties.

In the government of a navy yard the commandant should be considered in the same position as if in command of a ship; and all persons employed by the government within its walls should be held to the strict observance of the laws of the navy as applied to yards; and no person should ever be employed who sets those laws at defiance, or refuses to subscribe to a strict enforcement of them to the letter.

Officers' duties to be clearly defined.

It is one of the essential points, and a matter of primary importance, involving the most important interests of the service, that the position of every officer attached to a navy yard should be clearly defined, proper duties assigned to them, and their rights acknowledged by every employé, so as to correct abuses and save the government from fraud. At present the authority of the commandant is extremely limited, and though he has the nominal power of approving of certain appointments and discharging men, yet this authority confers no actual power on him, is not general throughout the yards, and is not sufficient to enable him to correct abuses.

Abuses in the employment of men.

The privilege or authority granted to master workmen of selecting their own mechanics has led them into the error of attempting to govern them independent of the executive authority of the yard, and has been productive of much disorder in many ways, amongst which

is the well established fact of the employment of a much greater number of men than were necessary, and a marked inefficiency in the character of those employed.

Some admissions have been made leading the board to believe that master workmen have been overruled in their convictions of honesty to the government by outside influence, on which depended, as they were made to believe, their own positions and continuation of employment. As long as master workmen are subject to these influences, the evils now existing in our navy yards will continue; and though checked for a time by some temporary order, they will break out on the first favorable opportunity.

Military rule in navy yards recommended.

It is therefore recommended (to insure greater efficiency and economy) that the navy yards be placed at once under strictly military rule, and that the commandant alone be held responsible for the faithful performance of the duties of all those under his command.

Master workmen—how they should be appointed.

That all master workmen shall be nominated by the commandant, and be appointed to office after a strict and careful examination into their moral, physical, and mechanical qualifications; that when they receive a certificate of having passed their examination before two naval and one of the civil officers of the yard, they shall receive an appointment signed by the Secretary of the Navy, which shall continue during good behavior; and no master workman shall be removed except for improper conduct, mal-performance of duty, or a violation of the rules and regulations of the yard.

Master workmen abuse their privileges.

The board believe that the present system of allowing master workmen the sole selection of the men employed under them, without check, is injurious to efficiency and to the military organization of the yard; detracting from the power of the commandant, and making him, in fact, subordinate to the will of the master workmen.

Employment of men—respecting.

Therefore they recommend that it be abolished, and that master workmen be directed to nominate to the commandant, with the sanction of the heads of their respective departments, the men to be employed; and that when any doubt exists as to their efficiency, or the motive which induces their employment, the executive officer, first lieutenant, and one of the chiefs regulating the divisions of labor in the civil department of the yard, shall institute such inquiries into the matter as may be necessary to rectify any abuses before the requisitions are laid before the commandant for his final action.

Register to be kept of persons desiring employment.

It is further recommended that the executive officer of the yard keep a register of all competent persons who desire to receive employment in the several departments, and that when a requisition is made the the number be selected as far as practicable from such lists.

Rules and regulations necessary.

No yard can be efficient unless proper rules and regulations are established, embracing all its departments. It is recommended that this be done as soon as possible, and that internal rules for the better government of each yard be printed, framed, and hung up in all the public offices and work-shops of the yard, as well as at the main entrance, so that no one may plead ignorance thereof; that such regulations be carried out to the letter, and any non-observance of them shall subject the offender to severe reprimand, or dismissal from his position, if the case should require it. These regulations should define as clearly as possible the rank, authority, and duties of each officer, as well as the duties of the heads of different departments. They should also explain what is expected of master workmen and those under them, and regulate the duties of the police of the yard.

Executive officer—his powers and duties.

The executive officer of a yard is the pivot on which the efficiency of the establishment turns; and if an officer is selected for this important duty without a due regard to qualifications necessary for the position, there can be neither harmony, discipline, efficiency or economy. There are elements in the organization of yards requiring tact and good judgment to regulate; and it is recommended that in selecting an officer for this duty, the department be governed by the same rule suggested in the case of commandants; that officers be selected with regard to their peculiar fitness for this duty, whose skill and ability are well known, and who, while possessing firmness of character, should exercise sound judgment in dealing with persons unaccustomed to military discipline.

Peculiar fitness for the duties of executive officer necessary.

It should be the duty of the executive officer to carry out all the orders of the commandant, and see that the rules and regulations of the yard are obeyed. All orders from the commandant should be transmitted through him, and all requisitions for labor or material in any of the departments of the yard should be laid before him before they are sent to the commandant for his approval. He should, in fact, know everything that is going on, and be able to give the commandant full information on all subjects relating to the duties of the yard.

Executive officer should be familiar with everything going on.

The executive officer should, when practicable, go through all the different work-shops daily, and inform himself if the work is being done efficiently and economically; it should be his duty to lay before the commandant at any time, for dismissal, the name of any person who may be found idling his time, or guilty of violating any of the rules of the yard; he should also recommend the reduction of gangs of men, when he may consider they have been too long employed on a job of work.

First lieutenant's duties, &c.

The executive officer should transmit to the first lieutenant such instructions as the wants of the service may require; and the latter officer should exercise a general supervision over all departments of the yard not under the direction of a superior officer, and report all abuses to the executive.

Sailing master—his duties and powers.

The board recommend that the sailing master of the yard have charge of all the laboring gangs which are at present under the charge of the master laborer, and that the office of master laborer be dispensed with; that masters' mates be employed to do the duty of foremen of gangs, who shall receive an addition of ——— cents a day on laborers' pay, and keep the men at work under the direction of the master or other naval officer of the yard. The laboring gangs comprise a large number of men attached, in greater or less force, to every department of the yard, are necessarily much divided, and cannot conveniently or properly be placed under any particular head, but it should be done as far as it can be effected, and the men detailed by requisition of the heads of departments, on the master at morning muster.

Office of master laborer unnecessary.

The office of master laborer has been found to the satisfaction of the board so useless and detrimental to the discipline of the yards that they feel no hesitation in recommending its abolishment. There are one or two cases where master laborers have served faithfully for years, (as in the Washington yard,) and are very useful men. They could receive appointments of masters' mates, and their pay continued to them.

Ordnance officer—his powers, duties, &c.

It should be the duty of the ordnance officer to have charge of all matters appertaining to his department. This branch of duty has grown up of late in the several yards, and the work is conducted more efficiently and economically than it has ever been before. The depart-

ment, however, cannot be considered as complete while any one branch of the duty is carried on under the direction of another person.

Gun-carriage maker should be under ordnance officer.

It is therefore recommended that the gun-carriage maker, now under charge of the constructor, be transferred altogether to the charge of the ordnance officer of the yard.

Steam engineer's department—respecting organization.

The board are of opinion that it would conduce very much towards a military organization, as well as to efficiency and economy, to place a chief naval engineer at the principal yards, in charge of all steam engines in operation and under construction, with all their dependencies, including machinists, plumbers, founders, copper-smiths, armorers, and tinners, making, in fact, one mechanical head for that department, instead of having so many as at present. It is also proposed to substitute foremen for masters in those departments where they now exist.

Warrant officers' berths now filled by civilians.

The board consider it a matter of great importance to the best interests of the service, that every office and duty in the yard be assigned to proper officers of the navy, whenever it may be practicable, or where their duties assimilate to those performed on board ship. There are now persons employed in the yards on large pay, in situations due to meritorious officers. This allusion is more particularly intended for the warrant officers, boatswains, gunners, carpenters, and sailmakers.

This class of officers, after having performed good service at sea, enduring many privations, find themselves in a measure excluded from the privileges enjoyed by most other grades, in the consequence of civilians holding, on shore, situations which ought to be the reward of their services. Independent of its being an act of justice, the board recommend that those positions be filled by warrant officers, on the ground of efficiency and economy.

Police requires re-organizing.

The police of the yards, as now regulated, cannot be said to be as efficient as is required by the large amount of property to be protected, and the board recommend that a thorough re-organization be made in this department, not only in the duties of the watchmen, but in the quality of men to be employed.

Captains of watch—what should be their duties.

It is proposed that there shall be one or more captains of the watch in all yards, whose duty it shall be to make all the details of

watchmen, and carry out such orders as they may receive from the commandant. It should be the duty of the captain of the watch, whose station should be at the main gate, to keep a book in which he should register the names of all persons whatever employed in the yard, who go out of the gate or enter it during working hours, noting in a column for that purpose the time any person may have been absent from the yard; and the captain of the watch is to lay the book referred to on the desk of the executive officer every morning at eight o'clock; and it shall then be his duty to report all irregularities to the commandant of the yard. The watchmen should be divided into sub-officers, who shall have a certain amount of authority under the captains of the watch, and take their places during sickness or suspension from duty, but on ordinary occasions they are to perform their tour of duty like other workmen. In a navy yard where there is more than one gate watchmen should be instructed to allow no master or other workman to pass out or in during working hours except at the main gate, whilst employed in the yard.

Watchmen to make arrests.

To enable the watchmen to make arrests, it is recommended that wherever it can be done, no person receive the appointment of watchman who has not also received the appointment of deputy outside the yard, in case of trespassers escaping through the gate or over the walls.

Watchmen should be uniformed.

To make the office of watchman more imposing, it is recommended that a uniform be substituted for the incongruous dress now worn, the uniform to consist of a blue frock coat and pants with watchmen's buttons on the breast, and a watch cloak of uniform pattern for cold or rainy weather; they should wear a uniform cloth cap with brass numbers for watchmen and plated letters for the captain designating their rank. Added to this the captains of watch should wear a brass star on the right breast and the watchmen a brass star on the left breast.

Watchmen—how to be mustered.

It should be the custom when watchmen are going to their different beats to march there in squads, using as much military form as may make their force imposing without actually making them a military party; besides this the watchmen should be provided with arms suitable for day and for night.

Naval constructor—his powers and duties.

The office of naval constructor of the yard is a very important one, and he should be entitled to all due consideration to enable him to perform efficiently the duties he is to preside over. He cannot be

sightly and offensive privies, placed, at some of the yards, in conspicuous and remote places.

Master workmen—what should be required of them.

It should be the duty of the master workmen, after the men have been mustered, to see that they go promptly to their work, and that they do not leave until bell-ring. They should set a good example themselves, both in going promptly to their work and not leaving until the last moment.

Master workmen should be held strictly responsible for the efficiency of their departments; should hold themselves ready at all times to give the executive officer all the information he may require, and report when a job of work commences and when it is finished.

Useless offices should be abolished.

It is desirable, whenever the interests of the service will admit of it, to do away with such master workmen as can be spared, and have their places filled by foremen. In some yards it would be well to do away with certain offices altogether; for instance, in the Norfolk yard there is a master house, and a master ship joiner, one of which, it is satisfactorily proved to the board should be abolished.

There are now employed in the navy yards, at—

New York,	one	master	blockmaker	and	29	men.
Boston,	"	"	"	"	"	23	"
Norfolk,	"	"	"	"	"	18	"
Philadelphia,	"	"	"	"	"	21	"
Washington,	"	"	"	"	"	7	"

Blocks should be made only at Boston and Norfolk.

It is recommended that all the blockmaking establishments be suspended, excepting in Boston and in Norfolk; the expenses incurred in these departments anually amount to $62,000 for labor alone, and it is firmly believed that a saving of $30,000 annually will be thereby effected.

Discharging men—a fixed rule should be adopted.

In discharging men, some rule should be adopted by which less discretion should be left to master workmen. At present, as appears on evidence, the master workmen are unwilling to recommend discharges, and frequently keep men on longer than is necessary, owing to a discretion being left to them as to who shall and who shall not be discharged. It is therefore suggested, that the gangs shall at all times be kept at the lowest possible number, so as to insure, as near as can be, a continuous and steady work. The constant expansion and contraction of working gangs is extremely injurious, and affords an excuse for multiplying the number of men.

Its advantages.

It is recommended, therefore, that the discharges commence, in all cases, with the men last taken on; this, it is believed, will put a stop to a very great abuse, that of keeping men employed after there is no further necessity for their services; for, as the selection for discharge will not depend on the master workmen, and is but the effect of a certain rule, they will not hesitate to perform their duty, being relieved from the odium of making a discrimination.

This arrangement will also secure to the government the services of the best workmen, those at the top of the list, who have been longer employed, and who would naturally be more conversant with the manner of doing the government work, and feel more identified with the yard.

Concluding recommendations, &c.

In making the above recommendations and suggestions, the board have confined themselves to the observation of facts that have come within their knowledge, and they firmly believe that if their recommendations are adopted and strictly carried out by the commmandants, the best military organization will be introduced into all our yards, making these establishments models of efficiency and economy.

Accompanying papers referred to.

We transmit herewith documents numbered from one to six, inclusive, being records of evidence taken in the navy yards at New York, Norfolk, Philadelphia, Boston, Portsmouth, N. H., and Washington, in the order in which they were examined, together with a special report on each yard; to which is annexed a schedule of master workmen, clerks, and others, which the board recommend should be employed.

All of which is most respectfully submitted, and we have the honor to be, your obedient servants,

F. H. GREGORY, *Senior Officer.*
G. J. VAN BRUNT, *Captain.*
C. H. POOR, *Comdr. U. S. N.*
JAC. R. TUCKER, *Comdr. U. S. N.*
DAVID D. PORTER, *Lieutenant.*

Hon. ISAAC TOUCEY, *Secretary of the Navy.*

No. 1.

NAVY YARD, NEW YORK.

WASHINGTON, D. C., *June* 20, 1859.

SIR: In obedience to your order of the 1st April, 1859, the board of officers, as directed, commenced investigations at the navy yard, New York, and have now the honor to make an especial report on that yard.

Regulations of the yard.

As no navy yard can be efficient in all its departments without a good set of regulations, the board deemed it their duty to examine critically into the regulations of this yard, drawn up by Commodore Breese, in December, 1858, a copy of which is attached to the appendix.

These regulations the board consider defective, inasmuch as they do not go sufficiently into the details of duties belonging to the different departments of the yard; they do not define sufficiently the military authority of the yard, and they are liable to be altered at the option of a new commandant. The regulations are also defective in not pointing out the rights and privileges of the several departments, and the relative position to be occupied by each one in the performance of any duty within the jurisdiction of the yard.

The commandant of a navy yard should be invested with full powers, so that every subject that might be made a matter of dispute could be regulated on the spot, and the numerous appeals to the Secretary of the Navy be prevented; but the board do not find that the commandant of the New York yard possesses that authority which properly belongs to his position; for, though he actually approves all the acts of the several departments, his approval is a mere form, and his duties as an officer have become so restricted of late years that he cannot prevent any of those abuses which have so much increased the expenses of our navy yards; any attempt to curtail which has resulted in the discomfiture of the commandant, or his representative the executive officer, to whom he has delegated his authority.

Commandant—his allowances, clerks, &c.

For the purpose of enabling the commandant to perform all the duties required of him in his official correspondence, the board recommend that there be allowed in his office the following clerks and assistants: one secretary, at $1,200; one second clerk, at $960; one porter, at $456; and one office messenger, at $391.

The board find that there are now employed one or two writers beyond the number above enumerated, and are of the opinion that they are unnecessary.

Officers' quarters abuses.

The board felt it their duty to inquire if there were any abuses connected with officers' quarters, and cannot say they have discovered any, unless it be an abuse for the commandant to have a garden and an assistant to work in his garden inside of the yard, and keep the extensive public grounds attached to his quarters in proper order.

The board are not aware that there is any authority beyond that of the commandant for the employment of these persons. It is a practice that has existed since the navy-yards were first established, and no doubt has been approved of by some former Secretary of the Navy. It

is very certain that the commandant could not afford to remunerate men himself for keeping the public grounds in order; and in consideration of this fact the board are of opinion that the persons alluded to are necessary; at the same time they are of opinion that no commandant should employ more than the number now in use at the New York yard, who should only be permitted to work in the garden and about the public grounds, and never be employed in any domestic duty.

Boat recommended.

The commandant should, for official reasons, always have a barge at his disposal, and it is recommended that a good boat be kept ready at all times for his use on board the receiving ship, and to be manned by sailors from that vessel; and even though the boat may not be wanted by the commandant, it should at all times be kept ready for service, in case it was required to make an official visit to a foreign vessel of war.

Executive officer—his duties, &c.

The board have received much assistance from the executive officer of this yard in ferreting out abuses, and suggesting remedies. The duties of this officer have been very onerous, owing to several departments in the yard not acknowledging his authority, and rendering it extremely difficult for him to perform his proper duties without embarrassment; called upon, as he may be at any moment, and as he frequently is, to assume all the duties of commandant for an indefinite period, he should at all times be made acquainted with every matter of practical duty in all the departments of the yard, and is expected by the present regulations to be thoroughly posted up in every thing relating to the duties going on.

Executive officer—his power, &c.

To enable him to comply with the regulations, he should have all requisitions for labor or material pass through his office; he should at all times have authority to correct any abuses, or make any inquiries relating to the public service that he may think proper to institute; but the executive officer of this yard, independent of his own resources for keeping up discipline, has been almost ignored by all the subordinate departments, who should look to him only as the organ of the commandant, for orders or instructions, and should consult with him freely on all matters relating to the public duty.

Present executive officer very energetic.

Credit is due to the executive officer of this yard, Commander Foote, for his indefatigable endeavors to carry out the regulations in the different departments, and to maintain discipline throughout this large establishment. He has exhibited considerable tact and ability in re-

gulating the insubordinate spirits who have heretofore set all rules of order at defiance, under the impression that the military authority was but nominal, and that their offices were created for the benefit of an outside influence—an influence extremely detrimental to the interests of the government.

It has long been the custom for the master workmen, and others belonging to the yard, to leave their post without permission, and whenever it suited their convenience to do so; but this irregularity was checked by the executive's placing a porter at the main gate, (with the commandant's sanction,) whose duty it was to note on a pass-book every one attached to the yard who entered or left under any pretence.

This precaution has effectually remedied one of the greatest evils existing in the yard; for heretofore almost any one could absent himself the moment the muster was over, and it is a well established fact that *some* of the master workmen spent much of their time, during working hours, outside of the yard. But for the circular of the 14th December, 1858, issued by the Secretary of the Navy, strengthening the authority of the commandant, the executive officer would not have felt himself strong enough in authority to have carried out the above regulation.

First Lieutenant—his duties.

The first lieutenant of the New York yard is at present partly performing the duties of executive officer, and at all times is employed in carrying out his orders. The duties are generally very onerous, and no further obstacles should be thrown in the way of the performance of them. To enable him to attend to the duty of hauling ships, he has to call upon the master laborer of the yard for men, without having the authority to select such persons as he may deem efficient. The master laborer of this yard has claimed the same privileges as enjoyed by other master workmen, and only employs such men as *he may* think suitable, and the first lieutenant is, in consequence, hampered in the performance of his duty. He should be expected to go through all the shops of the yard daily, and report if the workmen do not attend to their duty; but the first lieutenant, even if invested with any such authority, could not exercise it, owing to the insubordinate condition of the different departments of the yard, at the head of which are the master workmen, who do not acknowledge the right of the first lieutenant to interfere with any of the abuses in their departments.

The duty of the first lieutenant should be to detail the workmen connected with the work on the ships or about the yard, and to regulate them, independent of any person excepting his superior officer. There is a great deal of loading and unloading of ships, handling of anchors, guns, ropes, provisions, &c., in the New York yard, all of which should be superintended by the first lieutenant. His duties should be general, under the immediate direction of the executive officer of the yard

Master—his powers, duties, &c.

The master of the yard has the general supervision of the yard laborers. It has been the custom heretofore to appoint a 2d lieutenant to perform the duty now performed by the master. Some inconvenience has been felt on account of the withdrawal of one or two old masters from the yard. Having been employed many years in one capacity, they became conversant with certain duties not familiar to a person who has had little experience at navy yards.

An old and valuable officer (in his line) has lately been attached to the New York yard as sailing master, and it is recommended by the board that his present duty may become permanent. They also recommend that he shall take charge of all the yard laborers proper, holding the same relation to them as is now held by the master laborer, and the authority of the latter should be taken away, if the useless office be not abolished altogether.

Master laborers.

There could not possibly be a more useless office than that of master laborer, as it is at present regulated in the navy yard at New York. It is a well known fact that the present incumbent has taken on worthless and inefficient men, and in certain cases so many were employed that it added very much to the expenses of the yard without any commensurate advantage.

There is a certain amount of patronage attached to the position of master laborer of the New York yard, which it will be found impossible to break up without abolishing the office altogether, and the board unhesitatingly recommend that this be done as soon as possible. Independent of the many ill effects caused by taking on so many inefficient persons, the master laborer is very insubordinate and inattentive to the orders he receives from his superiors, arrogating to himself an authority which he is not justified in exercising under any circumstances whatever.

Master laborers can be dispensed with.

The duty now assigned to the master laborer would be much better performed by the sailing master of the yard, and executed with a faithfulness seldom to be met with amongst such persons as would seek a master laborer's berth, who had no stimulus (beyond the gains of the office) to make them faithful to the government.

Ordnance officer—his duties, how performed.

The ordnance department of this yard is in this good condition; everything bears the character of efficiency. The work heretofore done by contract is now being done by men in the ordnance department under the immediate supervision of the ordnance officer, and is of much better quality than that heretofore supplied to ships. The

organization of this department is entirely military, and good order and harmony reigns throughout. No complaints are made by the officers against the men, and the commandant of the yard is satisfied with the manner in which the duty is generally performed. The efficient state of this department affords an argument to the board for the establishment of a like discipline in all the departments of the yard. The ordnance buildings are sufficiently large for all the purposes of fitting out required in our small navy, and the board would suggest that no further addition be made to it.

Inspector of provisions—duties, how performed.

The office of inspector of provisions, clothing, &c., under the superintendence of a purser in the navy, is in excellent condition. Its duties are apparently performed promptly, efficiently, and as economically as their magnitude and importance would admit. There are twenty-three persons employed (including the superintendent,) all of whom appear to be necessary, and rated by proper authority. The mills for the preparation of coffee, pepper, mustard, &c., for the whole service, necessarily increase the number of persons employed beyond other stations where only the ordinary duties common to all are required. Every thing in and about this department gives evidence of great industry, attention, and care; affording another strong proof of the efficiency of a department when regulated by good military rule.

Naval engineer—those under him.

The naval engineer has under his charge all the steam engines in the yard, the machine shop, foundry, boiler-shop, pattern-shop, oakum factory, and plumber's department. He has four master workmen under him, but is of opinion that foremen could perform the duties just as well, provided they were nominated by the engineer, by and with the approbation of the commandant. Bringing these departments all together under one mechanical head, (which the engineer is,) much simplifies the duties and fixes the responsibility on one person, instead of dividing it amongst a number. The engineer testifies that no master workman can perform these duties properly while enjoying a position independent of the naval rules and regulations; and he finds that now he cannot control the expenditures or regulate the number of men employed, until the present system is altered, and the authority of master workmen is modified.

Engineers should be head of the department.

The plan of placing a naval engineer at the head of the abovementioned department, seems to work well in this yard, and though he has not the immediate control in the selection of the men, yet the requisitions go through him, and he can bring to the notice of the commandant any improper person whose name may be sent to him. The naval engineer is strongly in favor of abolishing all the master

workmen in his department, or to reduce their authority; he deposes to having been threatened by them that they would bring political influence against him, when he objected to having a foreman forced on his department, which objection was concurred in by the commandant.

At present the department of naval engineer is not thoroughly organized; he has entirely too many men employed, owing to his having no authority to interfere with the selection or discharge of men, in consequence of which many persons under him are entirely incompetent to perform their duties. He complains of abuses in his department, but was not prepared to state what they were, beyond the fact that the men do not attend to their duty. The only remedy for this is an entire re-organigation of the department of naval engineers, giving him full power to recommend the removal of such persons as he may deem unnecessary. In one instance there is a person (Mr. Farron) employed at a salary of $1,500 per annum to take care of and run the engine for pumping out the dry-dock, which duty can be performed by any one appointed temporarily, as the engine is seldom in motion.

Naval engineer allowances.

The following allowances are recommended in the above department, if the present system is continued, and should not be deviated from, unless sanctioned by authority of the commandant.

One naval chief engineer; one writer, at $2 50 per day; one draughtsman, at $2 90 per day; one assistant, at $2 per day.

Engineers.—One master, at $2 75 per day; two engineers, at $2 per day; two do., at $1 75 per day; five firemen, each $1 25 per day.

Machinists.—One master, at $1,500 per annum; one foreman, at 3 per day; three apprentices, at $1 12 per day.

Boiler-maker.—One foreman, $3 per day; one quarterman, $2 25 per day.

Pattern-makers.—One foreman, $3 per day; one quarterman, $2 per day.

Oakum-maker.—One foreman, $3 per day.

Founders.—One foreman, $3 per day; one quarterman, $2 25 per day.

Plumbers.—One foreman, $3 per day; one apprentice, $1 12 per day.

No minors to be allowed in any of the above departments.

The board are of opinion that many more men are employed in the above departments than are necessary; and, as they could not be expected to obtain accurate information on the subject, they recommend that the commandant of the yard institute rigid inquiries into the matter, appointing his executive and other officers to investigate into the number of men employed in each shop, and recommend what reduction may seem to them advisable. When once the number is reduced, it should be kept within proper limits by the commandant himself.

accounts; and be allowed one writer, at two dollars per day, to post up his books.

The office of master cooper in this yard should be abolished, and one foreman of coopers appointed, at a rate of twenty-five per cent. advance on the pay of first class workmen. The small number of men employed in the cooper's shop at New York navy yard does not justify the employment of a master cooper.

Civil engineer—his duties, how performed.

The board have found the civil engineer's department in a completely disorganized state, and apparently independent of any military authority. There is a total want of harmony throughout the department. The engineer and his assistant appear to be in a state of undisguised hostility to each other, and, owing to these dissensions, the public duty has been wretchedly performed. Abuses of a very grave character appear to have existed and still do exist, and will likely continue until a thorough reform is made throughout the department.

Civil engineer's assistant—his duties assigned to another.

In the first place, the assistant engineer, appointed by the Secretary of the Navy, and bearing the character of a very efficient officer, has been entirely ignored by the civil engineer; his duties taken from him and transferred to the draughtsman, increasing thereby the expenses of this department, and rendering it necessary to employ other persons to perform the duties of draughtsmen. In the absence of the chief engineer the assistant assumes by right the superintendence of the work going on, which, in the opinion of the board, is a proof of his competency.

In consequence of the assistant engineer being kept in a subordinate position to that to which his duties called him, it became necessary to employ two additional persons to act as draughtsmen.

Civil engineer's department—abuses, &c.

It appears from the evidence of the chief engineer, the assistant engineer, and draughtsman, that great abuses have existed in the engineer's department in consequence of inefficient persons being forced on them by ouside political influence; and the chief asserts that this pressure was so great that he was obliged to yield to it. Here, now, is an example of the necessity of every officer in the yard being independent of political influence, and amenable only to the rules and regulations of the navy. Had the engineer been in an independent position he would, without doubt, have repelled indignantly any attempt to coerce him in employing incompetent persons. Under any circumstances it is a fraud upon the government, which, if continued, would in the end make our navy yards mere political hotbeds, and would finally lead to their abolishment. The assistants of the chief engineer, according to the pay-roll, are as follows, viz:

Civil engineer—his allowance, &c.

	Per annum.
ne chief engineer	$2,000
ne assistant engineer	1,500
ne draughtsman	900
wo writers, at $2 50 per day	1,500
ne diver, doing duty of clerk, at $2 50 per day	780
ne laborer, (office man,) at $1 12 per day, say	350
Total	7,030

The writers have been falsely rated and returned on the pay-rolls; ne as a diver, the other as a machinist. Other exceptionable ratings ave been made in this department, three inspectors of gravel amongst hem.

Civil engineer and assistant—both not necessary.

The chief engineer, when questioned whether the office of engineer nd assistant were both necessary, answered that they were not; and he assistant engineer concurs in the same opinion. In the opinion f the board, the number of persons employed is entirely too large; nd the abuses generally in this department have been so manifest nd great that the board have no hesitation in recommending its reor- anization, for the present on a reduced scale, commensurate with the resent requirements of the service. There is no necessity now, nor s there likely to be, for a large engineers' establishment in the New ork yard. The board therefore recommend that a head be appointed s a constructing engineer, with the medium salary of the two now mployed, $1,750 per annum; one draughtsman, at $900 per annum; ne clerk, at $750 per annum; and one office attendant, at $1 25 per iem; the draughtsman and clerk to perform all the duties of the ffice. Here at once would be a saving of $3,280 per annum.

Civil engineer—present incumbent deprecates existing abuses.

In the appointment of civil engineer at this yard, it appears that ie present incumbent received his appointment through the influence f political friends, to whom he felt bound to afford assistance during late political contest. The board, though, feel bound to say that ie engineer strongly deprecated any such practice, and earnestly xpressed a desire to see the yard under a stronger military organiza- ion; having been educated in the naval service, he is fully aware of, nd ready to subscribe to, the importance of having the strictest sub- rdination kept up in every department of the yard. He admits that his only can be done by placing the power of selecting men in the ands of the naval authority of the yard. "Officers are independent f any political influence, are amenable to a court martial in case of ny abuse of authority, and can be removed at a moment's notice, at he mere option of the Secretary of the Navy."

Civil engineer—his mode of employing men reprehensible.

The engineer has rendered himself very liable to censure for the course he has pursued in permitting the number of men in his department to be increased for political purposes. His conduct in this respect offers a strong argument in favor of depriving any future engineer of the power to do harm in that respect.

Naval storekeeper—his duties and responsibilities.

The office of naval storekeeper is supposed to be one of great responsibility, more so than any office attached to the yard. The storekeeper is obliged to give heavy bonds for the security of the government property under his charge, and is allowed to have the appointment of all his assistants. Formerly the responsibilities were really of some importance, but since the establishment of a department of provisions and clothing under a purser in the navy, and an ordnance department under a naval officer, the storekeeper has been relieved of a large amount of responsibility, over a million's worth of property having been taken from his charge and transferred to the above-mentioned department. In consequence, the amount of property under the storekeeper's charge is very small, compared with the importance with which the office seems to be invested.

Presuming that the storekeeper's responsibilities are as great as they are supposed to be, it would naturally follow that the incumbent should be selected for the knowledge of the business he presides over, and the fear of involving himself in pecuniary difficulties would prevent his allowing his duties to be performed altogether by his subordinate clerks.

Storekeeper neglects his office, &c.

The board do not find this to be the case with respect to the storekeeper in the New York yard. Whatever may be his capacity to serve the government, he has given very little proof of it in the administration of the affairs of his office. The duties of storekeeper are performed almost entirely by the head clerk, the storekeeper himself being engaged in other business too important to be neglected for any duty he may owe the government. He seldom visits the yard, and then only when it suits his convenience, and does not seem to recognize the military rules of the yard. The storekeeper gives as a reason for his non-attendance, that the duties are so simple that they can be carried on by a clerk; that his absence is not at all felt, and that in fact he has only a nominal supervision, which he exercises only when it would not interfere with his private business, which he considers of more importance than the trust confided to him by the government; indeed, he takes the ground that when he accepted the office of naval storekeeper, it was not expected of him by the government that he would conduct the affairs of the office otherwise than he has done; that he accepted it with reluctance, and with the express understanding that it would not require his personal attendance.

Storekeeper's views as to his duties, &c.

Whatever understanding Mr. Herrick may have had from other quarters, the board are of opinion that the care and supervision of the public property under his charge requires his constant attention. It not unfrequently happens that the commandant requires information relating to public matters in the storekeeper's department, which he can only obtain by sending an official communication a long distance to the storekeeper's house in New York. This occasions delay, frequently detrimental to the public interests, and imposes an onerous correspondence on the commandant of the yard, from which he should be exempt by right of his position.

Office of storekeeper, as at present constituted, should be abolished.

Mr. Herrick was questioned particularly by the board whether any great business qualifications were necessary to enable any one to perform the duties of naval storekeeper, and the answer was, "none at all," and that "any one in one week could make himself familiar with all that was going on." This, in the opinion of the board, is one of the strongest arguments in favor of abolishing the office of storekeeper at New York altogether. The duties heretofore performed by the storekeeper have been divided between the separate departments, the least valuable part of the property being left in the hands of the storekeeper. If the duties are so simple (as represented by Mr. Herrick) that they can be performed by a clerk, there is no necessity for a storekeeper with a large salary, whose principal time is occupied in attending to his own affairs.

Office of storekeeper—reorganization recommended.

When the office of storekeeper was first established, persons were selected for storekeeper either as a reward of merit, or for their peculiar fitness for the duties, and they were allowed to remain there as long as they were faithful to the government. This state of things no longer exists—the office has degenerated into a reward for political services, which perhaps arises as much from its uselessness as from any other cause. In view of its being not absolutely necessary, the board recommend its reorganization on a new plan, which will be touched on hereafter. Great dissatisfaction has been given of late years about the manner in which the duties of storekeeper have been conducted in the New York yard, and its inefficiency is made more apparent by the manner in which the duties of the department of provisions and clothing, and ordnance department are carried on, both of which were attached to the office of the navy storekeeper.

Benefits of having the office of storekeeper filled by a naval officer.

The board have been very much strengthened in their opinion on this subject by information received from all quarters in the yard, as well

as by their personal observation. The pay is not sufficient inducement for any one with an important business to undertake the affairs of the office. The installation of some naval officer already receiving pay from the government, and directly under the control of the commandant, would tend to increase the military organization of the yard, and relieve the government from those numerous applications for this small office, which must be so annoying. At present the office is sought after with the avowed determination of giving its duties no more attention than suits the convenience of the incumbent. The testimony of Commodore Breese and others, and the admissions of Mr. Herrick and his chief clerk, justify the board in coming to the above conclusion.

Storekeeper's employés—number, pay, &c.

The number of employés in the storekeeper's department is much larger than is necessary, consisting at present of—

One chief clerk at $1,200 per annum; one second clerk at $900 per annum; two writers ($2 per day each) $626 per annum; one person at $1 50 per day, and one at $1 25 per day; and fifteen other persons in and about the office and store-houses, amounting in all to $10,080 75 per annum. In place of the number of persons now employed, the board recommend that a reduction be made as follows, viz:

One chief clerk at $1,200 per annum; one second clerk at $900 per annum; one writer (at $2 per day) $626 per annum; one receiver (at $2 per day) $626 per annum; total $3,352—making a difference in the expenses of this office of $6,728 75. In this estimate is not included the number of men employed to handle stores, which arrangement should be broken up, and the men provided by requisitions on the executive officer of the yard, who could inform himself if they were required or not.

The buildings now occupied by stores are scattered about the yard, and it would conduce very much to economy to have the public property placed in buildings close to each other and near the water.

Clerk of yard—duties, how performed.

The duties of clerk of the yard and mustering officer seem to have been well performed as far as the present incumbent can control them; the system is all wrong, and subject to great abuses. Much of the duties of the clerk have been discharged by irresponsible persons beyond his immediate supervision, in places distant from the mustering office, and the abuse will continue to increase until the loose manner of mustering men in the different parts of the yard is abandoned. The custom now is to muster the men at two points at the mustering office, and in the different shops—the names being called off by the writers of the constructor or some other irresponsible persons for the purpose of getting the men sooner at their work; but, owing to the abuses this plan is subject to, the board recommend that it be abandoned, and that the muster be made at the proper office in presence of one or more of the commissioned officers who are attached to the yard, and the muster stations should not be more than two. It is also recommended that

ıe master workmen and warrant officers shall also be obliged to at-
ɜnd all musters, and be reported by the clerk when they are not
resent ; and they should be obliged to stand by with a check-book
nd check off their own men, in company with the clerk or his as-
stant.

Should it be necessary, on account of numbers, to divide the men,
ıe clerk of the yard should alternately muster either division to see
ıat no fraud is committed. There should also be a standing order
ıat no person be exempt from muster unless by the written order of
ıe commandant of the yard.

Muster—detail of, laborers, &c.

It should also be the rule that the first or second lieutenant, in
is absence, require all requisitions for details of yard-laborers to be
ıade on him at the mustering office, and he should previously inform
imself, so that the detail might be made promptly and the men sent
ff to their work as expeditiously as possible. It should also be the
uty of the officer attending the muster to make a tour of the yard
s soon after muster as possible to see that the men do not idle away
ıeir time on the road.

Master workmen should not absent themselves.

It is now (or was until the order of 14th December, 1858,) the practice
f master workmen to come into the yard from fifty to sixty minutes
fter bell-ring, and to leave from twenty-five to thirty minutes before;
ıis custom prevailed while the board were in session at this yard,
nd they had ocular proof that the men left their work long before
ell-ring. This custom has arisen from the fact that smiths and
ainters have been excused ten minutes for the purpose of allowing
ıem time to wash themselves, and the other shops in the yard have
nally fallen into the same practice, and will continue to follow it
ntil it is strictly forbidden for any one to leave the shops or work
ntil the tap of the bell. The master workmen should stay until the
ıst moment to keep the men at work, and see the fires secure before
ıey leave the yard.

Muster—abuses in.

In mustering the men, the clerk should oblige every one to pass
ght in front of him, and endeavor to make himself familiar with their
ıces, so as to avoid a chance of being imposed on by one person an-
wering for another.

It is sometimes the custom for the clerk of this yard to countersign
ıecks given to the men by the master workmen. This practice should
ɜ broken up, and no one should be allowed to be passed outside
ɔr any cause, unless his check is countersigned by an officer of the
avy attached to the yard.

The present clerk is efficient and trustworthy, and has performed
is duties for many years to the satisfaction of the officers who have

commanded the yard; and if his department is properly organized, there will be no likelihood of any fraud being committed in the mustering of men.

Organization of yard.

The organization of this yard cannot be said to be good while conducted on the present plan. Though nominally a naval establishment, and intended entirely for naval purposes, the real authority is not invested in the hands of the proper persons. In almost every department of the yard under charge of master workmen and other civilians, there are many more men employed than are absolutely necessary, and the naval officers of the yard have not the power to arrest the evil. In every department conducted by a naval officer, and more under the immediate control of the commandant, there is little or no trouble, and everything is conducted with a due regard to efficiency and economy.

Employment of men—abuses in.

It has been proved by the evidence before the board that in every department under the charge of master workmen, men have been taken on when not required, and their mechanical qualifications even not taken into consideration as much as their political proclivities.

Great efforts have been made by the military authority to keep matters in a proper condition, but no commandant can exercise an immediate control unless his order shall be sustained by higher authority; and he feels that his just decisions will not be set aside by the representation of a master workman or a foreman, who, in fact, holds a very subordinate position on the rolls of the yard.

Officers—their efforts to correct abuses.

The officers in the New York yard are at this moment straining every nerve to make all the departments efficient, and establish a proper amount of responsibility wherever there may be any deficiency. They are aided only in a measure by the master workmen, who, not feeling secure in their positions, incline to lean to their patrons who hold high political appointments, and would, if permitted, ignore the naval authority altogether. This state of things does not arise from any moral defect in the character of the master workmen, who are, with few exceptions, excellent men and good mechanics; but they, one and all, testify that they had to trim their sails to the political breeze for fear of having some one put in their places who would be more pliable to the requests or commands of outside influence.

Regulations of the yard cannot be enforced under the present system.

The regulations of the yard are good, so far as they go, but they can never be carried out until every employé is made to feel that the commandant is the only person responsible to the government for

every duty going on. It has been the custom in this yard for almost every master workman to employ one or more persons, rated as laborers or mechanics, to perform clerical duties, and this abuse costs many thousand dollars a year. The board recommend that every person so employed shall be dispensed with, and not allowed in any department without authority of the commandant, who shall fully satisfy himself of the necessity of such writers before he approves the requisition.

Fire department—its condition, &c.

In the organization of the yard is included the fire department, which was turned out and exercised, and found to be in very fair order; when properly exercised it will be very efficient. It has only been within the last few months that fire bills have been made out at this yard, and the men stationed at the different engines. A good fire department is a very important institution in a navy yard, where so much property is at stake; and it is recommended that the fire department in this yard be improved by an addition of two new engines of the most approved plan, with sufficient hose to reach any part of the yard where fire may be likely to occur.

Public property—its protection, &c.

The public property seems to be kept in a good state of preservation, and the general appearance of the yard is good. There seems to be sufficient number of buildings now up and in progress for all the requirements of the navy, and it is recommended when those new buildings are finished that no more be erected. It is to the interest of the civil engineer to keep as many works going on as possible, that the necessity for their employment may be made apparent. One-half of the money appropriated for the navy is expended on useless buildings and other works, which, if built by a private individual, would not have cost near so much.

Yard encumbered with material.

There is a great deal of stone material scattered about, very much impeding the work, and impairing the general efficiency of the yard. This has occurred owing to the contractors being allowed to force the material on the yard sooner than it was wanted. Independent of the inconvenience arising from lumbering up the yard, a very great expense is incurred in moving the material from place to place to make room for other work which may be important. Thousands of dollars are expended in this way, and the abuse offers a plausible excuse to civil engineers to crowd the yard with men whose services could well be dispensed with.

Ordinary men recommended.

There are no ordinary men attached to this yard, and the duty of taking care of the ships in ordinary devolves on the receiving ship.

A small corps of about thirty shipped men, with the rates of seamen, ordinary seamen, and landsmen, to live in the yard under the master's direction, and to be employed in clearing up, stowing and mooring ships, attending to the public grounds, and other general duties, would be much more effective and economical than the daily laborers now employed on such service; besides, a body of men so employed would be a safeguard always at hand in case of fire or other emergencies, and could be made to act as attendants and runners at the various offices. The wages, including rations, would be little more than one-half of what they now are.

Master's mates recommended.

In addition to the officers now attached to the yard, it is recommended that two master's mates be appointed to act under the master, lead the ordinary yard men, and perform general duties; to wear the uniform, and be subject to all the rules and regulations of the navy.

Master should live in the yard.

It is very important that the master of the New York navy yard should be obliged to live inside of the yard, for the purpose of maintaining discipline, and looking out for the preservation of the public property.

It is, therefore, recommended that he be provided with quarters.

Officers of the yard should be sustained.

In conclusion, the board would beg leave to recommend that the efforts now being made by the officers in the New York navy yard to maintain discipline, introduce economy and efficiency, and break up the system of political patronage, be sustained by the head of the department. They are convinced that no navy yard can be made efficient, or to serve the purposes for which it was intended, unless the commandant of the yard is supported in the exercise of his legitimate authority, and the minor departments are held strictly responsible, and the heads of them liable to dismissal for any act subversive of the discipline by which our naval establishments should be governed.

Annexed is a schedule of the persons which the board recommend to be employed, in addition to those mentioned in the constructor's, civil engineer's, steam engineer's, and store-keeper's department, before enumerated.

We have the honor to be, very respectfully, your obedient servants,

F. H. GREGORY, *Senior officer.*
G. J. VAN BRUNT, *Captain U. S. Navy.*
C. H. POOR, *Com'r U. S. Navy.*
JOHN R. TUCKER, *Com'r U. S. Navy.*
DAVID D. PORTER, *Lieutenant.*

Hon. ISAAC TOUCEY,
Secretary of the Navy.

Schedule of allowances for the New York Yard, in addition to those already enumerated in the constructor's, civil engineer's, steam engineer's, and storekeeper's departments.

COMMANDANT'S OFFICE.

One clerk, $1,200 per annum; one second clerk, $960 per annum; one porter, $456 per annum; one messenger, $1 25 per day.

ORDNANCE DEPARTMENT.

One writer, $2 50 per day; one writer, $2 per day; one messenger, to attend also on the commander's office, $1 25 per day; one foreman of gun-carriages, $3 12.

THE OFFICES OF BOATSWAIN, GUNNER, CARPENTER, AND SAILMAKER.

To be filled by warrant officers of the navy. One foreman of riggers, $2 50 per day; one foreman of sailmakers, $2 81 per day.

MASTER OF THE YARD.

Two master's mates, to assist in looking after yard laborers, each $2 per day.

INSPECTOR OF PROVISIONS, ETC.

One clerk, $750 per annum; one writer, $2 per day; one receiver, $2 per day; one assistant, $2 per day; one receiver of clothing, $2 per day; one assistant, $1 50 per day; one superintendent of mills, $3 per day; one assistant, $2 per day; two laborers at coffee mills, each $1 25 per day; four laborers for packing clothing, $1 25 per day; seven laborers for packing provisions, $1 25 per day; one office boy, 75 cents per day.

PURSER OF YARD.

One clerk, $750 per annum; one writer, $2 per day; one messenger, to attend lieutenant and clerk of the yard also, $1 25 per day.

CLERK OF YARD'S OFFICE.

One clerk of the yard, $1,200 per annum; one check clerk, $2 50 per day; one writer, $2 per day.

TEAMSTERS.

One head teamster, (to receive Sunday pay,) $2 per day.

POLICE.

Three captains, (first, second, and third,) each $1 75 per day; thirty watchmen, $1 50 per day.

GARDENERS.

One gardener for commandant, $1 50 per day; one gardener for commandant, $1 25 per day; one gardener for commander, $1 25 per day; one gardener for lieutenant, $1 25 per day; one gardener for surgeon, $1 25 per day. Not to be employed from the first of November until the 1st of March.

In the foregoing schedule, ordinary men and persons belonging to the dispensary are not included; nor are mentioned mechanics, laborers, teamsters, &c., as many of whom shall be employed, at the usual rates, as the commandant may deem necessary.

No. 2.

NAVY YARD, NORFOLK.

WASHINGTON, D. C., *June* 20, 1859.

SIR: After having made as thorough an examination of the New York navy yard as circumstances would admit, the board went directly to the Norfolk yard, and proceeded to make like inquiries there.

The following report is the result of their investigation, and in accordance with the record:

Importance of the yard noticed.

The Norfolk yard is not (perhaps owing to its position) liable to be so governed by political influences as the New York yard. It is the largest and most important yard in the United States, and serious injury would result to the service if such were the case, and due regard was not paid to efficiency and economy.

Erroneous views of the officers as to abuses existing.

It becomes a very difficult matter to ferret out the abuses of so large an establishment as the Norfolk yard, when there is but one opinion from the commandant down that no abuses exist; and had not the board ocular proof every day of the abuses in this yard, and had confined themselves merely to the testimony of the officers, the department might at this time be under the impression that one yard in the Union was in the highest state of discipline, and there was little to complain of on the score of economy and efficiency.

Commandant liable to be imposed upon by the workmen.

Reasonable allowance must be made for the evidence of the commandant, when he says that no abuses of any kind exist in the yard. The duties of his office confine him more or less to his desk, where his mind is occupied with an onerous correspondence; he seldom comes in contact himself with the personnel of the yard, who communicate with him generally through his organ, the executive officer. It is the interest of every one to keep all abuses covered up so that he can not discover them, and whenhe goes the rounds of the yard there is an apparent alacrity amongst the workmen, which the commandant is pleased to think exists throughout the day.

Difficulties experienced in ferreting out abuses.

The board were much facilitated in the first yard they examined by the desire of the officers to see abuses rectified, and their consciousness of the many evils existing and requiring to be corrected by stronger authority than they possessed; but there seems to have been a blind infatuation amongst some of the officers of the Norfolk yard regarding its efficiency in every respect, which is not sustained by any evidence except their own; no doubt these officers were fully convinced in their own minds that the government was faithfully served by every one employed in the yard; and if we take the standard of service in navy yards for the last ten years, perhaps they were justified in thinking so; but it does appear to the board that many of the abuses existing might have been known to the officers of the yard, who had been on duty there a long time, when the board, with all the disadvantages they were working under, discovered them in a few days.

Wants of officers much felt.

In some respects this yard labored under great disadvantages, and the most prominent one was, the want of officers to enable the commandant to carry out such regulations as might have been instituted. There has been but one lieutenant in this large yard, (two having been ordered to Paraguay,) upon whom, by regulation, devolved a multiplicity of duties, which one man alone could not possibly attend to. No commandant can be expected to keep up discipline in a yard, have the appropriations expended economically, maintain that perfect efficiency which the department seems desirous shall exist, unless he has the requisite number of officers to assist him.

Regulations of the yard not enforced.

The regulations of the Norfolk yard are sufficiently comprehensive, if carried out, to maintain good order throughout every department; but the board regret to say that they are not carried out either to the letter or in spirit. Out of fourteen articles for the preservation of discipline, &c., only six are carried out, and the rest only partially

observed. No matter how good any set of regulations may be, they are valueless unless placed in the hands of those persons who are to be governed by them; and the printed regulations of all yards should be posted up in every part of the establishment, so that no one could profess ignorance on the subject. There is but one set of regulations, that the board are aware of, in existence in the Norfolk yard; they are kept in the commandant's office, subject to the examination of any one, but not likely to be called for by the persons most interested in becoming acquainted with them.

Executive officer—his duties, powers, &c.

The executive officer of the Norfolk yard is invested with all proper authority as far as the orders of the commandant go; is required to exact a rigid compliance with all regulations—noting delinquencies and reporting them to the commandant—and has all the general authority to keep order usually conferred on persons in such cases. Admitting the evidence of the executive officer, that there are no abuses, it would be fair to premise that all the regulations are put in force; but there is other evidence on record to prove the contrary. The executive officer of this yard, after saying there were no abuses, admits "that politics is the bane of the Norfolk yard," and that "a good man can be run off by the system at present existing, or by a combination against him." He cites an instance where the government lost a good master workman by a combination of his men against him, and finally lost the foreman for some cause connected with the above mentioned combination. Notwithstanding the authority with which the executive officer *seems to be* clothed, he admits that he could not help it in any way, if master workmen chose to keep on inefficient men; which testimony is adverse to the opinion of the executive officer expressed elsewhere, when he says the yard is only deficient in organization with respect to the number of officers. As an argument adverse to the above opinion, he admits "that he has a general supervision, but has no right to interfere with the work going on in any department."

Duties of executive officer—how performed.

This is an anomalous position for any officer to hold, if he can possibly avoid it; and it is reasonable to suppose that the executive officer of this yard has found himself so hampered, and unable to carry out the regulations in the face of so many combinations, that he has gone along quietly and done his duty to the best of his ability, avoiding dissensions with the hidden power of the constructor, master workmen, and others, which has never failed to cause the discomfiture of any officer who has attempted to run counter to it.

It is the custom in all well-regulated yards for all persons (no matter who they are) to obtain permission from the executive officer before they leave the yard under any pretence whatever; but the constructor, civil engineer, and storekeeper leave the yard whenever they please—for which, however, they are in no way to blame, there being no regu-

lation to the contrary in the book of regulations, though there has been an order lately issued by the commandant forbidding the officers alluded to leaving the yard during working hours. Another order has also been issued to the master workmen not to leave their shops until bell-ring, and the executive is under the impression that the order is carried out; but the board have ample proof that this regulation, like many others, is a dead letter, affording another example, if any is wanting, of the loose manner in which duty is carried on.

The executive officer here should have the authority of keeping off inefficient men, which he cannot do now by the present regulation allowing constructors, master workmen, and others to send their requisitions for laborers direct to the commandant, who could not be supposed to know if such were efficient or not.

The executive officer goes over this yard twice a day or oftener, and goes through the shops, which, though a means of making the men work while present, is no guarantee against their idling away their time when his back is turned. A critical examination of the work going on at the time in one shop would be of much more benefit than a general supervision of the whole. As far as the stowing of vessels is concerned, and fitting them out generally for sea, the executive holds his proper position, and is assisted in his duties by the first lieutenant, the only other commissioned sea officer on duty in the yard.

Ordnance department—its present condition, &c.

The new ordnance building will, when finished, be a fine establishment; the ordnance department is at present very incomplete for the want of such a building, which, when constructed, will meet all the requirements of the service for many years to come.

All the stores belonging to the ordnance are not at present properly arranged and preserved, and the department appears to disadvantage.

In one of the wings of the ship-houses are stowed a quantity of gun-carriages in a bad state of preservation. The ordnance officer complains that he has no room to store them; but this kind of property is very expensive, and it should be the duty of the ordnance officer to make proper representations when he wants the means to take care of the property under his charge.

Ordnance officer—his powers, duties, &c..

The ordnance officer did, however, in September last, make complaints to the commandant of the state of his department; altogether, the ordnance at Norfolk does not compare favorably with that in New York. The laborers though are subordinate and respectful, and no more men seem to be employed than are necessary. There is one fault in the arrangement of the ordnance department at this yard—the ordnance officer is held responsible by the bureau for any defects that may occur in the construction of gun-carriages. The gun-carriage maker is only nominally under his orders, while in fact the ordnance officer should control everything in any way connected with his departments.

Department of provisions and clothing very efficient.

The department of inspector of provisions and clothing is administered by an officer who has been a short time in his present position. This department has been brought to a high state of efficiency, and the same system is carried on now, under Purser Johnson, as in New York. There are now large buildings going up for provisions and clothing, which, when finished, will will afford ample room for all provisions required for the navy at this station. It is recommended, when these buildings are finished, that no more be erected for the same purpose.

Naval steam engineer—his powers, &c.

The naval steam engineer has charge only of the steam engines building and undergoing repair, and can only be said to have a nominal authority over those departments, where he should exercise almost unlimited control. Even in the boiler-shop, where the steam engineer is constantly supervising the work that is going on, he has no say whatever in the selection of the men, and testifies that all the men employed in the boiler-shop are not competent to perform their work. He is firmly of opinion that the government cannot continue to build steam engines at the yards, on account of the expense of construction, unless the system is so altered as to place the power of selecting men in other hands. He is of the opinion (and the board concur with him) that the steam engines in the navy can be built better and cheaper if the steam department is properly organized. There is not the same arrangement here with regard to the position of steam engineers that exists in New York.

The engineer there approximates to the mechanical head of the steam department and its dependencies, while the engineer at the Norfolk yard might as well hold a subordinate position to the workmen, for all the authority he now has.

Steam engineer's department—too many men employed in.

He testifies that the government work could be done with two-thirds the number of men now employed, which would, in the opinion of the board, be a reasonable reduction. The engineer is also of opinion that, if he had naval engineers as his assistants, he could perform fully one-third more work than is now done, provided all the machine shops and dependencies were under one head. In the opinion of the engineer the men "are kept longer on work than is justifiable, to avoid the necessity of discharging them, which causes great expense; and that only by a thorough and systematic military organization can the yard be kept up economically and efficiently."

Outside influences—commandant should have power to resist.

From his testimony it appears that "an outside influence is constantly brought to bear on every workshop in the yard," and he is in-

favor of making the command of the commandant as absolute as it is afloat." Though this opinion of the engineer may be subject to criticism, he has no doubt been brought to this conclusion by the maladministration of affairs in the different departments, and his zeal for the service has made him recommend a system that no doubt would settle all difficulties at once.

Steam engineer's department—how it should be organized.

There is now employed in the departments properly belonging to the engineer the following assistants, permanently:

One naval steam engineer		
One draughtsman	$2 75	per day.
One master machinist	3 50	"
One foreman	3 12	"
One foreman of moulders	2 81	"
" " " boiler-makers	3 00	"
" " " plumbers	3 00	"
" " " coppersmiths	3 12	"
" " " armorers	2 81	"
" writer to steam engineer	2 00	"

This allowance should not be increased for the present, and the number of men employed should be reduced in accordance with the rule recommended by the board for the New York yard.

Warrant officers—their position, &c.

The warrant officers of the yard are directly under the control of the executive officer, and no abuses exist in those departments that the board are aware of. The sailmaker's department has been in charge of a civilian for many years, but he has latterly preferred giving it up and obtaining a sailmaker's appointment, having been subjected to much inconvenience from combinations against him by persons whom he would not employ. Officers of the grade of sailmaker find themselves debarred the privileges enjoyed by other grades, in having the position of sailmaker filled by a civilian, as is the case at the Norfolk yard; and for obvious reasons the board recommend that a naval sailmaker be appointed to fill that department.

Police—present condition.

The police of the yard is represented as good. There are twenty-four watchmen now employed, besides the marine posts, and four more are required by the commandant. The duties of the watchman do not seem to be very arduous, and are confined to short ranges in and about the yard.

Watchman at the gate—his duties, &c.

There is a watchman stationed at the main gate, whose duties might be made very important; but he has little authority to prevent any

one from leaving the yard during working hours; there is too much discretion left to this watchman in arresting or reporting any person going in or out; he has workmen's pay docked sometimes, if in his opinion they stay out too long. On questioning a policeman, the board ascertained that master workmen were in the habit of going out an hour before bell-ring, without the policemen having the right to report the matter to the executive officer. It is recommended that the captain of the watch posted at the gate in the Norfolk yard shall keep a pass-book, in which shall be inserted the name of every person whatsoever who may leave the yard during working hours, which book shall be laid before the executive officer every morning at eight o'clock.

Policemen not armed or uniformed.

The policemen are not uniformed, (with the exception of a star on the breast,) and present rather a shabby appearance. These watchmen have nothing in the shape of arms, and the only weapon they carry is a stick, which, in case of necessity, would be of no use whatever.

Naval Constructor Hartt—his good character—how he performed his duties, &c.

The department of naval constructor has been conducted by a very intelligent gentleman—Mr. Hartt—who, since the meeting of this board at Norfolk, has died in the discharge of his duties.

Mr. Hartt had been constructor at this yard for twelve years, and had gained many friends, owing to his estimable character, and for his fearless sacrifice of all personal considerations during a time of great peril, in the midst of pestilential disease.

With every quality to adorn the position he held, he made himself less useful than he might have done if he had exerted himself more to sustain the naval authority in the yard—laboring frequently under a false impression that his rights were invaded, and that he could exercise almost as much authority as the commandant himself. These radical notions detracted very much from the character of the man, while they in no way interfered with his attention to his duties in any department under him. He lived long enough to complain to this board of the difficulty he encountered, under the present system, in carrying on his duties, owing to his having no authority over the men in his department, which could not have been well regulated, from the fact that the master ship carpenter claimed the right to nominate his own men, without any reference whatever to the constructor.

Naval constructor's views as to making the position of master workmen permanent.

The constructor was very strongly in favor of making the heads of departments in the yard permanent, partaking somewhat of a military

character; and his opinions are entitled to a great deal of consideration, owing to his having been brought to this conclusion by the disorganized state of the yard, and having to change opinions long cherished—opinions which involved him in disputes on more than one occasion—and which he would not have yielded up, but from the sternest necessity. For his views, which are rather extended, the board respectfully refer you to the evidence of the constructor brought out before them.

Constructor's department—how it should be organized.

The following allowances are recommended by the board in the constructor's department:

One draughtsman, $2 81 per day; one clerk, $800 per annum; one writer, $2 per day; one office-attendant, (laborer,) $1 25 per day; one master carpenter, $4 per day; one writer to master carpenter, $1 50 per day; one master shipjoiner, $3 50 per day; one foreman, to assist and work, $2 81 per day; one master blacksmith, $3 50 per day; one foreman, to assist and work, $3 12 per day; two laborers in smith's shop, each, $1 25 per day; one master boatbuilder, $3 50 per day; one leading man, with 25 per cent. additional pay to first class workmen, $2 25 per day; one laborer, to attend and clean shop, $1 25 per day; one master mastmaker, $3 50 per day; one master painter, $3 50 per day; one leading man, to assist and work, at 25 cents additional pay to first class workmen; one laborer, to work and attend in shops, at $1 25 per day; one master blockmaker, $3 50 per day; one leading man, to assist, at 25 per cent. addition to first class journeymen's pay; one laborer, to attend and clean shops, $1 25 per day; one foreman of coopers, at $2 50 per day.

This department has but little work since iron tanks have been used. There are but five men employed in the shop, and a master-cooper is not required.

In addition to the above allowances, as many quartermen as may, in the judgment of the commandant and naval constructor, be necessary to carry on the duty, may from time to time be rated, not exceeding more than one quarterman to every thirty journeymen employed, to receive 25 per cent. upon first-class workmen's pay; provided the increased pay does not exceed fifty cents per day. Laborers and apprentices not to be included in estimating the number of quartermen in any gang.

The naval constructor, with the sanction of the commandant, may employ in the above departments as many laborers as in his judgment may be necessary—placing them under the heads of the several departments to be mustered, time charged and returned by them; and the naval constructor may, in like manner, apportion the necessary number of foremen or leading men to the laborers employed in any gang, allowing, as with the mechanics, 25 cents in addition to the pay of laborers.

No water boys allowed in any of the gangs, or minors employed as laborers.

Civil Engineer—his duties, how performed.

The office of civil engineer is held by a gentleman whose conduct and attention to duty is characterized by the commandant as admirable; nevertheless, there seems to be a good many abuses in this department, which, if not rectified at once, will make the buildings now under construction cost much more than they should.

Office of civil engineer—present force employed in.

There is now on duty in this yard one civil engineer, one assistant, one draughtsman, one clerk, one messenger, and two master masons, one of whom considers that he is performing the duty of assistant engineer; one master mason, in the opinion of the board, is all that is required at this yard at any time, and the way two berths of this kind happened to exist at the same time is, that the master mason, Mr. Herbert, was turned out to make room for an incompetent person, and taken back again ten days after; as the first master mason could not be removed, Mr. Herbert was brought in as superintendent of quay wall, an office not at all required.

The superintendent of quay wall testifies that if he was constructing a private work that he would not employ so many men, and also says that the men in the engineer's department do not work as well as men outside of the yard. If this is so, the conduct and attention to duty of the engineer cannot be said to be admirable, for it is his duty to see that his department is conducted with a due regard to efficiency and economy.

Master mason—but one is necessary.

In view of one of the master masons being unnecessary, the board recommend that one of them shall be abolished; and as Mr. Herbert seems to be the most faithful and competent person, it is recommended that the preference be given to him.

Dock carpenters' gang—should be abolished

Attached to the engineer's department is a gang of men called dock carpenters, whose duty can be performed, according to the testimony, by the carpenter gang. By getting rid of the dock carpenters one more department can be dispensed with, and all the duty of that kind brought under one head, as it ought to be. The dock carpenters' gang originated with the dry-dock, and after they were no longer required there they were kept on the building of quay walls. The engineer complains very much that he cannot carry on his duties to his satisfaction owing to the want of subordination in the work-gangs; he is in favor of the commandant having the entire control of all the appointments of master workmen, and that then he will consider the labor organization perfect.

Military authority too weak.

He thinks the military organization entirely too weak, and that officers should be invested with more authority. He considers that the navy yard at Norfolk is neither civil nor military. This evidence, coming from a civilian who has been connected seven or eight years with this yard, is important, showing that the evil must be very great to bring forth an opinion of the kind from a person holding no military position.

Civil engineer too often absent from the yard.

The board had reason to be dissatisfied with the conduct of the engineer for going to the north so often for the purpose of purchasing material. This has, however, been done in some cases with the sanction of the bureau; but it very much increases the expense of a building if the engineer is permitted to run on to a northern establishment to procure material, when the article required might be obtained nearer at hand. Now that there is a casting and machine shop in the yard, there will be no further necessity for the engineer's leaving his post at all.

Civil engineer's incompetency commented on.

The civil engineer, though theoretically subordinate, was not practically so when questioned by the board relative to a supervision over the selection of men by the executive officer. His evidence on that occasion was very inconsistent, and it was quite evident that he desired to prevent the military authority from exercising that control in his own department which he was so desirous to see established in other departments of the yard.

Lieutenant North, of the navy, was called before the board to give information relative to the system practiced in English dock yards. When asked if he had ever had his orders countermanded by any inferior in the yard, he answered that he had had them countermanded by the civil engineer in a disrespectful manner. This is a state of things which should never exist in a government dock yard, and it offers an argument in favor of curtailing the power of any department whose position enables it to dictate to the lawful authority of the yard.

Storekeeper's duties—how executed.

By the evidence of the officers of the yard the storekeeper's department is in good order in every respect. He is attentive to his duties, attends every day, unless absent by permission, and altogether gives general satisfaction. The commandant is of opinion, however, that his duties could be performed by a purser in the navy, and, as this office is political in its tenure, thinks the same rule should be adopted with regard to it as is recommended for the New York yard.

The board examined every part of the building, and could find no fault in the arrangement, except that there were too many persons employed, some of them old pensioners, who had done good service in the navy.

Mustering of men liable to abuse.

The plan of mustering men here is liable to great abuse. There are five mustering points, so far apart that they cannot properly be attended by a commissioned officer.

The clerk of the yard admits that the plan is subject to fraud, and that he had stated his objections to the head of the bureau. After a man is once put on the rolls he is never mustered again by the clerk of the yard, who musters his own gang; and, if any of the irresponsible persons employed to muster the men at the different points chose to enter into collusion with them, the government would be defrauded.

Muster—first lieutenant should attend.

Although there are so many points of mustering, there is no reason why the first lieutenant of the yard should not be present at those adjacent to each other, for the purpose of having the muster performed properly. The muster on several occasions was attended by members of the board, who were convinced every time they witnessed it that the whole matter was very improperly conducted.

Two points of mustering sufficient.

The board recommend that the muster be performed at two points only, and that a commissioned and warrant officers attend, as at other yards.

Owing to the number of mustering points there are a great many writers employed who might be dispensed with. The services of two at least in the mustering office are not required.

Master workmen—neglect of duty.

The master workmen in this yard do not attend the muster, which they should be compelled to do, and are in the habit of going in and out of the yard whenever it suits their convenience. There are but three or four of the entire number of master workmen who stay in their shop until bell-ring, and notwithstanding a late order to the effect that no master workman shall leave the yard during working hours, the master blacksmith, mason, machinist, and caulker, pay no attention whatever to it. The master workmen as a body are an intelligent set of men, and under proper regulations, and with their powers circumscribed, would no doubt faithfully perform their duties to the government.

The abuse of leaving the yard can never be corrected while the commandant has such limited authority; and if it was fully understood that he had the power to dismiss any one for the violation of the order, the abuse would soon disappear.

Organization of yard imperfect.

In the face of all the abuses enumerated in this report, the board can only come to the conclusion that this yard is not properly organized in any one department. There seems to be a great want of attention to duty in almost all the workshops; and there are more departments than are required. The whip-saw pit, where six men are employed, should be abolished; for as at present conducted it is of no use whatever. The dock carpenter's department is very badly conducted; the men in that department having been seen by members of the board sitting about doing nothing. On inquiring for the foreman, thirty minutes after bell-ring, he was no where to be found.

Boatbuilder's department very negligent.

This inattention to duty in the shops was more particularly noticed in the boatbuilder's department. Out of nineteen men, twenty-five minutes after bell-ring, not one of them was at work, but were chasing each other about the loft. On inquiring for the master boatbuilder or foreman, neither of them could be found at their posts. From their observation throughout the yard, the board were convinced that a much smaller number of men would do all the work now going on if the heads of departments attended to their duties.

Fire department efficient.

The fire department, as a part of the organization of the yard, is an exception to the general rule, and is in excellent condition, apparently competent to extingush any fire that may occur in the yard. The fire-bell places the men under the control of the constructor, when in fact they should be led by the executive officer and 1st lieutenant of the yard.

General appearance of the yard.

The general appearance of the yard is good, and the building in pretty good order, with the exception of the ship-houses.

The Board discovered that the galleys are not properly taken care of, being stowed in a damp building with a dirt floor. Hemp cables and hausers are also stowed in the same building, much to their detriment. The chain cables are too remote from the water, requiring expensive transportation.

There is a gang of negro men termed "scavengers," whose duty it is to clean up the yard, and perform labor which would be distasteful to a white person. They get a low rate of pay and are very useful in the yard; the number may seem greater than there is any necessity for, but the board are of opinion that they are all required.

Want of system and military authority in the yard.

The board have devoted a good deal of patient investigation into the affairs of this yard, and it would lengthen out this report too much to go into the details of every existing abuse. The fault is in the system practiced in our navy yards generally, and in the absence of proper authority being vested in the commandant.

Master workmen generally politicians.

The master workmen, considering themselves necessary to their political friends, and being assured of protection, have assumed a bearing independent of proper authority, out of keeping with their position, and not to be found in any other navy yard. It is very apparent to the board, although they have not taken much evidence on this point, that the leaders of a majority of the shops are politicians, and have around them a set of men who are selected as much for their political as mechanical character. They nearly all admit the fact, and say, without hesitation, that if their offices were made permanent and during good behavior, it would make their positions independent of their men, and enable them to do their duty faithfully to the government; for the corroboration of which opinion, the board respectfully refer you to the accompanying testimony.

We have the honor to be, very respectfully, your obedient servants,

F. H. GREGORY, *Senior Officer.*
G. J. VAN BRUNT, *Captain.*
C. H. POOR, *Commander.*
J. R. TUCKER, *Commander.*
DAVID D. PORTER, *Lieutenant.*

Hon. I. TOUCEY, *Secretary of the Navy.*

N. B.—There is a custom prevalent in the Norfolk yard, to allow the men to go out one hour before regular bell-ring on election days to vote. This rule exists in no other yard visited by the board, and it is recommended it be discontinued.

The following is a list of the master workmen, clerks, writers, and other employés which the board recommend should be allowed at the Norfolk navy yard:

COMMANDANT'S OFFICE.

One clerk to commandant, $1,200 per annum; one second clerk to commandant, $960 per annum; one porter, $456 per annum; one messenger, 88 cents per day.

ORDNANCE OFFICE.

One writer, $2 50 per day; one writer, $2 per day; one foreman of gun-carriage makers, $3 12 per day; one messenger to attend on the commander's office also, 88 cents per day.

FIRST LIEUTENANT'S OFFICE.

One messenger, to be employed in cleaning up when not otherwise employed, 88 cents per day. The offices of boatswain, gunner, carpenter, and sailmakers, to be filled by naval warrant officers. One foreman of riggers, $2 50 per day; one foreman of sailmakers, $2 81 per day.

MASTER OF THE YARD.

Two master's mates, to assist the master to look after the yard laborers, $2 per day.

CONSTRUCTOR'S DEPARTMENT.

One draughtman, $2 81 per day; one clerk, $800 per annum; one writer, $2 per day; one office attendant, $1 25 per day; one master carpenter, $4 per day; one writer to master carpenter, $1 50 per day; one master ship joiner, $3 50 per day; one foreman, to assist and work, $2 81 per day; one laborer, to clean up, $1 25 per day; one master blacksmith, $3 50 per day; one foreman, to assist and work, $3 12 per day; two laborers in smith's shop, each, $1 25 per day; one master boat builder, $3 50 per day; one leading man to work with tools, and receive 25 per cent. addition on first class journeymen's pay; one laborer, to attend and clean up shop, $1 25 per day; one master caulker, $3 50 per day; one master mastmaker, $3 50 per day; one master painter, $3 50 per day; one leading man to assist and work, and to receive 25 per cent. addition on first class journeymen's pay; one laborer, to work and attend in shop, $1 25 per day; one master blockmaker, $3 50 per day; one leading man to assist and work, at 25 per cent. addition on first class journeymen's pay; one laborer, to attend and clean up shop, $1 25 per day; one foreman of sawyers, $2 81 per day; one foreman of coopers, $2 50 per day; one inspector of timber, $1,200 per annum; one writer to timber inspector, $2 per day.

STEAM ENGINEER'S DEPARTMENT.

One chief naval engineer; one draughtsman and writer, $3 per day; one writer, $2 per day; one laborer, office attendant, $1 25 per day; one foreman machinist, $3 per day; one foreman boilermakers, $3 12 per day; one foreman moulders, $3 12 per day; one foreman plumbers, $3 12 per day; one foreman coppersmiths, $3 12 per day; one foreman armorers, $2 81 per day; one foreman tinners, $2 50 per day, two assistant engineers, one at $3, and the other $2 50 per day.

The above foremen to take the place of master workmen now employed—the gangs being small, masters are not necessary. The chief naval engineer is to have charge of all the engines and machines in the yard worked by steam; to keep them in good order and repair; to see that proper and efficient men are put in charge of the engines, and no more employed for working them than are absolutely necessary.

The naval engineer is to superintend the manufacture of all articles made in the above departments, the fitting of steam engines, and all other matters required in the equipment and repair on board ships coming within the duties of an engineer.

Upon the approval of the commandant, he shall answer all requisitions from other departments, and render to each accurate accounts of costs of work, without delay, after completion.

The number of firemen and coal-heavers to be regulated according to circumstances.

CIVIL ENGINEER'S DEPARTMENT.

One civil engineer, $2,500 per annum; one draughtsman, $950 per annum; one writer, $2 per day; one laborer, office attendant, 88 cents per day; one master mason, $3 50 per day; one quarterman to every thirty men employed, and such additional quartermen as the civil engineer, with the sanction of the commandant, may deem necessary—the quartermen to receive 25 per cent. addition on first-class journeymen's pay, provided it does not exceed 50 cents per day; one master house joiner; one foreman. The number of quartermen to be regulated by the same rule as in the mason's gang; one to every thirty mechanics, not including laborers and apprentices.

INSPECTOR OF PROVISIONS, &C.

One clerk, $750 per annum; one writer, $2 per day; one receiver, $2 per day; one laborer, $1 50 per day; one laborer, $1 38 per day.

PURSER OF THE YARD.

One clerk, $750 per annum; one writer, $2 per day; one messenger, to act for the lieutenant, purser, and clerk of the yard, 88 cents per day.

CLERK OF THE YARD.

One clerk of the yard, $1,200 per annum; one check clerk, $2 50 per day; one writer, $2 50 per day.

STOREKEEPER'S DEPARTMENT.

One chief clerk, $1,200 per annum; one clerk, $900 per annum; one writer, $2 per day; one receiver, $1 75 per day; one receiver, $1 50 per day; 5 laborers, each $1 25 per day.

TEAMSTER'S DEPARTMENT.

One head teamster, $2 per day, to be paid for Sundays and holidays; drivers, as many as the commandant may think necessary, at $1 25 per day; two attendants for every eight yoke of oxen, and receive $1 25 each.

POLICE.

Three captains, (1st, 2d, and 3d,) each $1 75 per day; 26 watchmen, each $1 50 per day.

No. 3.

NAVY YARD, PHILADELPHIA.

WASHINGTON, D. C., *June* 20, 1859.

SIR: In taking evidence in all matters connected with the Philadelphia Navy Yard, the following is the result of our investigation:

The Philadelphia yard has been badly governed for some years past, and may be said to have been almost given up at one time to the politicians, who exercised a great control in the number of men to be employed on the government work. There does not appear to have been that system prevailing which should exist in all well regulated yards.

Regulations of the yard imperfect.

The regulations are not at all suitable to the present condition of the yard; many of them are obsolete, and it is doubtful whether their existence is known to half a dozen persons. The present commandant cannot be regarded as responsible for any of the abuses existing at this moment, having been on duty but a short time; and, holding only the position of commandant *pro tem.*, it is doubtful if he has the authority to make any radical changes, while another officer, who has subscribed to the present condition of affairs, may at any moment assume command and disapprove of everything he has done.

Present commandant—his peculiar situation—cannot correct abuses.

One thing is very certain, that the present commandant *pro tem.* will leave no means untried to introduce a wholesome discipline into the yard under his command; and he pursued the proper course to correct abuses while the board were in session, and when they brought to his notice any existing evils. He suffers under the disadvantage of having to reside some distance from the yard, owing to the government's not having provided the commandant with a house to live in, and most of his time is passed out of the yard. The board have laid

it down as a rule that a perfect state of discipline cannot be kept up unless the officers (particularly the principal one) reside in the yard; and the commandant, above all others, should be located where he could be consulted at any moment.

Commandant's office—abuses in.

There are one or two abuses connected with the commandant's office which have existed for a long time, and, having found them to exist when he took charge, he has made no change whatever.

Duties of 2d clerk to commandant, and clerk of the yard—by whom and how performed.

The duty of 2d clerk is performed by the commandant's secretary, who also performs the duty of mustering clerks of the yard. The two persons who should do those duties never give their attendance at all in the yard. They have drawn their pay ever since they have been in office without giving the government any labor in return for it, both of them being employed in business in the city. The duties are, however, faithfully performed by Mr. Crabbe, the commander's clerk, who does not receive any part of the pay, if his assertion is to be believed; but it is the opinion of the board that no one person in a yard ought to be permitted to perform the duties of more than one office, for it is a fixed principle that whoever accepts an office must give it his entire attention, which otherwise he cannot do, for at times he must neglect one duty for another, or get an irresponsible person to attend to the affars of the office for him. There can be but one opinion about this arrangement, no matter with whom it originated; it is what is generally considered a "false muster," and a fraud upon the government, unless it has been authorized by law, or by the Navy Department, which is not likely, and does not appear in evidence. For Mr. Crabbe's explanation of the affair the board respectfully refer you to his evidence, p. —, in which he gives a full statement of the matter, and which is somewhat corroborated by the evidence of Captain Engle on page 35 of transactions in the Philadelphia Navy Yard.

Executive officer—his zeal and efficiency.

The board were much pleased with the zeal exhibited by the executive officer of this yard in helping them to bring to light existing abuses. No one could be better qualified to judge of the ill effects of a badly regulated yard than Commander Carr, he having served in the Philadelphia yard at a time when military authority was completely overshadowed by an influence that should hold no place in any establishment belonging to the United States. Owing to the executive officer residing in the yard, he is naturally more conversant with its affairs than the commandant, who has been here but a short time, and who has not been annoyed as the present executive has been.

Too many workmen employed.

Commander Carr is of opinion that fully one-third of the men now employed can be discharged with advantage to the government, and thinks that more work could be got out of the remainder than is now obtained, and cites as an instance the machine shop, which was formerly under the blacksmith, and which, when placed under a faithful person, was reduced nearly one half, (from forty to twenty-two men,) and a greater amount of work performed than before. He recommends a like reduction in almost every department, which will be referred to in the proper place.

Expenses of the yard disproportionate.

It is very evident to the board that this, though the smallest yard in the country, is, comparatively speaking, much more expensive than any other ; it has some advantages, it is true, but they are lost to the government by the manner in which its affairs are conducted, by the *personnel* being kept independent of the proper authority of the yard.

According to an estimate made by persons, in evidence, the extra number of men unnecessarily employed in the Philadelphia yard would, if cut down, be a saving of over $100,000 a year, which would add one fine ship to the navy yearly ; and as an increase of the navy is the great disideratum, it is desirable that the reduction be made as soon as possible.

Politicians have too much sway.

The present state of things existing in this yard is, no doubt, owing to officers yielding from time to time to political influences, which the government alone had the power to regulate.

Departments badly arranged.

The arrangement of the heads of departments in the Philadelphia yard differs somewhat from that in other yards visited by the board. There is no naval engineer here, and the departments generally considered as under his charge are now divided between the dock master and machinist. The departments of plumber, tinner, coppersmith, and founder, which should all be under a naval engineer, are in a separate department ; not one of which has not more men than are required, and are, in fact, supplied with a larger number of workmen than is to be found in the first-class yards. The quantity of work going on does not justify the employment of one-half the number.

A naval engineer should be placed in charge of the steam department.

It is recommended by the board that a naval engineer be put in charge of the steam department and all its dependencies ; that the office of dockmaster be abolished, or, if not abolished, that the dock-

master shall confine himself exclusively to the management of the dock; then, and only then, will the commandant of the yard be enabled to arrive at a correct estimate of the number of men required in those departments, now under three or four heads, where the opportunity to defraud the government is much greater than if under one responsible head.

Warrant officers—their duties, how performed.

All those departments of the yard under the control of a commissioned or warrant officer, and directly responsible to the executive officer, are in good condition and subject to no abuse. It does not appear that they are ever interfered with by outside influence, as is the case with master workmen and others, who, it is very evident to the board, must volunteer their services to political parties, or listen very willingly to the overtures made to them, for fear of being turned out themselves. If the position of master workmen were secured to them, as those of warrant officers are, there would be an end of the present system of crowding our yards with men.

Police inefficiency—its importance.

The police of the yard is not very good, some of the men being old pensioners, and incapable of arresting any one depredating on public property. In a yard situated in such a thickly settled part of the city, the police ought to be of the most efficient kind, and in sufficient numbers to protect the public property at all points. There is nothing but an ordinary pine fence which divides the yard from outside establishments, and it is very easy of dark nights to commit depredations. It is recommended that the police of this yard be reorganized, the old and inefficient to give way to more active men; for though those men who have served the country faithfully for years should be provided for, yet they should not be kept in positions where they could be of no possible use in case their services should be required.

Police should be uniformed.

The police of this yard have no uniform, nor any distinctive mark (except a star) by which they could be recognized, and their appearance, altogether, is not creditable to a government yard.

Naval constructor—his duties, how performed.

The constructor's department proper is well conducted, owing in a great measure to the master ship carpenter being very faithful in the performance of his duties and very subordinate to the military authority of the yard. The constructor is an old and faithful servant of the government, and cannot be expected to give that attention to his work he did in his younger days. Though faithfully honest in the performance of his duties, he does not give the military authority that aid which a man in his position might, owing to an exaggerated idea he has of his own authority.

The constructor an old and faithful servant.

The constructor is past the age when men should be called on to perform duty requiring the energy of middle life. His long service entitles him to rest on full pay for the remainder of his days; and the public interest would be served if some provision was made for those old and faithful servants in their declining years. It is true, they are kept employed until the last moment of their lives, but the duty required of a constructor is onerous, and if fully complied with would soon break down an old gentleman upwards of seventy years of age. It is asserted in evidence that the constructor never visits the workshops to examine whether the work is done efficiently and economically, which, however, is looked after by his representative, the master shipcarpenter, who, fortunately, is a superior man of his class; but it should be the duty of the constructor himself to look after everything going on under his direction, and to report to the commandant if more expense is incurred than is necessary. This, no doubt, the constructor would do if able, but it is beyond his physical ability.

Constructor disposed to assume undue authority

It is much to be regretted that a gentleman who has been so long connected with the service should desire to assume, and asserts that he has assumed, an authority in the yard which does not belong to him; an authority he could never exercise without ignoring the executive officer of the yard, and thereby setting the commandant at defiance. The board regret to be obliged to refer to this matter at all, in consideration of the advanced age of the naval constructor, and the esteem in which he is held by those with whom he has been associated; but they would be derelict in their duty if they passed over any matter where the interest of the service and the organization of navy yards might be affected.

Naval storekeeper—his duties, how performed.

The naval storekeeper's office is filled by an estimable gentleman in private life, who unfortunately looks upon his appointment as a reward for political services. There is rather more to do in delivering provisions in the storekeeper's department in the Philadelphia yard than in the other yards, excepting Portsmouth, but in other respects the duties are very light, and might easily be performed by much less force than is now employed.

Storekeeper's second clerk—office a sinecure.

As a proof that not all are required, the second clerk of the storekeeper (his nephew) has never been to the store since he was appointed, and draws his pay while living in the city and following some other business. The navy storekeeper did not meet this question as he should have done; he evaded giving the board the in-

formation required until it was drawn from him by cross-questioning, and even then did not consider that he had lent himself to a fraud, or at least had connived at a false muster. This abuse, however, did not originate with the present storekeeper; the person who preceded him did the same thing, appointed a relative as his second clerk, who never did any work in the office, and it was tacitly acknowledged as right by the commandant's not interfering in the matter.

Storekeeper's explanation of the abuse.

The present storekeeper states that he understood when he took the office that he had the privilege of appointing whom he pleased as second clerk, whose pay was to be a part of the perquisites of office; but the board are of opinion that it never was intended by law, nor by any rule of the department, that any such arrangement should exist.

Storekeeper, though faithful, the office is not necessary.

There seems to be no particular complaint about the manner in which the storekeeper's duties are performed; he is on hand whenever he is wanted, and perfectly subordinate to the rules of the yard; but his chief clerk testifies that there is no use whatever for a storekeeper, and that his office is almost a sinecure. This also seems to be the general opinion, and the board have to recommend that the storekeeper's office be regulated as proposed in other yards.

Mustering of men—how performed.

The manner of mustering men in this yard is subject to abuse, and any man, after his muster, can leave the yard, provided his foreman chooses to wink at the matter. As before mentioned, the commandant's secretary attends to the muster, and, from his own account, attends to it faithfully; but there must be times when the commandant's secretary is likely wanted elsewhere, and he is then obliged to entrust the mustering of the men and making up of the rolls to some irresponsible person.

Commandant's clerk—cannot properly attend to the duty of mustering.

The board do not feel satisfied that a person holding the position of commandant's clerk should enter into an arrangement by which he performs the duty of two offices besides his own, and winks at their engaging in business outside the yard, when their services should be given to the government. If, however, it can be shown that it was sanctioned by proper authority, the commandant's secretary is in no way to blame. The board are of opinion that the arrangement is a very bad one for the government, and recommend that it be put a stop to as soon as possible.

Muster clerk necessary.

A faithful and honest mustering clerk is of very great importance to a yard, for more frauds could be committed in that quarter than perhaps in any other.

But two mustering points necessary.

It is also recommended that never more than two mustering points be allowed, and that they be placed so close together that they can be supervised by the master, first lieutenant, or other officer appointed for that purpose. The master workmen do not attend muster in this yard, and there are cases where old pensioners, foremen, and others, do not come into the yard for days at a time, being excused from muster or answered for by the foreman. There is more abuse of this kind in Philadelphia than in any other yard. As the master workmen may be said to have ruled this yard for some years past, the board beg leave to devote a small space to them.

Workshops—abuses in.

It would require a great deal of time to sum up all the instances of mal-administration in some of the workshops. The blacksmith's shop takes the lead in abuses, and my be said to be conducted without any regard whatever to government interests.

Master blacksmith—abuses his trust.

The master blackmith is a politician, and admits it, and there is evidence on record to show that he does not always employ the most efficient kind of men; moreover, his shop is crowded with a larger number of persons than is justified by the quantity of work going on here. He has on occasions been known to defeat the efforts of officers of the yard to keep men off, and admits that he used his influence with a member of Congress in Washington to have thirty men put on when it was denied him by the proper authority of the yard. There are now in his department 108 men, with foreman, quartermen, and a larger gang of men than is employed in New York.

Master blacksmith should be dismissed.

The board are of opinion that a proper state of things will never exist in the blacksmith's department until there is another head there; he has exercised a certain amount of patronage which he will be unwilling to give up, and for which he will be contending as long as he holds the position. Independent of this, the shop has been conducted on a system of fraud, and the board recommend that the master blacksmith be dismissed.

Blacksmith's department should be investigated as to the number of men employed.

It is also recommended that the commandant of the yard institute a rigid inquiry through such persons as he may think proper to appoint, into the affairs of the blacksmith shop, and see how many men can be dispensed with.

The following evidence taken while the board was sitting is here inserted to justify them in coming to the above conclusions:

"The blacksmith is too much of a politician for his place; he has too many men employed, and he would not be honest in the discharge of his duty. I hear outside that he is no mechanic; he was a political appointment; his foreman is a very competent man, and very attentive to his duty."

Blockmaker's department unnecessary.

There has grown up of late years a department in the yard, which, starting with very small beginnings, has finally ended in being an establishment of some magnitude, without its ever having been intended that such a department should exist at all. The board allude to the blockmaker's shop, where are employed a master blockmaker, one foreman, and twenty-one other persons; about the same number as are employed in the largest size blockmaking establishment. The blockmaking shops in Boston and Washington are more than sufficient to make all the blocks for the navy; and being provided with all the necessary machinery can make them much cheaper than the master blockmaker at Philadelphia, though he insists that he can get up blocks cheaper than they can be made in Washington; but his assertion is not borne out by the following estimate made for the steam sloop Lancaster's blocks, where the sum of $1,226 55 is shown in favor of the Washington yard:

Estimate sent in from the Philadelphia yard for the Lancaster's blocks amounted to	$3,337 00
To which should be added for smith's work	700 00
For brass sheaves and conges	300 00
For master blockmaker's time	400 00
Cost in Philadelphia	4,737 00
Cost in Washington	3,510 45
Difference	1,226 55

Independent of the extra expense, there are other reasons for abolishing this department altogether. The board therefore recommend that the master blockmaker and his men be discharged at once, and that when it is required at any time to repair blocks, that never more than three men be emplyed, who shall be taken from the ship carpenter's gang.

Master workmen too much influenced by politics.

As a general thing the master workmen of the yard are represented by the officers as excellent men, but operated upon by the fear of losing their offices, which feeling, Captain Engle says, extends even to the higher grades. There must be great mal-administration in those departments to justify Commander Carr in testifying that the work on the yard could be done with one-third less men than are now employed.

General appearance and organization of the yard.

The general appearance of the yard is good and the public property well preserved. The fire department is in good order and capable of performing efficient service in case of emergency; but the general organization of the yard is very bad, and although not entirely independent of military control, it was only saved from becoming so by the issuing of the order of the 14th December, 1858, placing more authority in the commandant's hands.

Officers of the yard should be sustained.

In conclusion, the board would respectfully recommend that the efforts of the officers in this yard to bring the establishment to a proper condition be firmly supported, having no other purpose to serve than the interest of the government. It is not likely that officers who have a position in the navy to support, will do anything that will bring discredit on the government. If they err, it will be on the side of discipline, which will certainly insure a greater amount of efficiency and economy than has heretofore existed in the Philadelphia navy yard.

We have the honor to be, very respectfully, your obedient servants.

F. H. GREGORY, *Senior Officer.*
G. J. VAN BRUNT, *Captain.*
C. H. POOR, *Comdr. U. S. Navy.*
JOHN R. TUCKER, *Comdr. U. S. N.*
DAVID D. PORTER, *Lieutenant.*

Hon. ISAAC TOUCEY,
Secretary of the Navy.

The following is a list of the master workmen, clerks, writers, and other employés, which the board recommend should be allowed at the Philadelphia navy yard.

COMMANDANT'S OFFICE.

1 chief clerk, $900 per annum; 1 second clerk, $750 per annum; 1 porter, $456 per annum; 1 messenger, $1 25 per day.

ORDNANCE OFFICE.

1 writer, $2 50 per day.

FIRST LIEUTENANT'S OFFICE.

1 messenger, to be employed in cleaning up when not otherwise engaged, $1 25 per day.

THE OFFICES OF BOATSWAIN.

The offices of boatswain, gunner, carpenter, and sailmaker, to be filled by naval warrant officers; 1 foreman of riggers, $2 50 per day; 1 foreman of sailmakers, $2 81.

MASTER'S DEPARTMENT.

2 master's mates to assist the master to look after the yard laborers, each, $2 per day.

CONSTRUCTOR'S DEPARTMENT.

1 draughtsman, $2 81 per day; 1 clerk, $800 per annum; 1 writer, $2 per day; 1 office attendant, $1 25 per day; 1 master ship-carpenter, $4 per day; 1 writer to master carpenter, $1 50 per day; 1 master ship-joiner, $3 50 per day; 1 foreman to assist with tools, $2 81 per day; 1 laborer to clean up, $1 25 per day; 1 master blacksmith, $3 50 per day; 1 foreman to assist and work, $3 12 per day; 2 laborers in shop to clean up, $1 25, each per day; master boat-builder, $3 50 per day; leading man to work with tools, and receive 25 per cent. on first-class journeyman's pay; 1 laborer to attend and clean up, $1 25 per day; 1 master caulker, $3 50 per day; 1 master painter, $3 50 per day; 1 leading man to assist and work, to receive 25 per cent. additional on first-class journeyman's pay; 1 foreman of sawyers, $2 81 per day; 1 foreman of coopers, $2 50 per day; 1 inspector of timber, $1,050 per annum; 1 writer to same, $1 50 per day.

STEAM ENGINEER'S DEPARTMENT.

1 chief naval engineer; 1 draughtsman and writer, $3 per day; 1 foreman of machinists, $3 per day; 1 foreman of moulders, $3 12 per day; 1 foreman of plumbers, $3 12 per day; 1 foreman of coppersmiths, $3 12 per day; 1 foreman of tinners, $2 50 per day; 1 assistant engineer, $3 per day.

The chief naval engineer is to have charge of all the engines and machines in the yard worked by steam, to keep them in good order and repair, to see that proper and efficient men are put in charge of the engines, and no more employed than are absolutely necessary. The naval engineer is to superintend the manufacture of all articles made in the above department, the fitting of steam engines, and all other matters in the equipment and repair of vessels coming within the duties of an engineer.

Upon the approval of the commandant he shall answer all requisi-

bility attached to the ordnance office. From this point a great deal of material is distributed to all parts of the Union; all the hemp for the navy is worked up here; and the breeching stuff and gun falls are constantly called for in large quantites at other stations. In view of all the extra duties attached to these establishments, it will be seen by reference to the rolls that the number of persons employed is small in proportion to the amount of duty performed, and everything is economically and efficiently conducted. In the journal of the yard will be found some recommendations with regard to removing the storekeeper from the building now occupied by the ordnance department, to enable the latter to get more room.

Office of inspector of provisions, &c —how performed.

The office of provisions and clothing is well managed, and on the general plan adopted at other yards, it is conducted economically and efficiently. It should, however, be enlarged, by turning the cooper out of the loft now occupied by him, and the loft should be taken possession of by the purser.

Warrant officer's berths filled by civilians.

All the berths of the warrant officers are filled by civilians with the exception of the gunner's and carpenter's.

It is recommended that the sail loft be given to a naval sailmaker, and the rigging loft to a boatswain; for though both of these departments are filled by most excellent workmen, (persons long connected with the service,) the board act on the just principle that officers who have faithfully performed their duty afloat, are entitled to these berths when they return from a long cruise; besides this, it conduces to the military organization of the yard, and the departments would be conducted more economically.

Police—its condition.

The police of this yard is very good and well arranged; the property throughout the yard is well protected, and the board have but one objection to make to this department, the want of a uniform to designate them and make their presence conspicuous.

Constructor's department—its duties and how performed.

The constructor's department is at present conducted by Mr. Simmons, the master carpenter, who seems very well satisfied that all the work done in his department is performed as economically as it is outside; but this opinion of the master ship carpenter is not concurred in by the board, as the men neither work so well, nor for so great a length of time. All the ship yards in and about Boston commence work in winter at sunrise, while at the navy yard the men commence an hour after. It would appear by reference to the rolls of the yard that there is not a very large number of men employed in the con-

structor's department in comparison with other yards—only seven hundred being employed on the Levant, Constellation, Hartford, Colorado, and Narragansett.

Erroneous views of the ship carpenter.

Mr. Simmons has fallen into the general error of constructors in supposing that his duties extend to matters which the board are of opinion that no constructor has any right to interfere with; he claims the superintendence of stowing hold and spirit room, coiling away hemp cables and hawsers, cleaning anchors and chains and stowing them, stowing provisions and making out requisitions for stores, &c.

This opinion of Mr. Simmons has only found expression since he has been acting in the capacity of constructor, owing to the death of a lamented constructor at the Boston yard, who was "theoretically and practically" subordinate, and who during the whole period of his service never exaggerated his importance by claiming one half of the duty now claimed by his master ship carpenter.

Ship carpenter's views insubordinate.

The board were not favorably impressed with the opinions of Mr. Simmons in regard to what he considered his duties; as, if he should persist in carrying them out, he would be continually brought in conflict with officers, who would not likely yield anything in a point of duty, where their rights are so plainly defined.

Ship carpenter—a good workman.

In other respects, as a ship carpenter, his character is good, and he has generally been considered a faithful public servant, though latterly rather disposed to make difficulty in matters of duty, which evidences a little insubordination not expected in a person bearing so good a reputation.

Timber inspector's department—abuses in.

Great abuses exist in the department of timber inspector, which is generally considered (or ought to be) as belonging to the constructor's department. The timber inspector has, by some means unknown to the board, obtained charge of a gang of men whom he selects and discharges as he may consider proper, sending in his requisitions of course. The number of men has been at times as high as 170, and consists now of 71 men, whose sole duty it is to take timber from vessels and stow it in the ship-houses, or take it where it is wanted. The result of this state of things has been an expenditure of $46,000 in the last year *for moving timber*, when the hull of the last vessel built cost but little more than that sum. In one instance it happened that thirteen men in the timber inspector's gang were employed (while the board were in session) all day in getting *one oak knee* into the water.

Timber inspector—recommends dismissal of.

The board recommend that the timber inspector at this yard be dismissed, he being, in their opinion, incompetent, and that another person be appointed who is a ship carpenter and fully competent to perform the duty; that he be attached to the constructor's department and allowed one writer only to keep the accounts.

No need of a gang of laborers.

So great are the abuses committed in the timber inspector's department, the board do not hesitate to recommend that all laborers necessary, when timber is to be moved, be procured from the gang of yard laborers through the executive officer, who shall exercise due caution in making the allowance, and see that the men are no longer employed than is absolutely necessary.

Storekeeper's department efficient.

The storekeeper's department of this yard is very well conducted in every respect, the storekeeper himself attending personally every day during office hours. The duties are performed economically and efficiently; but the board, acting on the principle that the office is a useless one, and not at all necessary for the service, recommend that it be abolished, and the duty assigned to an unemployed naval officer already receiving pay. The number of persons employed in this office is small, in comparison with other yards, but it should not be increased.

Mustering of men liable to abuse.

The manner of mustering the men in this yard is open to every kind of abuse. At no very distant period great frauds were committed in the Boston yard, owing to proper precautions not being taken in mustering the men. There are five mustering gangs situated in different parts of the yard, and the men may be seen, 25 minutes after bell-ring, straggling along to the shops. It is not possible that any commissioned officer could supervise an arrangement of this kind.

Two mustering points deemed necessary.

It is recommended that the mustering points be at once reduced to two, and these to be at the muster office, where they can be supervised by commissioned officers. The master workmen do not attend the muster, neither do the warrant officers of the yard, as they should do.

Master workmen—their character and efficiency.

The master workmen of the yard have, until the last few years, borne a high character for efficiency; but this state of things does not exist in all the departments just now, owing to several incompetent

men having obtained the positions of master workmen in the place of first rate men, some of whom are represented to be equal to any persons of their class in the State of Massachusetts.

Practice of removing good men deprecated.

In view of the injury done to the public service by the removal of those long-tried and faithful servants by some influence unknown to the board, they think it their duty (in justice to the men who have been removed, and in the hope that their representations may bring about good results) to ascertain whether the persons who have been able to get themselves appointed are as competent as the men who have been removed, or whether they are at all competent.

Former master blacksmith—his loss much felt. Present master blacksmith inefficient and insubordinate.

The former master blacksmith, Mr. Rice, is represented as one of the most faithful master workmen in the employ of the government. This sentiment is not confined to one or two persons, but is universal throughout the yard; and his loss has been represented as a serious one to the government. His absence has been made more apparent by the appointment of a person who, in addition to his inefficiency, is opposed to military rule in the yard, and is frequently absent from his post without permission from proper authority.

His removal recommended.

From information received by the board, they feel it to be their duty to recommend that the present master blacksmith be removed. They are convinced that good results will come out of this, if adopted. The foreman at present conducts all the duty, and the shop would be efficiently administered if left entirely in his charge.

Master painter holds the place of a good man discharged.

In addition to the above complaint is the removal of the master painter, another long-tried and faithful man, Mr. Cobb, who was superseded by a person whose incompetency is a by-word throughout the yard. Added to this incompetency is a dishonest discharge of his duty in the employment of a much larger number of men than were absolutely required, and through the assignment of high rates of pay to inefficient workmen. The board, being thoroughly convinced that the service will suffer from the inefficiency of the present master painter, and that he will continue to conduct his department improperly and dishonestly, recommend that his services be dispensed with.

Present master boatbuilder inferior to his predecessor.

Complaints in reference to the removal of the master boatbuilder have also been brought to the attention of the board; and though the

charge of inefficiency is not brought against his successor, he is still inferior to the person whose position he gained by improper influences, which this board is convinced are so detrimental to the efficiency of the yard that they should not be allowed to exist a day longer after being brought to the attention of the department.

Other master workmen good and efficient.

With the above exceptions the master workmen in this yard are exceedingly competent—are obedient to the requirements of the officers of the yard, and keep up good order throughout their respective departments. One or two may have more men in their employ than are required, but this can always be rectified by the commandant.

Organization of yard not good.

In view of the numerous defects in the system of this yard, its organization cannot be said to be good. The fire department is badly arranged; the engine and hose are defective; there are no hook and ladder companies, no fire-bills, or any systematic arrangement by which the men could be worked to advantage.

Fire department inefficient.

It was twenty-three minutes after the engines were directed to bear upon a certain point before the water began to play, and one of the buildings might have burnt down whilst the men were screwing on the hose. Much noise and confusion prevailed, owing to too much zeal in the men, who only need being taught to become aware that much more can be accomplished by system and silence, than by noise and confusion. It is recommended that the fire department of the Boston yard be properly organized, and printed fire-bills be hung up throughout the yard. At present the public property would stand but little chance of preservation, if it depended upon the yard engines and fire companies.

Officers' quarters—abuses in.

The board, on inquiring into the existence of abuses in or about the quarters of the officers of the yard, found nothing improper or inconsistent with the allowances and usages authorized for their accommodation, with the exception of an extensive green-house and grapery attached to the commandant's quarters, which can only be kept up by an annual expense of so great an amount as seems to the board an extravagance that should not be allowed; in nowise adding to the efficiency of this yard, or allowed in any other navy yard.

General appearance and efficiency of the yard.

The general appearance of the yard is good, and notwithstanding the defects in the system pointed out, the board feel assured that it is

an efficient naval establishment, and has within it all the elements to make it the most complete of its kind.

Its former exemption from political influences.

It has hitherto enjoyed the great advantage of not having attracted the cupidity of political aspirants for office. Men have grown up in the shops who understand perfectly how to carry on the work to the best advantage for the government. It was felt that at least in one navy yard in the country the officers were supported in the proper exercise of their duties, and that faithful master workmen were allowed to reap the reward for their services by retaining their positions during good behavior.

Evils resulting from a change in this respect.

The effect of a change on the old condition of things is now apparent throughout the shops. A master workman of good standing does not know how soon he may lose his place, and commences truckling to his foremen. A foreman, who for years past has been happy in his position, aims at getting the place of the master workman. Quartermen try to work out the foremen; and the journeymen mutiny against the quartermenas much from the example set them in higher quarters as from any other cause.

Evils of a recent date—how to correct.

All these evils are comparatively of a late date, and are constantly increasing. They can be put a stop to only by adopting the recommendations to be found in the summing up of the board.

The board subjoin a list of the master workmen and others, which they recommend should be employed in the several departments of the yard.

We have the honor to be, very respectfully, your obedient servants,

F. H. GREGORY, *Senior Officer.*
G. J. VAN BRUNT, *Captain.*
C. H. POOR, } *Commanders.*
JOHN R. TUCKER, }
DAVID D. PORTER, *Lieutenant.*

Hon. ISAAC TOUCEY, *Secretary of the Navy.*

The following is a list of master workmen, clerks, writers, and other employés, which the board recommend should be allowed at the Boston navy yard:

COMMANDANT'S OFFICE.

One clerk to commandant, $1,200 per annum; one second clerk, $960 per year; one porter, $456 per year; one messenger, $1 25 per day.

ORDNANCE OFFICE.

One writer, $2 50 per day; one writer, $2 per day; one foreman of gun carriages, $3 12 per day; one messenger, $1 25 per day.

COMMANDER'S OFFICE.

One messenger to attend on commander's and first lieutenant's office, $1 25 per day.

MASTER OF THE YARD.

Two master's mates to look after the yard laborers, each, $2 per day. The offices of boatswain, gunner, carpenter, and sailmaker to be filled by naval officers. One foreman of riggers, $2 50 per day; one foreman of sailmakers, $2 81 per day.

CONSTRUCTOR'S DEPARTMENT.

One draughtsman, $2 81 per day; one clerk, $800 per annum; one writer, $2 per day; one office attendant, $1 25 per day; one master carpenter, $4 per day; one writer to master carpenter, $1 50 per day; one master ship joiner, $3 50 per day; one foreman to assist and work, $2 81; one laborer to clean up, $1 25 per day; one master blacksmith, $3 50 per day; one foreman to assist and work, $3 12 per day; two laborers to clean up, each $1 25 per day.

CONSTRUCTOR'S DEPARTMENT.

One master boat builder, $3 50 per day; one leading man to work with tools and receive 25 per cent. addition on 1st class journeymen's pay; one laborer to attend and clean up, $1 25 per day; one master caulker, $3 50 per day; one master mastmaker, $3 50 per day; one master painter, $3 50 per day; one leading man to assist and work and to receive 25 per cent. advance on 1st class journeymen's pay; one laborer to work and attend in the shop, $1 25 per day; one master blockmaker, $3 50 per day; one leading man to assist and work and receive 25 per cent. addition on 1st class journeymen's pay.

CONSTRUCTOR'S DEPARTMENT.

One laborer in blockmaker's shop, to work and clean up, $1 25 per day; one foreman of sawyers, $2 50 per day; one foreman of coopers, $2 50 per day; one inspector of timber, $1,050 per annum; one writer to the inspector, $2 per day.

STEAM ENGINEER'S DEPARTMENT.

One chief naval engineer; one draughtsman, $2 81 per day; one draughtsman, $2 50 per day; one writer, $2 per day; one laborer as

office attendant, $1 25 per day; one foreman of machinists, $3 per da one foreman of boilermakers, $3 12 per day; one foreman of moulde $3.12 per day; one foreman of plumbers, $3 per day; one forem of coppersmiths, $3 12 per day; one armorer, $2 81 per day; o tinner, $2 per day; one 1st assistant engineer, $3 per day; one assistant engineer, $2 per day.

The master machinist now receives $2,000 per annum, and hol the position the board propose under a general rule shall be fill by a naval engineer. If the department sees fit, the machini might be retained with advantage to the government, (under the e gineer,) on his present pay. The chief naval engineer is to ha charge of all the engines and machines in the yard worked by stea to keep them in good order and repair, and see that proper men, a no more than necessary, are employed. He is to superinted the ma ufacture of all articles in the above departments, the fitting of stea engines, and all matters connected with the equipment and repair ships, coming within the duties of an engineer. Upon the comman ant's approval, he will answer all requisitions in the several depar ments and render to each accurate accounts of costs, &c. The nu ber of firemen and coal-heavers to be regulated by circumstances.

ROPEMAKER'S DEPARTMENT.

One master ropemaker, $5 per day; one foreman, $2 76 per da two quartermen, $2 50 per day.

There are too many men, in the opinion of the board, employed the ropewalk. They feel convinced that fifty efficient men, proper classed and kept faithfully at work, will be able to meet all the prese wants of the service. This opinion is based on what *has been done times past.*

CIVIL ENGINEER'S DEPARTMENT.

One civil engineer, $2,000 per annum; one draughtsman, $900 p annum; one writer, $2 per day; one laborer, office attendant, $1 per day; one master mason, $3 50 per day.

One quarterman to every thirty men employed, and such addition quartermen as the civil engineer, with the sanction of the comman ant, may deem necessary. The quartermen to receive twenty-fi per cent. addition on first class journeymen's pay, provided it does n exceed fifty cents per day.

INSPECTOR OF PROVISIONS.

One clerk, $750 per annum; one writer, $2 per day; two receivers each $2 per day; two assistants, each $1 50.

PURSER OF THE YARD.

One clerk, $750 per annum; one writer, $2 50 per day; one mes senger, $1 25 per day.

CLERK OF THE YARD'S OFFICE.

One clerk, $1,200 per annum; one check clerk, $2 50 per day; one writer, $1 50 per day.

STOREKEEPER'S DEPARTMENT.

One chief clerk, $1,200 per annum; one second clerk, $900 per annum; one writer, $1 75 per day; one receiver, (weigher of coal,) $2 per day; four laborers, each $1 26 per day; one messenger, $1 26 per day; one head teamster, $2 per day.

POLICE.

Three captains, (1st, 2d, and 3d,) each $1 75 per day; twenty-two watchmen, $1 50 per day.

GARDENERS.

One gardener to commandant, $1 50 per day; one gardener to commandant, $1 25 per day; one gardener to commander, $1 25 per day; one gardener to lieutenant, $1 25 per day; one gardener to surgeon, $1 25 per day; one gardener to purser, $1 25 per day.

The gardeners are not to be employed from the first November to the first March.

In the foregoing schedule, the ordinary men and persons belonging to the dispensary are not included; nor are mechanics, laborers, teamsters, &c., as many of whom shall be employed at the usual rates as the commandant may deem necessary.

No. 5.

NAVY YARD AT PORTSMOUTH.

WASHINGTON, D. C., *June* 20, 1859.

Sir: Having concluded the investigations in this navy yard, we have the honor to make the following report:

There are many reasons which make this yard to differ from the yards on other stations. In the first place, it is isolated; not situated near a large city or district where politics run high, and there is but little effort made to get men employed who have no merit beyond possessing the privilege of voting. The government, in consequence, secures the best kind of labor.

The authority conferred on master workmen to select their own men is here not so much subject to abuse as in other yards. The master workmen are at times requested by politicians to get employment for

certain persons, but feeling pretty sure of being supported in case of a refusal to comply, they consult the interests of the government, both in the number and quality of the men they employ. The result is, that there are fewer men employed in proportion to the work going on than in any other yard. For instance, in the Philadelphia yard, a smaller establishment than the Kittery yard, there are employed in the blacksmith's shop ninety-eight persons, with a daily pay of $175 42, while in the Kittery yard, there are employed twenty-six persons, including every one, with a daily pay of $50 03, and so on throughout every department, while in fact there is no more work going on in Philadelphia than at this station. The difference in the number of persons employed, and the amount of work done, is easily accounted for by a reference to the evidence given by the master workmen of the Philadelphia yard, particularly the master blacksmith.

The third reason why a more thorough state of discipline can be kept up is, that the officers all live in the yard, in quarters built by the government. The consequence is, that every one is at all times expected to be on duty, the customs assimilating as much as possible to those in force on board of ships of war.

The fourth reason is, that the workmen employed in the Kittery yard are a much superior class to the floating population found about our large cities, who seek temporary employment there as circumstances may require, and who do so with a full determination not to give the government their full time,

The fifth reason is, that no member of Congress or other person has ever endeavored to influence the master workmen to take in men when they were not wanted; and it is not likely that men would be taken on, if any attempt of the kind was made.

To say that there are no abuses of any kind in the Kittery yard, would be attributing to it an excellence not likely to be met with in so large an establishment; but what abuses there are, can easily be controlled by the authority of the commandant whenever he thinks proper to exercise it.

By misconstruction of the circular addressed to constructors, that officer has been permitted to exercise an authority which does not of right belong to him, and which should more properly be exercised by the naval officers of the yard. The construction and repairs of ships properly belong to constructors who have made it their particular study, but the rigging, equipping, stowing of ballast, tanks, spirit-room, chain cables, stores, provisions, filling water tanks, &c., cleaning rust off of anchors, chain cables, &c., &c., more properly belong to the duties of the executive officer, first lieutenant, and master of the yard. To the latter, also, belongs the duty of making out requisitions for stores and equipments in the master's department, but all the duties above mentioned have gradually been considered part of the duty of the constructor, have been indifferently performed owing to his numerous obligations, and in consequence those officers of the navy whose duty it was to attend to those things, have been left with little to do, their influence weakened in a military point of view, and their work narrowed down to the performance of some trifling polic

duties, which scarcely secured them from being considered as holding perfect sinecure berths.

The result of the above arrangement has been detrimental to the discipline of the yard. It places the constructor in a position that should never be occupied by any one but the executive officer; and the naval officers could only stand and see abuses committed without being able to prevent them. There have been occasions when the orders of the executive officer have been disobeyed knowingly and wilfully by the employés of the constructor, under the impression that his orders were paramount to all others emanating from any quarter whatever. This state of things is very detrimental to the public interest, and would, if persevered in, be ruinous to the discipline of the yard. It has the effect of bringing the authority of the commandant into disrepute, and increase the expense of fitting out a ship, by having persons to attend to it who do not know theoretically or practically anything about the matter. As a proof of this, the sloop "Portsmouth" was fitted out at this yard by the men belonging to the constructor's department, her ballast, tanks, spirit room, cables, provisions, and water, all stowed by his men, and not overlooked by any naval officer belonging to the yard.

The stowage of the ship's hold, spirit room, and chain-lockers, cost $1,293 45. There were forty-three days' work charged for the carpenters, at $2 per day, and forty-six days' work for carpenters' laborers, at $1 25 per day, merely for "stowing and whitewashing tanks and ballast;" all of which could have been done for one-half of the money. The chain cables of the ship were cleaned, painted, and put on board at a cost of $693 75. Men were employed on the chains cleaning them without any one to look after them, and consequently neglected their work. This kind of duty should be done by the yard laborers, under the orders of the executive officer, passed through the first lieutenant or master of the yard. Independent of the expense liable to occur in these little matters, there is a danger of things not being properly put on board by persons who have little experience about the requirements of a ship, as occurred in the case of the "Portsmouth." The chain cables were in one instance put on board the wrong end first, and paid down without shackling to the keelson. The result might have been a loss of chain and anchor, if not the loss of the ship. The error alluded to was, however, rectified before the ship went to sea.

Whatever may be the capacity of naval constructors to do all the duty of fitting out ships, the board concur that his duties are sufficiently arduous if he attends faithfully to the construction and repairs. His time is too much occupied to attend to any part of the equipment, and though he may be called on at any moment to perform certain duties in that line, or to have it done by persons in his department, he should do it under the direction and supervision of the commandant of the yard or his representatives.

The engineer's department, though apparently well conducted, is not properly organized. In other yards the yard laborers are placed under the direction of the master or first lieutenant, who details them at the muster office for their daily duties, and looks after them when employed at their work. In this yard all the yard laborers are placed

under the engineer's direction, or the direction of the master mason, who acts also as master laborer. There should be a change in this respect, so as to have the yard laborers taken on by the executive officer, or first lieutenant. Frequently there are occasions when seafaring men could be advantageously employed working about a ship at $1 25 per day, while now, if there is occasion to employ a yard laborer, it is some one who does not know anything about a ship, and works to great disadvantage. They are selected by the engineer more with respect to his own work than with regard to handling stores in the hold of a ship, carrying out warps, or fastening chains. Moreover, if the yard laborers were taken on by the executive officer it would prevent the employment of so many men. The engineer very naturally leaves it to the master laborer, (or, at present, to the master mason,) who, being a most excellent man, would not likely abuse the authority, or act otherwise than for the interest of the government; but the principle is a bad one, and ought to be abolished.

The storekeeper's department here is in good condition, but the duty is all done by the chief clerk, there being no actual necessity for a naval storekeeper. The naval storekeeper can scarcely be said to come within the rules for the better discipline of the yard, as it does not appear that he is constantly at his post, nor does he remain during office hours when he does come. There is no complaint made, however, by the commandant relative to the non-performance of his duties. He states that he attends properly to them, and is satisfied with his performance. The storekeeper's chief clerk, who is more intimately associated with him in the office, is, however, of a different opinion, and considers that his absence will make no difference in carrying on the duties, and thinks his office a sinecure. It seems to the board, as a matter of economy, a useless office should be done away with; for every useless office only multiplies indefinitely the expenses of the yard. In point of expense, however, (in clerical assistance and labor,) the storekeeper's department has compared very favorably with that at other yards, not one-third the force being employed here.

When the buildings at present going up and appropriated for are completed, the board are of opinion that no more structures of any kind should be built in the yard until absolutely required by the wants of a larger navy than we now possess. Those already constructed are sufficient in size and number to form a nucleus to which others can be quickly added in case of a war, or the apprehension of one.

The floating dry dock at this place, as at present conducted, is more expensive than it should be. Though the whole amount expended in docking ships during the last fiscal year amounted to only $1,201 27, it ought not to have amounted to more than half that sum.

If ships were constantly being docked under the present arrangement, it would become a very expensive thing. There is a dock-master whose duty it should be to get the dock out and in; to have the selection of the men who are to assist him; and to act under the direction of the executive officer, or the first lieutenant of the yard. He certifies (and no doubt truly) that he could reduce the expense of docking a ship one-half, if he was not subject to so many different orders, or heads of departments. The boatswain, from being called in once or

twice to assist in securing the dock, when there were no piers or stone blocks for it to rest against and be secured to, has become a regular employé when the dock is being moved, and generally assists with a larger gang of riggers, who are paid at high rates. At times it is necessary to put down and take up moorings, and only then is the boatswain and his gang required. In the docking of the "Mohican" lately, the putting out of moorings and docking steamer amounted to $120 40, and $36 25 for taking up moorings—the largest item in docking her, and a very unnecessary one. If the proper kind of moorings (one fluke anchor) were put down and kept there, the boatswain's men would not be required. Not being limited in the number of his men at the time mentioned, he swelled the list up to 79½ days' labor.

It is recommended that the abuses in the dock department be looked into and rectified. If the dock-master is to have the management of the dock, under the direction of the executive officer, he should not be interfered with by any one else, and no more men should be employed in the management of the dock than he requires. If he has no such authority, his office is not necessary, and he should be removed.

In mentioning the above abuses the board are pleased to say that they are the only ones coming within their knowledge, and they are of opinion that they can be corrected by the authority of the commandant when his attention is brought to the subject. In every department of the yard, the number of men at present employed seems so small in comparison with the number employed elsewhere, that the board might well be satisfied in making no recommendation for a change; still the present system leaves an opening for more men being employed in some departments than would be absolutely necessary.

The timber inspector has, like the timber inspector at the Boston yard, a gang of men whom he requires, like the head of any other department, and, and to avoid sending his requisitions for labor to the executive officer, they are sent through the constructor to the commandant direct. No timber should be moved on the yard except by yard laborers detailed for the purpose This would enable the executive officer of the yard to know when a job of this kind commences and ends, and would put an end to that kind of patronage which increases so much the expenses of the navy yards. The timber inspector should properly be attached to the constructor's department, and be allowed a competent writer, at $2 per day, to keep his accounts. The nature of his duty absolutely requires it.

In drawing a comparison between the amount of labor done in the Kittery yard and other yards, preference must be given to the former by a large per centage—at least this seems to be the case at present. Whether it has been so heretofore the board are unable to say. In looking over the back rolls there seems to have been a larger number of men employed on the steamer Mohican than was justified by the size of the vessel or the time consumed in building her. Eight hundred men or more were at work on the yard at one time, and 303 employed on the hull, rigging, sails, ordnance and equipments of that vessel. So many men could not very well work economically for the government, and would not likely be looked after; nor would they do as much work in proportion as would be done by a smaller number.

In case of war, so large a number might be required; but there does not seem to have been sufficient despatch made to justify the number of workmen employed.

The efficiency of this yard, is owing, in a measure, to the able master workmen and class of mechanics they employ. The plan adopted here is to make all the master workmen, with the exception of sparmaker, caulker, and shipcarpenter, responsible directly to the commandant, and to be under the direction, for the time being, of the chief of any department for whom they may be employed.

There is no clashing whatever of duties, and the plan works well; still the board considers it advisable that it should be arranged according to the method recommended for all other yards in the summing up. It has been suggested to have one mechanical head (the constructor) through whom all orders should pass, but such an arrangement has the objection of transferring more duty to one person than he can properly attend to, and would tend to make the commandant less familiar with what is going on than he is at present.

The plan of mustering the men in the Kittery yard is the best the board have met with, and it would be well to adopt it in all the yards, if nothing better can be thought of.

There are but two mustering points close to each other, and only one when the number of men does not exceed 500. The clerk of the yard and his assistants muster all the men, and each master workman stands by with a check book and checks them off, which is also done by the warrant officer of the yard, the boatswain, gunner, carpenter, and sailmaker. The second lieutenant of the yard stands by to preserve order, and see that everything is conducted properly.

One large item of expense is the hiring of cattle, instead of purchasing them; this is done by an order from the Bureau of Yards and Docks, under a mistaken idea that it is the most economical plan. At present there are twelve oxen belonging to the government which perform the general labor of the yard, and when more are required they are hired. The cost of hiring one team, with a man to drive it, is $5 per day. This in four months amounts to $520. The value of one good team is $450, and the cost of feeding them four months is $56, making $506; consequently the money expended in hiring cattle would amount in four months to more than the cost of a first rate team, which the government would own, and would be able to sell (when not required any longer) at an advance of ten per cent. on the original price.

It does not appear, on investigation, that the wages paid by the government are regulated by those paid in private ship yards, or workshops, nor could it always be so arranged. There is generally very little ship building going on in and about Portsmouth, and the work outside the yard is of an inferior kind to that inside. It does seem though that more men are employed on the hulls of public ships, in proportion to the rapidity of the work, than are employed in private yards, and some rule should be adopted by which a certain amount of labor might be allowed (under ordinary circumstances) in proportion to the size of the vessel to be built.

There is a number of men employed in this yard called "ordinary

men," whose duty it is to take care of ships in ordinary, attend at the stables at night and on Sundays, and perform general duties about the yard; owing to the smallness of pay good men cannot always be induced to enter, and when they do enter they do not always care to continue in employment longer than one year; a little addition to their pay would induce a more efficient set of men to enlist, and the board recommend that the carpenter's mate, cook, seamen, and ordinary seamen, receive the same rates of pay which are at present allowed in the naval service.

No particular cases of abuse having come before the board beyond those already enumerated, they can only make general recommendations with regard to this yard.

The first step towards a perfect organization would be, to place the military authority on a basis that would admit of no doubt as to its power; there are now good regulations, which, if properly enforced, would bring about a proper state of things, but they should apply to every person in the yard, or working there, in the employment of the government. No civilian should be exempt from obedience to those regulations any more than an officer of the army.

The fitting out of ships should be done by orders of the commandant, under the supervision of the executive officer, first lieutenant, and master; in that respect, the above officers have been placed in a subordinate position, detrimental to the discipline of the yard, which was rectified, however, when brought by the board to the notice of the commandant.

Although the number of men employed in the Kittery yard does not appear large, in comparison to others, it can, without doubt, be still further reduced with advantage to the government; fewer foremen and quartermen can be employed; and, in some cases, quartermen can be dispensed altogether. The timber inspector's gang can be done away with altogether, by the substitution of one or two horses to haul the timber, and employing men from the yard (laborers) to handle the same; the cost of hauling timber in this yard in the last year, from July 1st to April 1st, is $10,133 93. Experience proves that work of that kind can be performed cheaper when the executive officer of the yard has it done under his supervision.

The executive officer of the yard being frequently placed in the position of commandant, and being expected to carry out his orders, should be invested by the commandant with sufficient authority to enable him to correct any abuse that might spring up in the yard; his authority should never be questioned, except by the commandant himself, and he should feel that it was his right to interfere in any matter where the interest of the government was at stake. The position of every officer in the yard should be so well defined that prompt obedience would be the result of every legal and proper order given to any one subordinate to them.

The general appearance of the yard is good, and the buildings are well adapted for the purposes for which they were intended. The police is fair, and, with one or two exceptions, composed of good men; it is defective, inasmuch as there is not a captain of the watch, whose duty it should be to answer for the police, make details and morning

reports. There is no uniform in the police, nor any mark to distinguish them.

The fire department cannot be said to be well organized, the men not having been sufficiently drilled; the fire apparatus is not sufficient for the protection of so much public property—one more engine is required. There are no hook-and-ladder trucks, nor are there any persons stationed as hook-and-ladder men.

The organization of the yard can scarcely be called good while any of the authority belonging to the naval department remain in the hands of the civil department.

This is the case now; for, practically, two civil departments of the yard have everything under their control, and the naval officers confined to trifling police duties. When this is rectified, there will be nothing to complain of, except the general defect existing in the system by which navy yards are at present governed.

Annexed is a schedule of the master workmen, clerks, writers, and others, which the board recommend should be employed in the various departments of the Portsmouth navy yard.

We have the honor to be, very respectfully, your obedient servants,

F. H. GREGORY, *Senior Officer.*
G. J. VAN BRUNT, *Captain.*
C. H. POOR, *Com'd'r U. S. Navy.*
JOHN R. TUCKER, *Com'd'r U. S. Navy.*
DAVID D. PORTER, *Lieutenant.*

Hon. ISAAC TOUCEY, *Secretary of the Navy.*

List of master workmen, Clerks, and others, which the board recommend should be employed at the Portsmouth navy yard.

COMMANDANT'S OFFICE.

1 chief clerk $1,200 per annum; 1 writer $1 75 per day; 1 porter $456 per annum; 1 messenger 75 cents per day.

ORDNANCE OFFICE.

1 writer $2 50 per day; 1 foreman of gun-carriages $3 12 per day.

COMMANDER'S OFFICE.

1 messenger $1 25 per day.

The offices of boatswain, gunner, carpenter, and sailmaker to be filled by naval officers; 1 foreman of riggers $2 50 per day; 1 foreman of sailmakers $2 81 per day.

MASTER OF THE YARD.

1 master's mate to look after yard laborers, &c., $2 per day.

CONSTRUCTOR'S DEPARTMENT.

1 draughtsman $900 per annum; 1 clerk $800 per annum; 1 office attendent $1 25 per day; 1 foreman of ship carpenters $3 50 per day; 1 master joiner $3 50 per day; 1 foreman $2 81 per day; 1 laborer to clean up $1 25 per day; 1 master blacksmith $3 50 per day; 1 foreman to assist and work $3 12 per day; 1 laborer in shop to clean up $1 25 per day; 1 master boatbuilder $3 50 per day; 1 leading man to work with tools, and receive 25 per cent. addition on first class workmen's pay; 1 master caulker, when wanted, $3 50 per day; 1 master mastmaker $3 50 per day; 1 master painter $3 50 per day; 1 leading man to assist and work, and to receive 25 per cent. addition on first class journeymen's pay; 1 laborer to work and clean up shop $1 25 per day; 1 foreman of coopers, to be employed when required, $2 50 per day.

INSPECTOR OF TIMBER'S OFFICE.

1 inspector $1,050 per annum; 1 writer $2 per day.

MACHINIST'S DEPARTMENT.

1 master machinist $3 50 per day; 1 quarterman $2 81 per day.

CIVIL ENGINEER'S DEPARTMENT.

1 civil engineer $1,800 per annum; 1 draughtsman $900 per annum; 1 master mason $3 50 per day.

One quarterman to every thirty men employed, and such additional quartermen as the civil engineer, with the sanction of the commandant, may deem necessary; to receive 25 per cent. additional on first class journeymen's pay, provided it does not exceed 50 cents per day.

PURSER OF THE YARD.

1 clerk $750 per annum; 1 messenger, to act for lieutenant also, $1 25 per day; 1 clerk of the yard $1,200 per annum; 1 check clerk $2 per day; 1 writer, and to assist the master, $2 per day.

STOREKEEPER'S DEPARTMENT.

1 clerk $900 per annum; 1 writer $2 per day; 1 receiver $1 75 per day; 1 laborer $1 25 per day; 1 dock master $1,000 per annum.

TEAMSTER'S DEPARTMENT.

1 head teamster, to be paid Sundays, $2 per day.

POLICE.

1 captain $1 75 per day; 12 watchmen $1 50 per day.

In the foregoing schedule are not mentioned the ordinary men, or persons belonging to the dispensary, and don't relate to mechanics, laborers, teamsters, &c., as many of whom may be employed, at the usual rate of wages, as the commandant may deem necessary.

No. 6.

NAVY YARD, WASHINGTON.

WASHINGTON, D. C., *June* 20, 1859.

SIR: On the 1st of June the board commenced its investigations at the Washington navy yard.

Captain Buchanan having but lately taken command, they have depended chiefly on Commander Turner to point out such abuses as may exist, or may be likely to exist, owing to any want of system in the present organization of the yard. Commander Turner, with an honest sincerity, left nothing undone to give the board every information they required; and they were pleased, after going through the other yards and witnessing such a want of harmonious action, to find it existing in a good degree in the Washington navy yard.

One of the largest establishments in the yard is under the immediate control of an officer of the navy, (with other naval officers under him,) who may be said in fact to be the mechanical head of the department, and holds the same relation to his men as the master workmen do in other workshops. This department is conducted with perfect system, and is under strict discipline; the result is, an establishment of this kind infuses a spirit in surrounding shops which is taken up or finds its way into other departments of the yard. This, added to a constant intercourse between the master workmen and the naval authority, to whom the latter have to go direct for anything they may require in their respective departments, has placed matters on a very fair military footing.

There is no constructor's department in this yard, nor any permanent civil engineer's establishment, which accounts, in a great measure, for the absence of many of those irregularities existing in some of the other yards. Ships are only occasionally built here, and the construction of buildings is done under the supervision of Mr. Sanger, the chief civil engineer, who is so identified with the navy that he has its best interests at heart, and would not lend himself to any abuse.

The result is a military organization, or as near an approach to it as can be found under the present system. Every requisition in the yard goes through the executive officer direct to the commandant—every workshop visited daily by the executive officer or first lieu-

enant; the work going on inquired into and all information promptly given by master workmen and foremen. The prices of articles are ompared with previous work, and it is believed that everything is onducted, as far as it can be under the present system, with a due egard to economy and efficiency.

The naval engineer's department is not, however, arranged as it hould be. At present he has a nominal supervision only over the ngines and boilers under construction, and over the steam engines enerally, whereas he should have the entire charge (under the commandant) of all steam engines and their dependencies, machine shop, he casting, moulding, &c., and hold the same position as it is proosed shall be held by the naval engineers in the Boston, New York, nd Norfolk yards; bringing all the departments connected with team under one mechanical head, who can see that proper men are elected to perform certain duties.

Although the present engineer has been attached to this yard five r six years, he does not feel that his authority allows him to select a ingle mechanic, though he is held responsible for the faithful performance of the work, and for an economical expenditure of the appropriations. As an instance of how wrong the policy is of giving master workmen or foremen the power of saying "how many" and "what men" shall be employed, the naval engineer testifies that, owing to the number and incompetency of some of the men employed, the Minnesota's boilers cost $15,000 or $20,000 more than a pair of the same kind furnished to the government by Merrick & Sons—all of which was caused by the engineer not possessing the power to discharge an incompetent foreman. An expense not quite so great has lately occurred in the construction of the boilers for the steamer Pensacola, owing to mistakes committed by the boiler-maker and his careless manner of performing his duties. The engineer admits that he had not sufficient control to prevent this unnecessary expenditure of money.

The naval engineer of this yard feels himself competent to direct all the various operations of a machine-shop, having worked twenty-one years in machine and boiler shops before he entered the navy, and seventeen years of his life have been passed superintending like employment under the government.

In view of the great expense and inconvenience attending the building and equipping of ships at a point so distant from the sea, and the delays consequent on the difficulties of navigation in getting ships to sea after they are built, it is recommended by the board that this yard shall be used altogether for manufacturing anchors, cables, steam engines and boilers, copper rolling, copper bolts, ordnance material of all kinds, including guns of different calibres, and all the *et ceteras* which are now being made at the yard; and they strenuously recommend that no more vessels of war be built here, and they further recommend that all departments connected with the construction of ships be suspended.

The ordnance department at this yard differs from the establishments, so called, in other yards. The object for which it was originally started under Commander Dahlgren was for making experiments of all kinds in regard to any matter relating to ordnance equipments

and the improvement of ordnance generally; but so much has the time of the ordnance officer been taken up of late with administration and detail duties, that the experimental duty has been neglected almost altogether. So much unnecessary form has grown up, that, by attention to the details of his office, his time cannot be devoted to what is considered the most important part of his duty.

Considering that the primary purpose of this establishment was an experimental one, the officer in charge should be allowed full scope to investigate such questions as he may think necessary, and the largest latitude should be allowed with a due regard to the efficiency of this important branch of the naval service.

The ordnance officer cannot possibly be expected to attend to the experimental part of his duty until relieved from the multiplicity of forms by which he is surrounded.

In the adoption of guns for the naval service, the character of equipments, and all the knowledge necessary to be obtained on so important a subject, the government cannot extend too much liberality towards a department on the proper organization of which depends our future success in naval warfare. We may spend millions in ships and steam engines, and have the best officers and seamen in the world, but if the principal means of annoying an enemy are defective, the ships are almost useless; or, if the guns are perfect, and sufficient attention has not been paid to obtain all the knowledge requisite for their complete management, a large degree of responsibility will rest somewhere. So rapid are the changes going on in ordnance matters, and so great are the improvements in foreign navies that it requires all the time, with the small means at the disposal of an experimental ordnance officer to make even an approximation to the wants of the navy. At the same time, the board are of opinion that as far as the character of our ordnance and the quality of its material is concerned, we are equal, if not superior, to any navy afloat. For this superiority, if it does exist, we are in a great measure indebted to the officer in charge of the experimental department in the Washington yard. Some of the officers in charge of the Bureau of Ordnance have aided and encouraged this officer in every way, by giving him the largest latitude, which it would be well still to extend to him. He should be relieved from useless forms, the organization of his department left entirely to himself, and the experimental part of it detached from all connexion with the yard.

No one officer of the navy has had more experience, or devoted more time to the subject of ordnance, ordnance equipments, and improvements in guns generally than the present experimental officer; and, as the subject is one of deep interest to him, and he could explain his own views better than could be done by the board, they recommend that any ideas he may suggest for the improvement of his department be carried out as far as it may be practicable.

The board think it would be advantageous to the navy if a number of clever young officers should go through a course of experimental instruction under the present ordnance officer of the Washington yard, for the purpose of transmitting the information they may obtain to those growing up under them, and it is recommended that he may be enabled to secure the service of such officers as may make themselves

conversant with the duty, and who should not be detached from the duty at any time when it might interfere with the efficiency of the department.

In connexion with this subject, the board do not consider it out of order to draw your attention to the fact that, with the beautiful arms that we have in the service, there is no system of teaching adopted in our navy by which more than a moderate degree of efficiency can be obtained for want of a practice-ship, and they mention the circumstance without making any further suggestions on the subject.

In conclusion, it is recommended that the ordnance department of the yard be first organized as an originating department, giving such an extension to each part of it as the wants of the service may require. It should furnish a portion of the supplies to the navy, and the standard of similar supplies to be made elsewhere. The officers should serve on the shore duty only after having served in the practice-ship; and it is important that they should be *required* to serve on shore after service in the practice-ship. From the class of men instructed after the requirements of the experimental department qualified captains of guns, gunners, boatswains, and other warrant officers, besides many advantages known only to officers of the navy, would grow up at once from such an establishment.

To relieve the experimental officer from all care and responsibility of the stores and a large portion of the administrative duties of his office, it is recommended that a naval officer be appointed under the experimental officer, who shall take charge of all material after it is manufactured, keep all the books connected with the ordnance department, make out and sign invoices, &c., and give such receipts as may be required, and that the clerical force necessary for this purpose be taken from the number now employed in the experimental department.

The plan of mustering the men is as defective here as it is anywhere in respect to the master workmen not attending to muster, otherwise it seems to be as well conducted as it can be under the present system. No abuses are complained of by the officers.

The storekeeper's department is in good order, and the present storekeeper has the reputation of attending faithfully to his duties, and is spoken of personally by the officers of the yard in high terms. His department is conducted economically as well as efficiently.

The police of the yard is not considered good, some old and inefficient men being employed, and the power of appointing the watchmen is not vested in the commandant, a rule that prevails in this yard only. The police have no designating mark, and do not present a respectable appearance.

The master workmen are, generally speaking, long-tried, faithful, and efficient men. The boiler-maker, however, must be considered one of the exceptions on the score of efficiency, much complaint having been made against him by the naval engineer for careless workmanship, inattention to duty, and employing more men than were absolutely necessary, by which the boilers of one ship cost some $15,000 more than a pair of the same kind furnished by a private establishment.

The board, therefore, recommend that he be dismissed from his present position.

The master joiner is also another exception. Not having a proper appreciation of the military authority of the yard, he is not considered a fit person to hold a position therein, and the board recommend that he be removed.

The general organization of this yard is better than is usually to be found in navy yards, and no doubt is as good as can be found under the present system. The general appearance of the yard is good, public property seems to be well taken care of, and the fire department, barring too much noise, seems to be in excellent condition.

When the new fire-plugs are finished the entire property in the yard will be in very little danger from fire. There are, however, no hook and ladder trucks, and the men are not stationed in hook and ladder companies.

In conclusion, the board are of the opinion that this yard could be brought into a very good state of discipline; but to enable the commandant to make it entirely an efficient and economical establishment, the board recommend that he be supported firmly in removing any one who is not willing to subscribe to the rules and regulations of the yard, who is in any way inefficient in the performance of his duty, or who has in any manner rendered himself obnoxious to the authorities of the yard.

We have the honor to be, very respectfully, your obedient servants,

F. H. GREGORY, *Senior Offifer.*
G. J. VAN BRUNT, *Captain.*
C. H. POOR, *Com'dr U. S. Navy.*
JOHN R. TUCKER, *Com'dr U. S. Navy.*
DAVID D. PORTER, *Lieutenant.*

Hon. ISAAC TOUCEY, *Secretary of the Navy.*

List of master workmen, clerks, writers, and others, which the board recommend should be employed in the Washington navy yard:

COMMANDANT'S OFFICE.

One clerk, $1,200 per annum; one clerk, $960 per annum; one porter, $456 per annum; one messenger, $700 per annum.

ORDNANCE DEPARTMENT.

One clerk, $3 25 per day; one draughtsman, $3 per day; one writer, $2 50 per day; one foreman of brass foundry, $2 75 per day; one foreman of gunners, $2 25 per day; one foreman of laboratory, $2 25 per day; one foreman of ordnance, $3 per day; two foremen of ordnance, each, $2 50 per day; one pyrotechnist, $1,500 per annum; one keeper of magazine, $480 per annum.

COMMANDER'S OFFICE.

One messenger, $1 25 per day.

LIEUTENANT AND MASTER'S OFFICE.

One writer, $2 per day; one messenger to attend the offices of purser and civil engineer also, $1 25.

The offices of boatswain and gunner to be filled by officers of the Navy.

MASTER OF THE YARD.

Two master's mates to assist the master laborer to look after the yard laborers; one at $3 and the other at $2 per day.

MASTER WORKMEN.

One master chain-cable and anchor maker, $1,250 per annum; one superintendent of forge shop, &c., $3 50 per day; three foremen, $3 12 per day; two foremen of chain-cable shop, $3 12 per day; one master tank-caboose maker, $1,250 per annum; one foreman copper refiners, $3 25 per day; two foremen, $2 81 per day; one foreman brass founders, $2 81 per day; one master joiner, $3 50 per day; one foreman to work with tools, $3 per day; one master painter, $3 per day; 1 foreman of carpenters, $3 12 per day; one foreman of sawyers, $2 50 per day; one foreman of wheelwrights, $2 81.

STEAM ENGINEER'S DEPARTMENT.

One naval engineer, $2,000 per annum; one draughtsman, $3 per day; one writer, $2 per day; one attendant in office, $1 25 per day; one master machinist, $1,500 per annum; one foreman, $3 per day; one foreman, $2 81 per day; one foreman pattern shop, $3 per day; one foreman boiler makers, $3 per day; one foreman iron founders, $3 per day; one foreman copper-rolling mill, $3 per day; one assistant engineer, $2 25 per day; one assistant engineer, $2 per day.

The chief naval engineer is to have charge of all the engines and machines in the yard worked by steam, to keep them in good order, and repair and see that proper men, and no more than are necessary, are employed. He is to superintend the manufacture of all articles in the above departments, the construction and fitting of steam engines, and all matters coming within the duties of an engineer. Upon the commandant's approval he will answer all requisitions in the several departments, and render to each accurate accounts of costs, &c. The number of firemen, &c., to be regulated by circumstances.

CIVIL ENGINEER'S DEPARTMENT.

One civil engineer; one clerk, $2 per day; one inspector, $2 per day; one messenger, $1 25 per day; one foreman of masons, $3 12 per day.

One quarterman of masons to every thirty men, and such additional quartermen as the civil engineer, with the commandant's sanction, may deem necessary.

The quartermen to receive 25 per cent. addition on first class journeyman's pay, provided it does not exceed 50 cents per day.

Clerk of the yard, $1,200 per annum; one check clerk, $2 per day; one writer, $2 per day.

STOREKEEPER'S DEPARTMENT.

One chief clerk, $1,200 per annum; one second clerk, $900 per annum; one writer, $2 per day; one receiver, $1,75 per day; one receiver, $1,25 per day.

TEAMSTERS.

One head teamster, to receive pay on Sundays, $2 per day.

POLICE.

One captain, $1 75 per day; twelve watchmen, $1 50 per day.

In the foregoing list the ordinary men and persons belonging to the dispensary are not included; nor are mechanics, laborers, teamsters, &c., as many of whom shall be employed at the usual rates as the commandant may deem necessary.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 35.

ARMY REGISTER.

LETTER

FROM

THE SECRETARY OF WAR,

TRANSMITTING

A transcript of the Army Register for 1859.

MARCH 2, 1860.—Laid upon the table, and ordered to be printed.

WAR DEPARTMENT, *February* 28, 1860.

SIR: In compliance with a resolution of the House of Representatives of June 14, 1848, I have the honor to transmit herewith a transcript of the official Army Register for the year ending June 30, 1859, showing the annual pay of each officer of the army, the amount paid him for rations, servants, and forage, and the gross amount paid or allowed him, in all respects, for and on his account, for and during the preceding fiscal year, from the appropriations for the support of the army.

Very respectfully, your obedient servant,

JOHN B. FLOYD,
Secretary of War.

Hon. WM. PENNINGTON,
Speaker of the House of Representatives.

Transcript of the official Army Register for the year 1859, *exhibiting the annual him for rations, servants, and forage, and the gross amount paid or allowed him,*

Name, rank, and date of commission.	Brevets or commissions of prior date.	No. of months for which pay accounts are received.	Pay.	Rations.	Allowance for servants.	Forage.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 36.

ART COMMISSION.

LETTER

FROM

THE SECRETARY OF THE INTERIOR,

IN ANSWER TO

A resolution of the House calling for the report of the Art Commissioners, &c.

MARCH 5, 1860.—Laid on the table, and ordered to be printed.

DEPARTMENT OF THE INTERIOR,
Washington, March 3, 1860.

SIR: I have the honor to acknowledge the receipt of a resolution of the House of Representatives, communicated to me by the Clerk thereof, in the words following, to wit:

"*Resolved*, That the Secretary of the Interior be requested to furnish to the House of Representatives the report of the Art Commissioners, and the accompanying documents, made to the President of the United States."

In reply, you are respectfully informed that the papers referred to are in the possession of the War Department, to the Secretary whereof I have transmitted the resolution of the House of Representatives for answer.

I have the honor to be your obedient servant,

J. THOMPSON,
Secretary.

Hon. WM. PENNINGTON,
Speaker of the House of Representatives.

which have been made by the Department of the Interior in reference to the right of the New York Indians to said lands."

In regard to the information called for by this resolution, I would respectfully suggest that the subject as presented in a report from this office of the 7th of March, 1859, which was approved by you, will indicate the action then contemplated by the department in connexion with the New York Indian reserve in Kansas Territory, and I herewith enclose a copy of the same marked "A," together with a copy of your reply, marked "B," from an examination of which it will be perceived that in consideration of the fact of Congress having failed to take any definite legislative action in the premises, it was deemed proper to execute the existing stipulations of the treaties of 1838 and 1842, by a careful investigation of which it was found that sufficient authority was given to justify the survey of the lands, and the taking of a census in order to ascertain who were entitled to participate in the allotments of the tract in question. Accordingly with your approbation the eastern portion of the reserve, embracing about seventy-two townships, has been surveyed under the direction of the General Land Office, and a special agent (Alden S. Stevens, Esq.,) was appointed to take a census of the New York Indians residing in Kansas, and his report upon the subject is now undergoing an examination here with a view to ascertain the exact number of New York Indians who are entitled to participate in the beneficial provisions of the aforesaid treaties. When this has been done, it is contemplated to cause 320 acres of land to be assigned to each Indian so entitled, and the list of allotments when prepared will be submitted for your approval, before the surplus lands will be turned over to the jurisdiction of the General Land Office, as a part of the public domain.

In connexion with the particular points of inquiry suggested by the resolution of the House of Representatives, I would briefly but respectfully state, by way of recapitulation, in regard to the present condition of the reservation, that only seventy-two townships of land in the eastern part of the reserve have been surveyed, the approved plats of which are now on file in the General Land Office, and from the most reliable information I have been able to procure, there are but a few families of New York Indians residing upon the lands, as the greater portion of those who had been in possession of the same for many years were forcibly driven from their homes by the white citizens, who now occupy a considerable portion of the reservation. The aggregate number of white settlers thereon may be safely computed at 2,000 persons, probably a greater number, who claim by pre-emption the tracts they have improved.

A part of the reservation has been surveyed as aforesaid, but none of the land has yet been brought into market as a part of the public domain.

In this connexion I would respectfully refer to vol. 5, Senate Ex. Doc., No. 13, 3d session, 34th Congress, for information of an anterior date to the report herein referred to bearing upon the subject of the rights of the Indians under the aforesaid treaties.

I also transmit herewith a copy of a report from this bureau to you of the 8th of April, 1858, marked "C," together with a copy of

your communication of the 19th of the same month, addressed to me as the then chairman of the Committee on Indian Affairs in the House of Representatives, marked "D," which latter communication contains the views of the department respecting the rights of the New York Indians to lands in Kansas, which are regarded as pertinent to this subject.

Very respectfully, your obedient servant,

A. B. GREENWOOD,
Commissioner.

Hon. J. THOMPSON,
Secretary of the Interior.

A.

DEPARTMENT OF THE INTERIOR,
Office Indian Affairs, March 7, 1859.

SIR: In consequence of the termination of the session of Congress without any definite action having been taken by the Senate upon the bill which originated in the House of Representatives, relative to the assignment or allotment of lands to certain New York Indians, who have removed to Kansas under existing treaty stipulations, I deem it my duty, in view of the embarrassing circumstances which surround the Indians and the white settlers who are living on the reserve, by reason of the fact that the government surveys have not been extended over said tract of country, to respectfully solicit your attention to the consideration of the propriety of taking immediate action relative to the completion of the necessary surveys, (a portion of the tract having already been surveyed,) and the allotment of lands to the Indians entitled thereto, under the provisions of the second article of the treaty of 1838, and the second clause following the ninth article of the treaty of 1842, which, in the absence of more definite legislation, may, in my opinion, be regarded as conferring sufficient authority upon the department to warrant the survey of the reservation in Kansas, the assignment of three hundred and twenty acres of land to each Indian entitled to the same, and the opening up of the balance of the country to settlement and pre-emption.

Under the second article of the treaty of 1838 (see Statutes at Large, volume 7, page 551) it was provided that within the reservation therein described there would be three hundred and twenty acres of land for each soul of said Indians, as their numbers were then computed; to have and to hold the same in fee simple to the said tribes or nations of Indians, by patent from the President of the United States, issued in conformity with the provisions of the third section of the act, entitled "an act to provide for an exchange of lands with the Indians residing in any of the States or Territories, and for their removal west of the Mississippi," approved on the 28th day of May, 1830.

The third section of said act of Congress is in the following language, viz: "That, in making of any such exchange or exchanges, it shall

and may be lawful for the President solemnly to assure the tribe or nation with which the exchange is made, that the United States will forever secure and guarantee to them, and their heirs or successors, the country so exchanged with them; and if they prefer it, that the United States will cause a patent or grant to be made and executed to them for the same; provided always, that such lands shall revert to the United States if the Indians become extinct or abandon the same." (Statutes at Large, volume 4, page 412.)

By the second clause following the ninth article of the subsequent treaty of 1842 made with the Seneca Indians, it was provided that "the United States further consent and agree that any number of said nation who shall remove from the State of New York under the provisions of the above-mentioned treaty, proclaimed as aforesaid on the 4th day of April, 1840, shall be entitled, in proportion to their relative numbers, to all the benefits of said treaty."

This stipulation of said treaty so far changes the provisions of the former treaty of 1838 as to confer the benefits of the same upon the Senecas, as individuals, in contradistinction to their tribal capacity, under stipulations of an anterior date; consequently the subsequent treaty of 1842 confers upon the Seneca Indians who have removed to Kansas the right to select three hundred and twenty acres of land each, within the reservation, according to their relative numbers; and I conceive that an equitable construction of the treaty of 1838 would concede the same rights to the individual members of the other tribes specified, who have emigrated to Kansas in good faith, under the impression that they were entitled to participate in the division of the lands as individuals, and not as a tribe.

If you concur in the opinion herein expressed, I propose to cause a census to be taken of the Indians contemplated by the beneficial provisions of said treaties, and who removed to Kansas; and when the surveys are completed, to assign to each soul three hundred and twenty acres of land in severalty.

The destitute condition of many of the Indians who have been driven from their homes by the white settlers, and are dependent upon the charity of their friends of other tribes for a scanty subsistence, taken in connexion with the unsettled state of society in that portion of Kansas embracing the New York reserve, which is attributable to some extent to the fact that the lands have not yet been brought into market, induces me to respectfully suggest that the adoption of the course of action herein indicated would greatly tend to settle existing difficulties, and turn the attention of the unemployed and floating population from robbery and plunder to the cultivation of the soil and habits of industry, which exert an influence in favor of morality and virtue as certainly as idleness begets vice.

Under this view of the subject, I have the honor to request that you will give me such instructions in the premises as in your judgment may be deemed proper in consideration of existing circumstances.

Very respectfully, your obedient servant,

J. W. DENVER,
Commissioner.

Hon. J. THOMPSON,
Secretary of the Interior.

B.

DEPARTMENT OF THE INTERIOR, *March* 21, 1859.

SIR: In reply to office report of the 7th instant, in relation to the New York Indian reserve in Kansas Territory, I have to say that the views therein expressed meet my entire approbation.

You will therefore appoint an agent to take a census of all the Indians entitled to allotments of land in Kansas, under the provisions of the treaties of 1838 and 1842, with the New York Indians, and instruct him to enter upon his duties at once. You will instruct him to place upon the roll the names of such New York Indians only as have actually removed to Kansas and are now residing there.

Instructions will be sent to the Commissioner of the General Land Office to have the reserve surveyed at the earliest period practicable, so that when the census is completed and approved you will be enabled to make the allotments without delay.

Very respectfully, your obedient servant,

J. THOMPSON, *Secretary.*

Hon. CHARLES E. MIX,
Acting Commissioner Indian Affairs.

C.

DEPARTMENT OF THE INTERIOR,
Office Indian Affairs, April 8, 1858.

SIR: Referring to a communication from the Hon. A. B. Greenwood of the 11th untimo, enclosing two memorials from citizens of Kansas, one pertaining to lands provided for the Christian Indians, and the other respecting settlements made on lands set apart for the New York Indians by the second article of the treaty of the 15th of January, 1838; the former having been considered in letters from this office of the 31st ultimo and the 7th instant, I will now present the facts in connexion with the latter, together with an expression of my views in relation to the subject.

On the 26th of December, 1856, your predecessor, in answer to a resolution of the Senate calling for information on this subject, communicated to that body a report from the late Commissioner of Indian Affairs, being a "statement of the condition of the title of the United States to all that portion of the Territory of Kansas designated as being set apart and assigned to the New York Indians, and the nature of the authority by which said tract has been assigned." (See vol. 5 of Senate Ex. Doc's, No. 13, 3d Session, 34th Congress.)

It will be perceived that in view of the interests of the Indians and of the citizens of Kansas, further legislation upon the subject of that reservation was suggested in said report as necessary under the existing circumstances of the case; and it may be proper to remark that the rapid influx of settlers into Kansas, and especially upon the reserve, since the date of that report, makes legislative action at this time still more urgent and necessary than at any former period.

Under the conviction of this necessity, your attention was called to the subject in the last annual report of this office, with a view to the

assignment in severalty to such of the New York Indians as had removed upon the reservation the three hundred and twenty acres of land to which each Indian settler is entitled under the provisions of the treaty of 1838, and for the purpose of bringing the remainder of the 1,824,000 acres "into market, for the benefit of our citizens who are so rapidly filling up the Territory."

In February, 1857, the Senate Committee on Indian Affairs submitted an amendment to the Indian appropriation bill as it came from the House of Representatives, providing for the survey of the tract and the allotment in severalty, in accordance with the provisions of the treaty of 1838, to such of the New York Indians as had emigrated to and settled thereon, three hundred and twenty acres of land to each, and constituting the residue of the reserve a part of the public domain, subject to existing laws governing the sale and pre-emption of such lands.

The bill was also amended so as to authorize the President, in his discretion, to adjust, by convention or otherwise, any right or claim of said Indians to said country, and it appropriated the sum of $1,000 for this object. These amendments were adopted by the Senate, but the House refusing to concur, committees of conference were appointed by both Houses, and they failing to agree, the amendments were finally lost. It is understood, however, these propositions were not opposed in the House upon their merits, but by reason of the incongruity of introducing such provisions in the shape of amendments to the Indian appropriation bill.

If the amendment appropriating $1,000 for the purpose of negotiating a treaty with the Indians had passed both houses of Congress, it would have been an insufficient sum to accomplish that object, and I would now respectfully recommend, in the event of your concurrence in the views herein expressed, that Congress be asked to take such legislative action as may be deemed requisite to authorize the negotiation of articles of convention and agreement with the aforesaid Indians, having a due regard to the rights and interests of those who have never emigrated to the reserve, as well as to that portion of the tribe who now reside thereon, or have been driven from the lands in question, and in consideration of the fact that the Indians are dispersed through several of the States and Territories of the United States, and the great distance which must necessarily be travelled by the commissioners who may be appointed to negotiate with them, I would suggest the appropriation of a sum not exceeding $5,000 as necessary to cover all the expenses incident to the consummation of the object contemplated.

Very respectfully, your obedient servant,

CHARLES E. MIX,
Acting Commissioner.

Hon. J. THOMPSON,
Secretary of the Interior.

D.

DEPARTMENT OF THE INTERIOR,
April 19, 1858.

SIR: I have the honor herewith to transmit a copy of a report addressed to this department on the 8th instant by the acting Commissioner of Indian Affairs, in relation to the memorial of certain citizens of Kansas, praying that the tract of land in that Territory known as the "New York Indian reserve" be opened for settlement, which was referred by you to this department with a request for the expression of its views.

Referring you to this report, and to a previous one on the same subject by the late Commissioner, (see vol. 5, Sen. Ex. Doc. No. 13, 3d sess. 34th Cong.,) for the views of the Indian office, I would suggest the propriety of providing by law, first, that the land be surveyed; second, that a patent for 320 acres of land be issued to each of the New York Indians who have removed to the reservation, in pursuance of the provisions of the treaties of 1838 and 1842; the selections to be made under the direction of the Commissioner of Indian Affairs, and to include any improvements made by the reservee; and, third, that the remainder of the land be declared a part of the public domain, and subject, as soon as the surveys have been approved, to existing laws governing the sale and pre-emption of the public lands.

The Indians who have failed to remove have, by the express terms of the treaty of 1838, forfeited their title to the reserve; and a due regard for the interests of the white population of Kansas would seem to require that this large and valuable body of land should no longer be withheld from settlement.

The memorial is herewith returned.

Very respectfully, your obedient servant,

J. THOMPSON, *Secretary.*

Hon. A. B. GREENWOOD,
Chairman of the Committee of Indian Affairs.

TH CONGRESS, } HOUSE OF REPRESENTATIVES. { Ex. Doc.
st Session. } { No. 38.

NAVY AND MARINE CORPS—PAY OF, ETC.

LETTER

OF

THE SECRETARY OF THE NAVY,

TRANSMITTING

statement of the pay and allowances to the officers of the navy and marine corps for the year 1859.

MARCH 6, 1860.—Laid on the table, and ordered to be printed.

NAVY DEPARTMENT, *March* 5, 1860.

SIR: In compliance with a resolution of the House of Representves of June 14, 1848, I have the honor to transmit herewith a copy a communication from the Fourth Auditor of the Treasury, accomnied by a statement prepared in his office of the pay and allowances eived by the officers of the navy and marine corps during the fiscal ar ending June 30, 1859.

I am, very respectfully, your obedient servant,

ISAAC TOUCEY.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

TREASURY DEPARTMENT,
Fourth Auditor's Office, February 29, 1860.

SIR: I have the honor to transmit the statement required by a resoion of the House of Representatives, passed during the first session the 30th Congress, which directs that the Secretaries of the Navy d War Departments furnish that House annually with "a transcript the official army and navy lists in such form as to affix opposite the me of each person contained therein, in separate columns, the annual y of such officer or person, the amount paid him for rations, serits, and forage, and the gross amount paid or allowed him in all

respects for and on his account for and during the preceding f year."

The blanks which appear are generally occasioned by the wa returns from pursers of distant vessels and are not of much import since the amount received by officers on board of such vessels us consists only of the sea-pay belonging to their rank, and a comm tion of their rations.

I am, sir, very respectfully, your obedient servant,

A. J. O'BANNON,
Fourth Audit

Hon. ISAAC TOUCEY,
Secretary of the Navy.

CONGRESS, } HOUSE OF REPRESENTATIVES. { Ex. Doc.
Session. } { No. 40.

FINES AND DEDUCTIONS—MAIL CONTRACTORS.

LETTER

FROM

THE POSTMASTER GENERAL,

TRANSMITTING

eport of the fines imposed upon and deductions from the pay of mail contractors, &c.

MARCH 8, 1860.—Laid upon the table, and ordered to be printed.

POST OFFICE DEPARTMENT, *March* 7, 1860.

R: The act of Congress approved July 2, 1836, section 22, requires e Postmaster General to make to Congress, at each annual session eof, a report of all fines imposed and deductions from the pay of ractors, made during the preceding year, for failures to deliver the or for any other cause, stating the names of the delinquent con- ors, the nature of the delinquency, the route on which it occurred, ime when the fine was imposed, and whether the fine has been tted, or order for deduction rescinded, and for what reason."

compliance with the requisition quoted above, I have the honor ansmit to you herewith, for the use of Congress, the accompanying rt.

ith great respect, I have the honor to be, your obedient servant,

J. HOLT,
Postmaster General.

ON. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

Fines imposed on contractors and deductions made from their pay—Continued.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 42.

WAGON ROAD—FORT SMITH TO COLORADO RIVER.

LETTER

OF

THE SECRETARY OF WAR,

TRANSMITTING

The report of Mr. Beale relating to the construction of a wagon road from Fort Smith to the Colorado river.

MARCH 9, 1860.—Laid upon the table and ordered to be printed.

WAR DEPARTMENT, *March* 8, 1860.

SIR: In compliance with the resolution of the House of Representatives of the 15th ultimo, requesting the Secretary of War "to communicate to the House of Representatives the report of Edward F. Beale, esq., relating to the construction of a wagon road from Fort Smith, Arkansas, to the Colorado river," I have the honor to transmit herewith a copy of the paper referred to.

Very respectfully, your obedient servant,

JOHN B. FLOYD,
Secretary of War.

Hon. WM. PENNINGTON,
Speaker of the House of Representatives.

CHESTER, PA., *December* 15, 1859.

SIR: I have the honor to transmit herewith the report of my last expedition, from which I have lately returned. This expedition, commencing, as it did, in the fall of 1858, and being prosecuted on the open plains of the 35th parallel of latitude during the entire winter of 1858 and 1859, affords a striking and gratifying proof of what I have stated heretofore of the route on which I have been employed, that winter offers no obstacle on that parellel to the passage of men and wagons, or travel of any description. During the entire winter my

men were exposed night and day to the open atmosphere, some of the messes not using for the whole journey their tents, and others but very rarely. The winter was said to have been one of uncommon severity, yet, although my men were exposed on their guards at night, and in their duties with pick-axe and shovel in cutting down the embankments of creeks, and with the axe and saw in making bridges, during the day, and to the continual discomfort of a daily march, not one of them had occasion to complain of the slightest sickness during the journey. The country over which we passed was one of the most attractive description. As I have stated to you in a previous letter, a wide and level river bottom is offered as a general line of travel all the way from the last settlements of Arkansas to the first settlements of New Mexico, and, although I did not follow this line exclusively, but frequently deviated from it to take the divide, I do not remember a heavy pull between Little River in Arkansas and the settlements of New Mexico. Nature has supplied the country over which we passed most bountifully with the three great requisites for an overland road, wood, grass, and water. Although I remained in New Mexico for nearly two months, it was not time lost, as I employed myself and a portion of my men in an exploration to the eastward along the line of the Conchas river, which afforded the most gratifying results. On the termination of this exploration, I broke up my temporary camp in February and pursued my journey to the westward.

The broken nature of the country lying immediately west of Fort Smith, Arkansas, occasioned by the approach of the spurs of the mountain ranges, which run for a distance of nearly one hundred and fifty miles beyond the boundary line of the Indian territory to the Arkansas and Canada rivers, renders the construction of a railroad elsewhere than along the valleys of the streams a work of no little difficulty and cost. From Fort Smith two routes have now been reconnoitered; one passing along the head waters of Poteau creek, San Bois, and the south fork of the Canadian, and then crossing to the waters of Boggy river, whence the line descends to the Canadian valley near the site of old Fort Arbuckle; the other traversing the country immediately south of the rivers, but not touching the valleys, and crossing the numerous spurs and several elevated ridges east of the passage of the Canadian at North Fork Town, beyond which the surface east of Little River is even more broken than the more eastern portion of the route. Along either of these lines the maximum grade could not, except at an immense cost, be reduced below fifty feet to the mile, and the tortuous character which would of necessity attach to a line located upon either route would so increase its length that, without considering the increase of distance due to a proper allowance for ascents and descents, it is questionable if upon the score of distance alone it would not be advisable to make the location along the valleys. The general course of the Canadian is remarkably direct between its mouth and the 104th meridian, it never runs further north than the 35th parrellel and but once passes below it, and in that instance flows for a distance of about sixty miles parallel to it, and only a few miles below it. A line located along the valley of this stream, from its mouth to the point at which it would leave it near the 104th meridian,

would not exceed six hundred and thirty-five miles in length. There are but few points along the river where any considerable work would be required. East of North Fork Town some few bluffs would offer unimportant obstacles, but west of that point a magnificent valley offers every facility for the construction of a first class road, with very low grades and easy curvature.

The advantages which attach to a route which offers a continuous river valley for so long a distance for its location cannot be too strongly urged; there is every reason to believe that from Fort Smith to the main divide, between the waters of the Canadian and those of the Rio de Las Gallinas, an unbroken ascending grade can be had that will at no point exceed twenty-five feet per mile; the entire ascent from Fort Smith to this point would be fifty-two hundred and sixty-five feet, and as there would be no descents whatever the equated distance would only amount to seven hundred and eighty-five miles of level road. From the divide just mentioned to the Rio Grande at San Felipe the distance would be about ninety-five miles, over a country which would compel the adoption of grades of 52.8 feet per mile, though careful examination might reduce them. Upon this division all the heavy work would occur, comprising the bridging of the Gallinas, the Pecos, and Rio Grande, and tunnelling the summits between these streams; the equated distance from the Canadian summit to the Rio Grande would be one hundred and forty-five miles, making the entire distance (equated) from Fort Smith to San Felipe nine hundred and thirty miles. The road from Fort Smith to San Felipe may be properly divided into three sections: the first extending from Fort Smith to the eastern boundary of Texas; the second to the mouth of the Rio de las Conches near the 104th meridian; the third thence to the Rio Grande. The valley of the Arkansas is similar to that of western streams generally, the highlands alternately receding from and approaching the river—the bottom lands sometimes stretching out for miles—sometimes disappearing and giving place to bluffs; except where it is necessary to cut through these bluffs the work will be very light, the smooth level character of the bottom land offering every facility for easy construction. East of the old trading post known as Choteau's, the valley of the Canadian is very like that of the Arkansas, the bluffs, however, occur less frequently and the liability to overflow seems to be lessened. Going west the tributaries to the main streams diminish in number and size, and if a line be located upon the south bank of the river there would be but two bridges of any size needed. West of Choteau's the valley of the Canadian is very wide, rising very gently and with an almost inappreciable slope from the stream toward the high land; the river itself is small and never apparently leaves its banks; long straight stretches are of frequent occurrence; tangents of from ten to thirty miles in length can be easily laid along the valley; the soil is a light sandy loam that can be easily handled and will form a firm compact road bed; the dryness of the climate will expose embankments to but little loss from washing; the fertility of the soil throughout this region is well attested by the luxuriant vegetation that characterizes the entire valley of the Canadian; wild grape-vines grow in the greatest profusion, not only in the bottoms, but on the

first plateau; there is but little doubt of the perfect adaptability of this country to the production of wine; the high lands that bound the river are covered at all seasons with a dense growth of nutritious grasses that will serve for the pasturage of countless herds; the country throughout this section is well wooded for the most part; as far as Choteau's oak, hickory, cedar, &c., of large size abound; beyond, black oak, hackberry and cotton-wood are found, in sufficient quantities to serve for railroad purposes and the wants of settlers, besides, the Washita valley and those of its tributaries will furnish a large amount of similar wood, with a mean transportation not exceeding twenty miles; the Canadian supplies a large quantity of water fit for all purposes, while nearly every little arroyo that approaches it from the hills on either side is well furnished with ever-flowing springs. The second division of the road follows the valley of the Canadian exclusively to the mouth of the Conchas—the character of the country is similar to that near the Antelope Hills; about the 104th meridian the valley narrows, but soon opens again, and for fifty miles east of the Conchas offers to the eye a magnificent expanse of bottom land that cannot fail to please both agriculturist and engineer. A good supply of timber is found along this division, water is abundant, and the character of the work is precisely similar to that of the western portion of the first section. At the Angosturas, a short distance east of the mouth of the Conchas, there is an admirable site for a bridge across the Canadian, should the north side of the river be chosen for the road. About this point the Canadian is a clear, free-flowing stream, passing over a beautiful gravel bed, and running between banks of from ten to twenty feet in height; large groves of cotton-wood and hackberry occur at frequent intervals. Up the valley of the Conches, a tributary of the Canadian, there will be no trouble in finding a favorable line. The valley is large, free from ridges, rising very regularly, and smooth in its surface; the approach to the divide between it and the Gallinas is very gentle, not requiring a grade of more than twenty-five feet. At the summit a short tunnel will be needed. The site, however, is most favorable, and the material a soft sandstone, easily pierced. The descent to the Gallinas will be regular and easy, at the rate of thirty feet per mile; a bridge can be easily thrown across this stream with a span of one hundred feet; the approaches on either side will need but little embankment.

Beyond the Gallinas the country is rolling, and it will be necessary to form a summit near the Chupainas; the grades approaching it will not exceed forty feet per mile; the work around will be comparatively light; it is doubtful whether there would be any rock excavation. An admirable site for a bridge across the Pecos can be found near the mouth of the cañon about five miles above Anton Chico. At this point machine shops, &c., could be advantageously established, as there is an abundance of coal and timber in the immediate vicinity, and a large water-power might be commanded; good building stone abounds, nor is it deficient at the Gallinas. By crossing the Pecos at this point, rather than at or below Anton Chico, the ascent to the high land in approaching the cañon Blanco is materially lessened. To the cañon the route would traverse a somewhat broken country, ren-

dering grades of about forty feet per mile necessary. At the summit, between the cañon and Gallisteo creek, a short tunnel through an easily excavated material would be needed, and a small amount of moderately heavy work would occur in passing to the Rio Grande. As far as the Lagunas timber is found in abundance, and in descending the valley of Gallisteo creek, mottes of cedar and piñon are frequent, while the mountains in the immediate vicinity possess large forests, which will furnish an endless amount of fuel. Throughout this division of the road there will be no difficulty in procuring the necessary timber for the purpose of construction. Pine, hemlock, and other forest trees of large size abound in the Santa Fé mountain, and along the headwaters of the Pecos and other streams. The construction of a bridge at San Felipe, while a work of no small magnitude, will offer no serious obstacle; three spans of two hundred feet each will be necessary. The bed of the stream is of solid rock, affording the best of foundations for the abutments and piers. Good building stone can be obtained in the immediate vicinity. While a mere reconnoissance does not afford sufficient data for an elaborate and exact estimate of cost, an approximation may be made from notes taken along the route that will not vary much from the amount to be expended in the actual construction of the road—an estimate which it is thought will fully cover all expenditure is appended. It is based upon such knowledge of the country as can be had without the actual use of transit and level instruments. It is true that the sinuosities of the Canadian river might, by those disposed to find fault, be urged against the route, but, when we consider the width of its valley, its gentle rise, the abundant supply of wood and water, the very small cost of construction, and the capabilities of the country for supporting a large population, these form, it must be acknowledged, advantages that are not found to belong, in an equal degree, to any other projected route across the continent. Beyond the Antelope Hills even this objection cannot obtain, for the course of the Canadian is remarkably straight from the one hundred and fourth meridian to that point, and if this portion of the line could be connected with the frontier of either Missouri or Arkansas without too great an increase of cost, the thirty-fifth parallel route would be unrivalled in its claim to consideration. The north fork of the Canadian would probably afford a more direct location than the main stream, and the summit between it and the latter could be crossed without the adoption of objectionable grades. Whether the valley, however, would prove as favorable in other respects is questionable. Such a line would be worthy of a careful examination and comparison with the other. Another route from the southwestern portion of Missouri to the Antelope Hills is worthy of consideration. The country west of the Missouri frontier comprises a series of gently rolling prairies, well wooded and watered, of excellent soil, and not so broken as to offer any serious impediment to the building of a good road with easy grade. No difficult streams would require bridging, and the summits between the water courses could be easily crossed. A railroad connecting the town of Neosha with St. Louis is projected, and will, no doubt, be in a short time constructed. This is a fact of no little consequence in this connexion, and unless the enterprise of

the citizens of Arkansas arouses them to a sense of their position, and efforts are made to connect the flourishing little city of Fort Smith by rail with the east, she may forfeit by the neglect of her people the advantages nature has bestowed upon her. The respective merits, however, of these proposed lines can only be decided by a critical and careful examination by the civil engineer; the level and transit instruments solve difficulties and establish facts in a few days that would defy simple barometric and compass reconnoissances for years. A twelvemonth of careful survey would furnish reliable and accurate estimate for the entire route from the frontiers of the States to California, and in that time an examination could be made of all the branch lines that the expediency of reducing the distances and grades to the lowest limits might suggest. I have already described to you the country lying between the Del Norte and the Colorado river, nevertheless a recapitulation may not be thought unnecessary. Leaving Albuquerque, the first fifty miles is over a country of sandy soil, not very well supplied with timber, but possessing in parts a fair amount of grass; thence to Zuñi grass, wood, and water are found in sufficient quantities. The timber is pine, of the largest proportions, existing in noble forests. Intermediate in this distance, by an exploration to the northward, I made important discoveries of mineral, (copper ore,) and a country of uncommon beauty. This region I have described in my journal, which accompanies this letter, as far as the village of Zuñi, and at it, a distance of one hundred and fifty miles to the westward of Albuquerque. Corn forage may be obtained at short intervals on the road. From Zuñi to the Little Colorado river the country is rolling, and well supplied with wood, water, and grass, and is of a good surface for the whole distance, excepting the wide sandy beds of several creeks, which are at times several feet deep, and at others dry. Arrived on the banks of the Little Colorado, there is before the traveller a wide river bottom, and abundant grass and timber, to the base of the San Francisco mountain. At this point the road ascends to its greatest elevation, through pine forests and magnificent valleys, and by an ascent so gradual that there is but little appearance of it to the eye. From the San Francisco mountain to Floyd's Peak the country is very much of the same character as that between Zuñi and the Little Colorado river, being high and rolling, but not hilly. It is nearly equally divided between open plains, covered with nutritious grasses, and dense forests of pine, piñon, and cedar. Between Floyd's Peak and the Colorado river timber becomes scarcer, although there is still a great abundance until within forty miles of the river, when the country assumes a barren and sterile appearance. Among the important discoveries made during this exploration was the existence of the finest quality and abundant quantity of timber in a mountain, which I called on my first expedition "Harry Edwards' mountain," and which is not over forty-five or fifty miles from "Beale's crossing" of the Colorado river. I cannot conclude this letter without urgently calling your attention to the imperative necessity of building a bridge across the Rio del Norte, at or near Albuquerque. This is a military, civil, and emigrant necessity. In support of this assertion I have the honor to enclose you the replies of distinguished officers of the army,

serving in New Mexico, and thoroughly acquainted with the subject, to the committee of a public meeting held in Albuquerque for the purpose of considering this matter. They are marked as follows: A, B, C, and D. I also desire to call your attention to the itinerary which accompanies this letter. It is in itself an abbreviated history or description of the country from Arkansas to California, by which an emigrant may pursue the route of the thirty-fifth parallel with a perfect knowledge from hour to hour of the character of the country in advance of him, its resources, climate, productions, Indians, and game. I also append to my own journal that of a young gentleman, one of my assistants, of ability, Frederic Engle, esq., of our journey returning from the Colorado river. Not having yet received a report of the condition of the work on the bridges now being constructed in Arkansas, I cannot, as I would desire, give you further information concerning them than what I have heard by a gentleman lately returned over that portion of the road. He describes them as being of the most substantial and durable character, and I hope in a few days to corroborate this intelligence by forwarding to you an official report from the officer in charge. *The road from Floyd's Peak to the Colorado is thoroughly completed, and ready for travel of any kind whatever.*

Without intending to draw invidious comparisons between the various routes from our western border to the Pacific ocean in favor of that by the 35th parallel, I think I can, with safety, say that none other offers the same facilities for either wagon or railroad.

It is the shortest, the best timbered, the best grassed, the best watered, and certainly, in point of grade, better than any other line between the two oceans, with which I am acquainted.

For the first of these assertions an inspection of the map is quite sufficient proof; for the second, I rely upon the report of Lieutenant Whipple and my own observation, and especially my last explorations, which, by the discovery of fine pine timber in Harry Edwards' mountain, enable me to state that the 35th parallel road carries abundance of cedar and pine to within forty miles of the State line of California, within which, on the same parallel, there is abundance in the whole Sierra Nevada range of mountains. For the third proposition, I rely upon the concurrent testimony of all who have travelled the road and compared it with other trans-continental routes, who agree with me that it is habitable throughout. For the fourth assertion, I think there can be no better proof than the fact that water is at but one point, thirty miles distant; and for the last assertion, I rely upon the profile of the country, which has been prepared from the instrumental observations of my two explorations.

It is my firm belief that whatever influences may tend to divert travel from this road at present, the future will fully sustain the judgment of those who now advocate its claims.

With this report I also forward a letter from J. R. Crump, esq., who traversed the road from Albuquerque to Fort Smith in summer, after having accompanied me on the first journey over it in winter. The letter of this gentleman is entitled to every credit. He is a civil engineer of the highest professional attainments, and one whose judgment has been matured in the practice of the theories of his business.

I am indebted to him for valuable assistance on my expedition and in the preparation of my notes for the public service.

I have given my views in this letter of the facilities offered by the 35th parallel for a railroad as far as New Mexico. Accompanying this is an estimate also of the cost of that work. These may be considered by you of some value, and I am willing to give them to the public, in the hope that they may in some manner aid this great necessity of the age.

I have the honor to be your obedient servant,

E. F. BEALE,
Superintendent.

Hon. J. B. FLOYD,
Secretary of War, Washington, D. C.

Estimate of cost of railroad, with double track, from Fort Smith, Arkansas, to San Felipe, New Mexico.

FIRST DIVISION.

From Fort Smith to Antelope Hills, 377 miles; graduation, masonry, track, engineering expenses, and equipment,	$9,311,900

SECOND DIVISION.

From Antelope Hills to summit between Canadian and Gallinas, 308 miles; graduation, masonry, track, engineering expenses, and equipments	8,192,800

THIRD DIVISION.

From summit to Rio Grande at San Felipe, 95 miles; graduation, masonry, track, engineering expenses, and equipments	3,886,400
	21,391,100

October 28, 1858.—After some ten days' delay at Fort Smith in making our preparations, we started to-day and came with the wagons to Warren's. I passed the day with Mr. John B. Luce, whose information on all subjects relating to the 35th parallel is more extensive and thorough than any other with whom I am acquainted. From my conversation with this gentleman I gained much valuable information, besides some excellent maps, and the second volume of Greig's Commerce of the Prairies, the best book ever written on prairie life, and particularly valuable to me, as this gentleman was the first to explore the line over which our road, for the most part, passes.

About ten days ago I despatched Mr. George Beale to Fort Arbuckle to obtain the services of a guide, or three, if possible. He returned day before yesterday, bringing the disagreeable intelligence that

neither of the men for whom I had sent would consent to start out this season, on account of the hostilities existing between our people and the Comanches; Black Beaver and Jesse Chisholm, the one a Delaware and the other a half-breed Cherokee, both agreeing that the Comanches would burn off every blade of grass as we advanced, so that we would soon not have an animal left, and be obliged to return on foot, a prospect by no means agreeable. I shall, however, go on, and trust to luck for a guide, or go without one. After straightening out camp I shall go myself to Arbuckle, and see what I can do with the Black Beaver. The country is so well known that it is hardly worth while to say anything of it between our first camp and Fort Smith; only one stream is crossed which requires bridging, which is the Poteau. This stream is about a hundred yards wide, and is bold and rapid. Its mouth is at Fort Smith, emptying there into the Arkansas.

October 29.—We were up at five o'clock this morning, and travelled through a heavy rain all the morning. It has rained every day for the past ten, and apparently not done yet. We have passed through a pretty country to-day, being about equally divided between prairie and wood land. Our teams have worked perfectly, although new to each other. We passed to-day but one stream which will require bridging, and at which place we found considerable difficulty in crossing. Its name was the Yellow Bank. Towards evening the rain ceased, and at half-past ten we encamped on a fork of the Yellow Bank, having made fourteen miles. We find here a fine open prairie, skirted with heavy timber. One stony hill was crossed by us to-day, but not a very bad one.

October 30.—We were off this morning at six and a half o'clock. It rained on us all night, and as our blankets were taken up a pool of water filled the depression our weight had made in the soft soil where we lay. After travelling a few hours in the cold rain it cleared up partially, but soon became overcast again, and we encamped on a little rivulet now running smartly with the recent rains, but I presume never a stream except during rainy weather. Our road to-day has very much resembled that of yesterday, being equally divided with prairie and wood land, and the grass abundant, even in the timber. At the crossing of the San Bois river we found a delay of two hours necessary to make the banks passable for our wagons. We found it fordable at this time, not being much more than belly deep for horses; but there are evidences of its frequently being impassable. I shall therefore bridge it. It is about thirty-five yards from bank to bank, and the stream itself in its present low state probably twenty-five.

October 31.—A drenching rain fell on us all night, accompanied with terrific thunder and lightning, and a heavy gale. We got up from the mud this morning stiff with our night's unrest, and hitching up our teams, rode nine miles facing the wind and rain, which continues without intermission to the present time, giving the prospect of another wet and stormy night. The country as yesterday. At half-past ten o'clock we encamped near a small creek heavily fringed with timber, and a fine prairie on both sides. We were delayed a short

time in repairing the road, which, with the exception of the place spoken of, was very good.

November 1.—Rained on us again all night, and all to-day very cloudy, with a cold west wind blowing in our faces. We came fifteen miles and a half, and reached our present camp at ten o'clock, leaving our morning camp at eight o'clock and thirty-five minutes. The road has been excellent all day, in spite of the two weeks rain. Our time made over it with loaded wagons is sufficient proof of this. We passed over the Longtown creek this morning, and were delayed an hour in working the crossing. This stream will require bridging. The country traversed to-day the same as yesterday; very beautiful to the eye; prairies and wood land. We find abundance of small game, such as partridges and prairie chickens; but Delaware Dick finds little for his rifle, as the Indians living here have hunted out the larger game.

November 2.—Up at four, and off at daylight; the night and day have been clear and almost cold. After travelling some nine miles we came to the Winchester mountain, which we found steep and rocky. The road, following, I suppose, some old Indian trail, took us straight up the hill; a little engineering at this point and a few thousand dollars would make a capital road over the mountain, as the land lies beautifully, and all the necessary material is at hand. A few miles beyond we came to and crossed the Canadian river; here about one hundred and fifty yards wide from bank to bank. On the south side the bank is rocky, but the northern shore sandy. The river was high, and in consequence we ferried it, and swam our loose mules over. It would be difficult to bridge this stream, and as it is fordable for the most part of the year, and only raised now by recent rains, I consider it better to leave it unbridged for the present, and until the necessities of the road demand it. After crossing the Canadian we encamped at the town of North Fork, which we found an insignificant village. Here we found corn had advanced from its usual rates of two bits to a dollar a bushel; of course, there had been a short crop, a drought, an unusual demand—in fact, a thousand plausible reasons were given for this increased price—but the true one kept far out of sight, which was that a government train and its quartermaster's drafts were on the road. Quitting the town, which had nothing inviting in its appearance, we encamped about half a mile beyond it.

November 3.—I started this morning in advance in order to try and get corn at a cheaper rate than the agent of the government agent offered it to me, which was one dollar and a half a bushel. After a ride of thirty-five miles I came to Jim Graham's, an Indian, where I was well received, and who, not being a contractor, sold me corn at seventy-five cents a bushel. Being in such good hands, we spent the night with Jim very comfortably.

November 4.—Arrived at Little river. At this place I found a trading house belonging to Mr. Aird, and was received by him with kindness and hospitality. It gives me pleasure to say that we found in him an energetic assistant, eager and willing to promote our enterprise and forward it in every way. He readily sold us corn at a dol-

lar, being a third less than we were offered it by others, and in everything we purchased of him we found the prices a great reduction on those of North Fork.

November 5.—This morning, about noon, arrived Mr. Laws. I had sent this gentleman on the south side of the Canadian from Scullyville in order to settle the disputed question as to which is the shortest road, that by the south side, or the one we have followed; until a comparison is made of the readings of the viameters we shall not be able to decide. Little river, which we crossed at this place, will require bridging, and is a fine stream about two hundred yards from bank to bank. The bed is rocky; the water, excepting after a rain, clear and abounding in fish, some of such size that they straightend out our largest hooks. Catfish have been caught here weighing a hundred pounds.

November 6.—Our wagons arrived and encamped near us; we are now awaiting our escort.

November 7 —Compared distance by Mr. Laws' viameter and our own, and find his road three miles shorter; so much for that matter, which has been a bitter dispute between the north siders and south siders ever since I arrived at Fort Smith. Laying by waiting for the escort.

November 8.—Weather seems to have made up its mind to clear; a beautiful morning; still waiting for the escort.

November 10.—Leaving our hospitable friends at Mr. Aird's, we started this morning at nine o'clock, and after travelling seven miles over a very pretty country and a tolerable road, encamped by the side of Little river in a pretty open prairie, covered with fine grass and skirted with abundant timber of ash, elm, hackberry, and oak. I shall now travel slowly until the escort overtakes us. The weather bright, clear, and pleasant.

November 11.—Started by seven o'clock and travelled over an excellent road and through a beautiful country for fifteen miles, when we encamped in a fine prairie, skirted with oak, and having fine water in a small ravine. It has been a matter of remark with all our party—the amount of mast which this country produces. Everywhere in the timber we find the ground covered with hickory nuts and acorns, and in the bottoms a few pecan trees add to the variety of hog feed. The country to-day has been the same as that passed through for some days back, excepting that the prairies are getting broader and more frequent, the woodlands separating them being only narrow belts. Our road has been along a high ridge for the most of our day's journey, and has been over limestone, with occasionally gravel and a little sand.

November 12.—Started at seven o'clock and travelled until one, making a little over sixteen miles. The road excellent and following a divide or ridge all the way. Timber and grass and water abundant. At one we encamped at a pool of water which came from a spring at its head. The pool was large, probably thirty yards in length and half as many in width, with three feet of water in it, and fringed with trees and bushes. We have found to-day on our road an immense amount of fine gravel, mixed with sand. Of the sixteen

miles over which we have passed, at least half has been gravel ridge, covered with small oak. Of course, it is impossible to say how much water may be found in this road at dry seasons, but we have found it abundant in every hollow.

November 13.—We were up at four o'clock and off before sunrise. Shortly after leaving camp we came to the end of the belt of timber in which we had passed the night, and a beautiful stretch of rolling prairie lay before us dotted over in some places with trees, and in every little ravine running from the divide we were travelling upon we found a fringe of timber. Game begins to get more abundant as we approach the verge of the semi-civilized tribes through which we have been passing, and to-day Dick, the Delaware, brought in two fine deer. Wild turkeys and raccoons are also very abundant. Our road to-day has been excellent, and by two and a half o'clock, including a delay on the road of half an hour, we had made seventeen miles, when we encamped in good grass near a small stream. At this camp I notice for the first time on this road the gramma grass of New Mexico, mixed with a good deal of the buffalo grass of the plains, from which it differs but little. Of gramma grass there are many varieties, and all most excellent. That alluded to at present is called "Gramma de Chino," or Curly Gramma, by the New Mexicans. This evening, near our camp, I found R. Frank Green, esq., with his mail stages, awaiting my arrival, and intending to take advantage of my escort to pursue their way to New Mexico. Mr. Green has been waiting nearly a month, the late fight of Major Van Dorn, (United States army,) and the hostilities consequent thereon making it impossible for him to pass the Comanche nation unprotected. This is a most unfortunate matter, as he had prepared himself at great expense and trouble to carry out a contract which he had entered into with the Postmaster General to carry the mail from Neosho, Missouri, to Santa Fé, New Mexico. Of course, under the circumstances, the government will see that he suffers no loss by reason of its inability to control the Indians with whom we have treaties. Nevertheless, under any circumstances, it frustrates for the time this enterprise, for which the preparation has been expensive, and which has been made with the greatest promptness and energy.

November 14.—Leaving our camp at half past six o'clock, we travelled slowly along, marking our way by cutting down such trees as obstructed the passage of the wagons and blazing others. The country, to-day, has been equally as beautiful as that of yesterday ; but the soil reminded me more of that of California, a rich black loam mixed with sand. We crossed several very pretty brooks of clear running water, which made me regret that I was not thirsty. The banks of these pleasant streams were all steep, so that we were delayed in cutting them down in order to cross. I noticed that the banks of all of them were of red clay, which, in Virginia, is said to denote limestone. At one o'clock we reached Choteau's creek and found it a fine clear stream, running through a bottom filled with pecan trees, hackberry, and cotton-wood, and the finest pasturage we have had since we left Fort Smith. The bottom is covered with wild rye, fresh green grass, and pea-vines, on which our mules soon filled themselves to repletion,

and the majority soon lay down, unable to feed longer. The bottom, at this place, is of vast extent, and the common bottom grass covers it waist high. Although detained over two hours, we have made, to-day, from half past six to one o'clock, ten miles and a quarter.

November 15.—We lay by to-day again waiting for our escort. This morning, getting up before day, Mr. Baker and myself took our guns and strolled into the woods, where we soon secured two wild turkeys each, besides wounding one which escaped us. The bottom abounds in fine food and shelter for them. We have employed most of the day in cutting a road through the timber, and cutting down the banks of the creek, to make it passable for wagons. I also sent a party out to the Canadian, which flows close to us, to cut out a crossing for that river. At this point I have determined to send back my first assistant, H. B. Edwards, esquire, in order to superintend the construction of bridges over the streams we have crossed, the sites having been already selected by myself. I part with this gentleman with great reluctance, having much need of his services, and relying greatly on his calm and deliberate temper and judgment for assistance in all cases of difficulty, especially I shall miss him when it becomes necessary for any reason that I should be absent from camp, which is frequently the case. I rode yesterdry with Mr. Green up this stream for about three miles, and discovered on a small tributary of it the remains of old Choteau's trading post; looking among the ruins, I found a human skull, which I tied behind my saddle and brought to camp. From the old fort we extended our ride to the Canadian, and crossing it ascended the opposite bank looking for a good crossing. I found the river a broad sandy bottom, but the actual stream of water was not more than fifteen yards in width. The crossing was excellent, and the bed so broad (over half a mile) that bridging here would be entirely unnecessary. The grass had been burned off a day before, but we found a good camp to which we shall move our camp to-morrow. There is abundance of timber of cotton-wood, pecan, walnut, hackberry, ash, and hickory on both the Canadian and this stream.

November 16.—We were up this morning at four and off at seven o'clock. Following the route I had chosen, we crossed Choteau's creek where we had cut down the banks at our camp, and crossed the Canadian. The slush ice was running down the river, and the edges of it encrusted with ice as thick as a dollar. To cross the Canadian we followed up the bottom, about two miles and a half, and forded the river, which was knee deep only, and the bottom was of fine hard sand. After crossing we encamped on the edge of the bottom, where the hills commence, and found it like Choteau's creek, filled with fine grass and pea-vine; walnut, pecan, ash, and hickory were all abundant. Wild geese, duck, and game of all kinds were plenty. Above our camp was a lake close to the bluffs, with high grass, in which we found geese plenty and a variety of ducks. We moved to-day only three miles, as we are still awaiting our escort, which must now be near. Mr. Edwards left us to day.

November 17.—Up at four and off at half-past six o'clock. Leaving the Canadian, we ascend gradually to the divide by a road we had previously cut out. The divide reached, we found the ground firm

and hard, and the travelling excellent. The grass on the divide was entirely burned off, leaving it so bare and so desolate in appearance as is possible to conceive. We followed the divide until near noon, our road, consequently, was not a straight one, but the travelling excellent. Many hollows head up towards the top of the divide, the waters drained by them running south into Walnut creek, a tributary of the Canadian. The hollows are all well timbered, but water is seldom found in them. About noon, having no particular reason for hurry, and being desirous of seeing Walnut creek, I turned from our course some three or four miles, intending to encamp on it for the night, and to go back on to the Canadian in the morning. On this account the distance travelled should not be taken into account, in summing up the whole distance to Albuquerque. We are now only moving camp daily a short distance, and waiting for the escort to come up. I found the Walnut creek bottom of great fertility, bearing abundant grass, and plentifully timbered with the same wood as growing at Choteau's, on the Canadian. The appearance of the creek is troublesome on account of the thickets and brambles growing near it. The stream itself is clear, cold, three feet and a half deep, and about six yards wide. Fish and turtle seem plenty. Game is here easily taken. Our hunter, the Delaware, brought in three deer and a wild turkey, besides which numerous opossums and raccoons were captured by our men.

November 18.—We were up at four and off at twenty minutes past seven. The morning was so cool that most of us took it afoot. The sun was bright and clear, with a slight but keen breeze from the northward. We took a ridge gradually, ascending from Walnut creek to the main divide, and, after travelling nine miles, made camp in an oak grove, a portion of the cross-timbers which extend in a belt varying from five to fifty miles in width for a great distance north and south. Our road was excellent, being on the summit of the divide, and overlooking a great extent of country, with Canadian and Walnut creeks frequently both in sight at one time. We passed an infinite number of hollows on both sides, heading up in the divide and cutting into it so far as to make it very narrow in some places. These hollows are all well wooded, and some carry water. At noon we encamped in the grove of oak timber, having crossed in the bottom, a hundred yards or so, before we came to it, a fine pool of water fed by a perpetual spring, affording abundant water for any number of animals, and unlike the other hollows we have passed, which have steep banks, it is in almost a flat, and very easy of access. The Delaware brought in two fine deer and two raccoons shortly after leaving camp. We saw to-day a buffalo bull, being the first we have met with. We shall now look out for Mr. Indian, as it is generally the case when buffalo are on one side of the hill an Indian is on the other. In consequence of running off to Walnut creek our road on paper would present quite a crooked appearance.

November 19.—Determined to remain all day in camp to await Mr. Steen. In looking at this country with a view to building railroads along it, I am convinced that the most feasible is in the valley of the Canadian. The bottom through which this river runs is almost always two miles wide, the stream itself never exceeds twenty feet. The bot-

tom is as level as any other meadow, and offers, as far as my judgment goes, no obstruction to the location of a railroad. On the other hand, the getting up on the divide, or the crossing in a straight line the numerous ravines which have been mentioned as cutting into it almost to the centre, would be too laborious and costly. It snowed on us last night, and this morning is gloomy, with continued snow. The Delaware brought in a fine doe.

November 20.—Saturday, laying by in camp awaiting our escort. Captain Noland, United States army, and young Ogden left us to return home, having become tired of the journey and somewhat disheartened at the gloomy appearances ahead. I discovered to-day that I was poisoned, and expect for the next two weeks a pleasant time of it.

November 21.—Left camp at about ten o'clock and moved over to our present camp five miles. A wooded and open prairie country alternately.

November 22.—Raised camp at nine and came a mile and a half, moving merely to shift our camping places and for fresh grass. We are encamped on the northern and western verge of the Cross Timbers, and find the black jack decidedly the best firewood I ever used. It seems inexhaustible in quantity. The grass here is abundant, and although the late snow storm covered it to the depth of six inches, it still affords good grazing for our animals. The Delaware killed a fat bear. The day has been bright and warm, and we hope to morrow the snow will be all gone. I have found it so far much colder on this parallel than I thought it would be. See table of barometer.

November 23.—The day broke fine and clear and the snow rapidly disappearing. Still waiting for our escort. At half past nine moved camp three miles and a quarter. Wood is now getting scarcer, as we have entirely passed the Cross Timbers, and we find it only in the ravines leading from the divide to the Washita on one side and the Canadian on the other. We are now but a few miles from Marcy's trail of 1849, and expect to strike it to-morrow if we move. The Delaware brought in a deer.

November 24.—Started at ten o'clock and came four and a half miles. Encamped at good water; wood sufficient and grass plentiful. We followed the divide, not leaving it at all, and our present camp is on a tributary of the Little Washita, separated from the waters that fall into the Canadian by a divide scarce a hundred yards wide. Still awaiting the escort, which cannot now be far behind. Mr. Green has just handed me a letter, Mr. Steen, through his adjutant, informing me that he will be up in two days. I was poisoned a few days ago, and to cure the poison used mercurial ointment on the parts affected; this produced salivation, rendering me unfit for anything in the world. The day has been warm and pleasant, with a south wind, and the snow almost entirely gone. The Delaware brought in a deer.

November 25.—We left camp this morning between seven and eight o'clock. Last night was pleased to see Dr. Duvall, the surgeon of the escort, who passed the night with us. We came to-day, in some eleven miles, to a little creek, and encamped on it, with the Canadian about two miles from us. The pulling to-day has been exceedingly

heavy, owing to the melting of the snow, which has now disappeared, excepting under sheltered banks. The wheels cut in almost to the hubs in some places, so that our mules have had a hard day of it. The soil of these prairies over which we are passing seems very rich, and I should think would produce well. They are entirely unlike those of Arkansas in composition and grasses. Here we have gamma, and bunch, and buffalo grass, than which none are better; there, only a coarse, innutricious grass, and a poor, thin soil. It is a fine running stream we are encamped on, and as it has no name, I shall call it Daught's creek. The bottom land is extensive and rich, and the whole very well timbered, making our present camp very good. It abounds in deer. The Delaware killed one, and also a buffalo, which is the first killed on the journey. We hope to see Mr. Steen here to-morrow evening, and then shall go on together.

November 26.—We lay by this day, in order that Mr. Steen may overtake us. At noon the welcome sight of the soldiers who formed my escort greeted my eyes, and in a few moments their camp was pitched close to us. Our men look finely, and the two pieces of artillery make our little party of one hundred and thirty men formidable. To this the citizens' number added makes a very fair force, especially as we are not *seeking a fight*, and only fight if attacked. The day has been warm and pleasant, with a somewhat high wind from the southward, and cloudy. The Delaware brought in a deer. Lieut. Bell killed a snake at our camp to-day. A bee tree was found in the bottom, and the bees *at work* in the tree. These facts speak well for the weather and temperature of the thirty-fifth parallel.

November 27.—We left camp at seven o'clock precisely, that being the hour I have fixed, so that the escort may have one steadfast hour to rely on for starting. We came to our present camp at one, having travelled twelve and a third miles. The country this morning has been beautiful, the divide on which we travelled undulating and covered with fine grass, and from prominent points giving grand views of prairie, woodland, and streams. Where we encamped there was a deep hole at the head of a ravine, and near the top of the divide, of some thirty feet in diameter, which was very deep and contained quite a number of fish and bull-frogs. Mr. Breckenridge, one of my men, who went out shooting last evening, did not return last night, and this morning I sent parties out to hunt him; one of them has returned unsuccessful. We have passed grass to-day as fresh almost as one would have expected in June. The Delaware killed three buffaloes to-day.

November 28.—I laid by to-day and intended to have hunted up Breckenridge, who had been lost since night before last. Two Delawares and two Shawnees had left camp a mile or so hunting him, where they found and brought him into camp; he had wandered in a bewildered state over about forty miles, and was in a wretched, dilapidated condition; the merest chance had directed his footsteps towards our camp. The country to-day has been beautiful, and the high divide which we are now travelling, between the Washita and the Canadian, makes a road perfect in everything but directness of line. We encamped on an arroyo, well wooded, which leads to the

Canadian. The grass all day has been excellent. One of our best men (Laws) was shot by the criminal carelessness of a man named Allen. The latter had been off shooting turkeys, and forgetting to let down the cock of his gun, he approached Laws and it went off, taking off the first joint of his right forefinger, then fortunately striking the barrels of Law's rifle glanced and inflicted but a slight wound in his groin. Dick, the Delaware, killed a fine buck and three turkeys; others also killed turkeys.

November 29.—Raised camp at four and off at half-past six o'clock. Travelling over a magnificent prairie nine miles, with abundant timber in sight and occasional bands of buffalo, we passed the rock Mary, a singular sandstone butte with forked summit, about two miles to our left, and soon after encamped near some curious sandstone buttes, which I called after the commander of my escort, "Steen's Buttes." From the one nearest us, which I ascended, the view was magnificent. Off to the south sixty or seventy miles the Witchita mountains were in plain sight, and also many wooded lines marking water-courses and ravines leading to the Washita. To the west the boundless prairie spread out before us, and to the north the timber of the Clear creek could be traced to its mouth in the Canadian, the line of which latter stream was well defined by its timber and banks. Our camp is just at the head of what the Indians call Sugar Tree valley, and a point of black jack which seems to have gotten lost from the cross timbers and comes close to it. The banks of this valley, or cañon, are precipitous in most places, but in others slope so as to admit of loose animals going down the sides without difficulty. The bottom once reached, after a descent of the banks, which are about fifty yards high, we find a valley of level land grown up with large trees, many of them sugar trees, and a number of fine springs breaking out on all sides, which, uniting a short distance below, afford quite a stream of clear, sparkling water. The valley, narrow at first, being only fifty yards or so in width, widens to one of half a mile at some distance below, and contains fine grass and timber throughout. Here would be a charming place for California travellers to come and winter with their stock and start on in the spring. No storm could ever injure their cattle securely sheltered in the valley, while the open prairie would afford an inexhaustible supply of grass for hundreds of thousands of cattle. From this point onward we have no guide, as Mr. Chisholm, who has been with us, knows the country no further; yet his judgment is so mature that I shall endeavor to persuade him to accompany us all the way to Anton Chico. The Delaware killed four buffaloes this morning. After dinner Dr. Floyd and myself took our rifles and went down the stream exploring. We found it widening gradually at two miles from camp; a fork came in on our right; the water of this fork was clear, sparkling and rapid; it was not over two yards in width and about two and a half feet in depth; where the two joined the valley was beautiful. The hills had softened into a gentle ascent on either side, or rather the prairie became an undulating one, and the fine grass was knee high. Timber in the bottom was very abundant and of the usual bottom growth; black jack covered the hills in many places. It is evidently a favorite resort of buffalo, deer, turkeys and raccoons, for

their fresh tracks covered the surface, but unfortunately a fire had broken out from the camp of the escort which the wind was carrying with fearful rapidity in the direction of the valley. We found here everything desirable for the location of a first class military post; abundance of wood, water, grass, and game of all description; besides which, it is just on the range of the Comanches, or rather it is about their eastern range. Up to this point three or four could travel in safety from the settlements, and emigrants collecting here could form in companies large enough to protect themselves through the dangerous Indian country lying to the westward; on this account a post here would be more desirable than one further on; I decidedly prefer it to any other place we have seen for the location of a military post. A raccoon was killed by one of the men weighing twenty-eight pounds.

November 30.—We were up at four o'clock, and off before sunrise. Travelling over a beautiful country, we came, at half-past eleven, to a small ravine and stream running into the Washita; here we halted, and spent two hours grazing our mules on the fine grass; starting on again, we pursued our way over a vast prairie abounding in buffalo and a few antelope. At four o'clock, having made nineteen miles and a half, we turned off the road a half mile to a little rivulet bearing a scant supply of trees upon its banks, and encamped for the night. We have passed this evening immense deposits of gypsum, which seems to be of excellent quality. According to Mr. Chisholm, whom I succeeded in persuading to accompany us, this is one of the heads of Clear creek, a tributary of the Canadian. He says Clear creek is the best stream in the country, and better than the Sugar Tree valley, described yesterday, for a military post, but I cannot conceive that it can be better. To my mind, the great fault of our military posts is, that they are built too permanently, and at too great cost, so that we frequently hold on to them long after they have ceased to be useful, rather than abandon places which have been built at such great expense. With a constantly or yearly extending frontier, we build posts as though our frontiers were permanent. No military posts such as ours should be erected on the frontier; they should be simply temporary camps, which could be abandoned at any time without loss. It is evident that, for the protection of our mails, (I have before mentioned that a contract has been let, and that the contractor is now with us, from Neosho to Santa Fé, on this road,) and emigrants over this route, a post somewhere in this vicinity is imperatively called for. The Delaware killed three buffaloes to-day. I engaged to-day a Shawnee hunter, who had come out with Chisholm. His name is Little Axe, and as a hunter he ranks in the first class.

December 1.—Up at four and off at half-past six o'clock. Travelling about seven miles over a lovely country brought us to Gypsum creek, which we found a clear, bright, flowing stream, tributary to the Washita. Here we turned our animals out to graze while we engaged ourselves in preparing the banks of the stream for the passage of the wagons. Having bridged the stream, we crossed it; and after leaving Gypsum creek we came, in five miles, to Bear creek, which we also bridged, but which will require another of a more permanent character. Leaving Bear creek, three miles brought us to Elm creek,

on which we encamped, and which we shall either bridge or work the banks sufficiently to pass in the morning. The road all day has been over a rolling prairie, and is excellent throughout. Many buffaloes were seen to-day. The Delaware and Little Axe killed four, but only brought in the meat of one, which was a very fat cow. Gypsum has abounded everywhere to-day, and the soil is without fault. Timber and grass have been abundant at all the streams we have passed, but do not exist elsewhere.

December 2.—Finding Elm creek required not only a very deep cut, but also a bridge to render it passable, I commenced on it at daylight, with our whole force; and timber being abundant and close at hand, by three o'clock the cut and bridge were both ready. We then crossed it; but before getting over, the day, which had been threatening, turned out a storm norther; and after going a mile or so, we were obliged to seek shelter on our left, where a bend of the Washita, having a high bank before reaching the regular river bottom, afforded us excellent shelter, and good grass for our animals. During the evening snow fell in successive squalls. The Delaware and Little Axe killed a very fine cow buffalo.

December 3.—The night past has been a hard one. A stiff northwest wind, accompanied by hail, rain, and snow, has rendered it a most unhealthy one for our animals as well as men. The morning looked so threatening that I determined to remain in the camp, as our next move must take us to the divide, where the wind will have a clear sweep at us. Dick, the Delaware, and Little Axe killed a fine buffalo near camp. We dined to-day on buffalo, fat raccoon, venison, and marrow bones. On our wagon was wild turkey, and opossum, and side of bear, and Mr. Baker this evening killed a good bunch of rice birds, or, as we call them at home, reed birds. The President himself could not sit down to such a table. The country between here and Elm creek is level; one ravine exists, at which a wagon was upset, but by crossing to the left in the bottom that difficulty is avoided.

December 4.—We left camp this morning on the Washita, and shortly after, in two miles and a half, came to a creek which we supposed to be the Comet creek of Lieut. Whipple, though his distance on the map would have made it some fifteen miles beyond. The morning turned out badly; rain, sleet, and snow fell on us at intervals all day, and the night promises more. Arriving at the banks of the creek, we found them high and the bottom boggy. I immediately set to work to bridge it, which we accomplished by sundown. All the creeks we have passed for the last three days will require permanent bridges of iron, so that the Indians cannot burn them, or else the emigrant must follow the divide to the great loss of time and distance. The valley of the Washita is the widest and most productive we have seen, and in time will afford homes to thousands who are now without them. The whole country abounds in wild turkey, deer, and buffalo. The Delaware killed a fine doe this evening. At this camp a singular thing occurred. The ground was covered with birds resembling reed birds; I think over two hundred of these delicious little fellows were killed with switches by our men. Mr. George Beale alone killed thirty with only a willow switch about eight feet long.

Up to this point we have found the road superabundantly supplied with water, wood, and grass, and unquestionably protected with military posts—the best emigrant road between the frontier of the States and California. Suffering intensely all day with rheumatism. The bottom lands of this creek resemble in fertility those of the Washita, and are well timbered.

December 5.—We left camp late this morning, (nine o'clock,) and travelled seventeen miles, arriving at five o'clock at a small stream with a thread of water passing between steep banks. There was cotton-wood and ash quite sufficient for fuel, and fine grass in abundance. Our road to-day passed over a high rolling and sometimes a hilly prairie, passing some ravines, but none of them difficult. After coming fifteen miles, we arrived at the dry bed of a stream, at the crossing of which there was no timber, but sufficient for fuel a little below. Here I had intended to camp, being under the impression it was the Silver creek of Lieut. Whipple, but finding no water in it we came on two miles further to our present camp. On a hill passed to-day many shells were picked up by our party, some of which resembled those of the oyster. Buffalo plenty. The Delaware and Little Axe killed four. Pony tracks have been seen this evening, denoting the presence of Comanches.

December 6.—Raised camp at a quarter past eight, and, travelling four miles, came to Marcou creek. This we bridged. The bottom was fine, rich land, with timber sufficient, and buffalo were grazing on it as we came up. Crossing the bridge, we travelled five miles to Wood creek, which we found almost dry, but, bridging it, we crossed, and in two miles and a half came to Oak creek. This we found a fine stream, running between steep banks, well fringed with cotton-wood, elm, and a few oak. The creek is exceedingly crooked, making almost islands at every few hundred yards. The bottom lands of this creek are wide. I should suppose on both sides included fully a mile and a half, and very rich, bearing most excellent grasses—mesquit, gramma, and buffalo. Our road to-day has been over high rolling prairie for the most part, and excellent in all respects. The creek we are encamped upon forks about a short half mile above our camp. The fork runs off to the northward, while the stream keeps a more westwardly course. Buffalo have been abundant all day. The Delaware and Little Axe killed two and a deer. The morning was exceedingly disagreeable, cold, freezing and misty, but it cleared at noon, and the evening was delightfully pleasant, clear and warm. We shall bridge this stream in the morning.

December 7.—We were engaged until three o'clock in bridging Oak creek, the banks of which are high and steep. The weather has been excessively cold, the thermometer this morning being only ten degrees above zero, and a high north wind blowing all day. At half-past three we raised camp, and, crossing the bridge, came about two miles, and encamped in a sheltered bend of the river on the west side. We passed this evening a broad, well defined wagon trail running north and south, which I supposed to be that of a man named Prole, who a year or two since started with a large party gold hunting and got lost, and, after twisting and turning in every direction, at last got

over to the Washita, and so home. The Delaware and Little Axe killed a buffalo.

December 8.—We left camp at half-past eight o'clock, crossed the bridge we had made, and in a mile or so arrived at a fork of Oak creek, which we also crossed, leaving behind us a trail we had followed, and supposed to be Whipple's, and took the divide. We found the country on either side cut up into rugged ravines of red clay and sandstone, and frequently curious-looking mounds. At times the divide narrowed and became rough for considerable distances; nevertheless, the road as a whole was good, and, travelling fifteen miles, we saw from the top of the divide the Antelope Hills, and to our left the Canadian. Travelling down an affluent of the latter two miles brought us to a fork of it containing water, on which we encamped. The ice was so thick upon it that we had to cut through for our animals to drink, and found the water slightly brackish, though not unpleasant. We passed to-day large patches of dwarf oak, which in places covered the prairie for acres. About three miles from the little fork on which we are encamped was a circle of small oak perfectly round and having a spring in the centre. The morning was bitter cold, but towards noon it became warmer, and the evening was very pleasant. The Delaware and Little Axe killed four buffaloes and a deer. We travelled to-day seventeen miles. Many wooded forks or small tributaries of the Washita and Canadian were seen to-day putting out from the divide; in some water was found, in others none. The Antelope Hills are of the same form, and differ but little in general appearance from the natural mounds described some days back, to which I gave the name of Steen's Buttes. Last night one of Lieut. Steen's sentries shot another, who failed to hear his challenge in the high wind, the wound likely to be severe. Oak creek I think an excellent location for a military post.

December 9.—Left camp at eight o'clock, and crossed a fork of the stream we had encamped on; and crossing a spur of the divide, and shortly after another, thence by an easy descent we reached the Canadian. We found it very much as described at our previous crossing, excepting that there was less wood upon its banks, and apparently a little more water in the bed. Some distance above, on the opposite bank, was a sugar-loaf shaped red knob, making a good landmark for our night's camp, as it is nearly opposite the small stream running into the Canadian, on which we encamped for the night. Directly opposite camp another stream empties into the river, and has a large motte of timber at its mouth. From where we struck the river we travelled up the bottom for a mile or two, directly towards the Antelope Hills, which are in plain view, and then going out on hills a mile or two more, came to camp in a sheltered valley tolerably wooded, and having abundance of water in large pools, which tasted of sulphur. To-morrow we shall follow the river bottom for a mile and a half, when we shall go out on the hills and cut off at a bend the river seems to make to the northward. Looking ahead at the country, it seems to promise a more level road than we have lately had. Buffaloes have not been so abundant to-day; nevertheless, the Delaware and Little Axe killed two or three. The more I see of this river, its wide

bottom, level surface, soil, (clay and sand,) and its evident freedom from overflow, the more I am convinced that it offers decidedly the most level line for a railroad to be found for the same distance between the Pacific and Atlantic. To this point there cannot be urged a single objection, unless it may be that wood does not here seem to be very abundant. The Washita, however, which is not far from it at this point, and which is a finely-timbered stream, might afford all the requisite wood for cross-ties, &c.; and the distance to haul from that river to this is inconsiderable.

December 10.—Left camp at a quarter past eight, and travelling up the river bottom for about two miles, took to the hill-sides, and going west towards the Antelope Hills, crossed several scantily-wooded streams of small size, tributaries of the Canadian, in only one of which we found water; we passed between the Antelope Hills, which we found high mesa or table-top hills of white rotten sandstone; thence over a hilly prairie country, covered with fine grass, we came to camp on a small tributary of the river, pretty well timbered, and containing fine running water, fifteen miles from our former camp. On looking at the river from elevated points, so that I could observe it for some distance, only a few mottes of timber could be seen, and not in such quantities as to admit of a great deal of shelter. Buffalo are becoming scarcer, yet the Delaware and Little Axe killed three and a deer.

December 11.—Left camp at half-past seven, and passing over long stretches of prairie, intersected frequently by deep valleys and water-courses, sometimes well wooded and at others but scantily, sometimes containing water and at others only a dry sandy bed, we came at noon to one containing running water, at which we stopped an hour to water and graze our animals. About four miles further on we encamped, having made fourteen miles and a half, and quite near within a mile of the Canadian. A mile before camping we crossed a stream, the water of which was not frozen—a circumstance which proved it to be fed by springs. In this stream were fish resembling pike, and quite numerous. Our road to-day has been nearly parallel to the river, occasionally cutting off at a bend, and at others close within a mile of it; the soil has been a sandy loam, with sometimes long stretches of gravel of a very fine quality. The whole day's travel has been (as, indeed, our whole road) covered with abundant grass of gramma and buffalo; brown sedge is a common growth in small patches, but the other grasses mentioned are everywhere most luxuriant. In looking along the river we frequently saw mottes of timber—some of them extensive, others in small bunches. To-day we have not seen a single buffalo, and the Delaware and Little Axe only brought in two wild turkeys as the result of their day's hunt. We have passed to-day many prairie dog villages; at one, while looking around for a shot, I came near stepping on a rattle-snake, but warned by his rattle, stepped back and killed it. It was one of six rattles; and the fact of its being abroad was hailed as an omen of good weather. The day has been warm and delightful, and the night is clear and calm.

December 12.—Left camp at half-past seven, and followed a road

very much such as yesterday, crossing extensive plateaus, deep valleys, and ravines, some of which were well timbered, and containing water in pools. Nine miles brought us to a fine running stream, on which I nooned and grazed the animals, and called Floyd's creek, after Dr. Floyd, the surgeon of the expedition; gravel hills were passed frequently, and the soil generally was sand and loam, and grass abundant; timber on the Canadian appeared in larger mottes and more frequently; in places the river was fringed for miles with cotton-woods. After leaving our noon camp we came down to the river bottom, on which we travelled a mile or so; then ascended the banks, and, after a mile or two, took again to the bottom, and travelled sometimes on the bottom and at others on the banks, until we came to Dry river; this we found a wide, sandy bed, the banks very well wooded, and entirely undeserving its name, as it was running a brisk stream thirty-five or forty feet wide of clear water. We have passed some natural mounds of mesa formation to-day, and others lay still ahead and to our left. Our day's travel has been sixteen and a half miles; the river bottom, the more I see of it, convinces me that the most direct and easy line for a railroad must lay along its level surface; it is here a mile and more perhaps in width, and looking down and up it to-day we could see perfectly straight stretches of over twenty miles; smoke has been seen ahead to-day, indicating Indians. The Delaware and Little Axe killed to-day a buffalo and eight wild turkeys; the weather has been mild and delightful all day, and the night is calm, clear, and pleasant.

December 13.—Raised camp at a quarter past seven, and travelling seventeen miles, encamped at the mouth of a dry creek, the mouth of which was broad and pretty thickly timbered with cotton-wood and elm. Our way to-day has been sometimes in the broad river bottom, and at others on the banks bordering, and the whole very good, with not a heavy hill on it. Opposite our camp this evening is a broken range of mesa hills resembling the natural mounds passed on this side of the river to-day, and evidently at one time connected with them; they are striking in shape, being for the most part like ruined fortresses. Timber to-day has been abundant at many points along the river; I noticed especially too very broadly timbered creeks of elm, ash, and cotton-woods coming into the Canadian on the opposite side; on this side the creek seems not so bountifully supplied, though there has been quite sufficient. We nooned for an hour on a creek having no timber, but fine water in pools. It is worthy of remark, that for the past week on all the streams we have crossed there has been found a great number of grapevines, looking as if they were regularly trimmed, the bush being short, and growing, not as wild grapes generally do, on trees, but just as in a vineyard; wild plum trees have also been very abundant; there was more sand and gravel in the line of our march to-day than previously, though not enough of the former to make heavy pulling. Little Axe killed a large panther, and the Delaware two wild turkeys to-day.

December 14.—Raised camp at half-past seven, and travelling seven miles, arrived on the banks of Valley river, a clear, sluggish stream, which at times empties into the Canadian, but at present a sand bar

shuts its mouth, rendering it passable dry-shod. We crossed some distance, say three hundred yards, above with our wagons, and stopped to noon and water on the western bank. We found the bottom only tolerably wooded and very sandy, with but little grass, and that of poor quality. Travelling four miles further up the bottom of the Canadian, which here a way is scantily timbered, encamped, having made eleven miles. The road of to-day has been more sandy than any we have seen on the river; and on the left drifted sand hills of considerable height have made their appearance. The Delaware and Little Axe killed three turkeys.

December 15.—Raised camp at a quarter past seven o'clock, and pursued our way up the level river bottom, only leaving it to cross a short spur and valley containing a fine stream of clear water, which I named Chester creek. Passing a fine motte or two of timber, we nooned for an hour at a point where we found water in small pools near the edge of the bottom, and fine gramma grass on the hill-side. Within a mile or two, after nooning, we passed Spring valley at its mouth, which was a bold spring coming out of a patch of cat-tail and rushes on the hill-side, and a little timber. Coming thence up the bottom, which was sandy, and passing many gravel hills on our left, we came to camp on a dry stream, near the Canadian. Here we found a wide bottom, filled with excellent gramma grass and abundance of wood; our water we got from the river, a few hundred yards distant. The mesa formation on the north bank seems to give out here, and seems to soften out ahead into plains and rolling prairie. We made to-day fifteen miles; the road has been very good, though sandy in places. The Delaware killed a fine deer and a raccoon, and Little Axe two wild geese. My greyhounds brought down a fine deer, after a short but gallant race over the hills—Nero taking the lead, with Fannie, Prince, Buck, and Remus close after him. Indians have been on the other side of the river within twenty-four hours; the Delaware seeing a pony, which had either escaped them or had been left behind, crossed and brought it into camp. This country will some day be as great a vine-growing region as California. On every creek the grapevines abound, and the soil, a sandy loam, seems particularly adapted to their growth. As I have before stated, they do not run on trees, but grow, like cultivated vines, short and bushy.

December 16.—Raised camp at a quarter past seven, and travelling about four miles up the bottom, we left it, where the bluff came down to the river's edge, and crossing the spur, descended again into the bottom, at the mouth of Bluff creek, a good running stream of water. Nearly opposite, on the other side, we saw the ruins of Bill Bent's trading-house, which was once a branch of the celebrated Bent's Fort, on the Arkansas, above the Big Timbers. Some two or three of us crossed the river, (which we found about eight feet deep, running in several channels filled with much ice, and some eighty to a hundred yards from bank to bank,) and examined it. It was pleasantly situated, having a spring and good stream of water, and up the valley, at the mouth of which it is built, timber sufficient. Indians had been encamped within the old walls but a few days previous, and the amount of old signs proved a favorite camping place with them. The pre-

vious eccentric proprietor becoming disgusted one day at the Indians, who had killed some of his oxen, fired it, and left for his old home, at Bent's Fort. Following the river bottom three miles or so further, we again ascended the bluff where the hills touched the river, and crossing the spur, and travelling three miles further, stopped to noon on the river, and nearly opposite a red high mesa bluff on the north bank. Leaving our noon camp we came, in a mile, to a fine clear creek, sixty feet or more in width, with a hard, sandy bottom, which I called Crump's creek. Leaving, this and travelling about seven miles, over an excellent hard sand and clay bottom, we came to a camp on Moale creek, having made nineteen and a half miles. At this place we found the best camp since starting. The gramma grass was knee high, and timber felled to our hands by numerous Indians, who had some years previous wintered here; also a fine running brook of water. Our road all day has been good, and the weather delightful, as in fact it has been for the past week. All the hills passed to-day, and forming the bluffs of the river, contained gravel or white sandstone, with now and then some little gypsum. The river bottom generally seems too sandy to produce grain well, but abounds in bottom grass, and all the hills near it are covered with gramma, which will render this a famous grazing country. Timber on the river to-day occurs in mottes, as heretofore, and in some places these mottes are extensive. It appears that on the other side the tributaries of the river are as frequent as on the side we have travelled, so that a vast extent of country will some day be opened up for settlement in this region. The Delaware and Little Axe killed a deer and turkey.

December 17.—Raised camp at twelve minutes past seven, and following the river bottom four or five miles, we turned off to the southward, where a ravine entered the bottom, and, following it a short distance, ascended to the prairie. We bid good-bye to the Canadian with great regret, for not only had the travelling been good along its banks, but the scenery had been varied and the weather delightful. Where we left it the bottom was as wide as ever, and but that we were short of provisions and feared detention, should have followed it to its fork, the Conchas creek, and gone thence to Anton Chico. The formation of its banks where we abandoned it seemed to promise a still more picturesque scenery, being bold, high bluffs of red clay, sprinkled over with white sandstone, and cut into chasms and gullies. Travelling over the hill which led to the prairie, and which we found no trouble in ascending, we passed over a fine rolling country covered with rich grass and a soil fertile though gravelly. The road was the best we had met with since leaving, and at noon we had reached a spring in a hollow or ravine to the left of the road, and five miles from the hill leading to the prairie from the river bottom. Remaining here an hour, we again started, and, after travelling about seven miles, reached White Sandy creek. This stream is fine, pure, clear running water at this time, and grass abundant, but wood scarce at the crossing, though it has a thicket or two above. In crossing from the spring to White Sandy one sees on the left one isolated peak of no considerable altitude, but remarkable as being the only one of the kind. This I called after a favorite negro servant, now on his third trip from ocean

to ocean with me, "Ab's Knob." The road the whole day excellent, the weather clear, warm, and pleasant; distance made, seventeen miles. The Delaware and Little Axe killed a deer this day.

December 18.—Having a twenty miles stretch without water, we were off before daylight, travelling thirteen miles over a road as good as any ever made by Mr. McAdam, and a fine rolling prairie. We encamped in a large valley for two hours, to rest and graze our animals on the luxuriant grass; thence eight miles brought us to "Arroyo Bonito." The evening part of the journey was heavy with sand, especially the last three or four miles. We found Arroyo Bonito a large valley well timbered, watered, and grassed. The latter exists principally in the bottom and on the west side. A large encampment of Comanches had lately left when we arrived, and in consequence game is scarce now, though they had evidently, from the signs left, found it in plenty. We saw to-day the bluff, the Llano Estacado, looming up in the distance on our left and ahead. Tucker found a spring of good water on the right hand side of the road, and within a hundred yards of it, about four miles before reaching this camp. The weather has been cloudy but pleasant all day. We have made to-day twenty-one miles. The Delaware and Little Axe killed a turkey. Our camp is on the west side, under a steep sandstone bluff.

December 19.—We left camp this morning at six o'clock, groping our way to the trail by candle light. In the first seven and a half miles (part of which was sandy) we found a fine spring with plenty of good water, and stopped to water and graze our mules. A mile or two further on we found a beautiful stream, running in clear water over rocky bottom, where we watered again. All this time we were ascending, until at noon, when, after coming thirteen miles, we came to Red Bank creek, where we stopped again to water and graze our animals. Shortly after leaving this place we ascended to the almost level prairie, and, having made twenty miles, encamped on Beautiful View creek, which is perfectly timberless, the others mentioned being nearly so. Our road, with the exception of the first four or five miles, has been of the best possible description, for a large portion of it has been beautifully gravelled, and the remainder a hard clay mixed with sand. Grass on the entire distance has been unusually abundant, even in this well-grassed country. The country passed over has been a rolling prairie; at times the valleys were so deep as almost to amount to or merit the term of hills. This morning, following down the Arroyo Bonita a mile or two, we found we were quite near the Canadian, it being in plain sight, and not over two miles distant; to-day we have travelled parallel with it, and are now not far from it. The Llano Estacado bluffs are plain in sight upon our left.

December 20.—We were up and off this morning at half-past five, travelling several miles before daybreak. The road all day excellent, and over rolling prairie; we ascended gradually until half-past ten, when we stopped to breakfast at a pretty creek on the left of the road, tolerably supplied with timber, and water abundant in large pools; at this place we had made eleven miles. Starting at one o'clock, we pursued our road over the same character of country until sundown,

at which time we ascended the mesa of Llano Estacado, and encamped on its summit without wood or water, but with abundant grass. On our left, three miles before coming to our present camp, we passed the "Rincon de La Cruz," a ravine coming out of the Llano, and having water and grass, with sufficient wood for cooking; but as I was not at that time with the train, it was passed by without stopping. We have made to-day within a fraction of twenty-two miles. Before reaching our camp a fresh Indian trail was passed, apparently not twenty minutes old; this makes us doubly watchful to-night, as well as anxious, lest possibly we may lose a mule or two, to say nothing of train. We have travelled all day towards the bluffs of the Llano, on whose summit we are now encamped; it presents a bold, well-defined outline as far as it can be seen, and is only to be ascended by wagons at certain points; leaving our noon camp we still constantly ascended, but on reaching the top, a broad and smooth prairie spread itself before us. Excepting the wood on the creek on which we nooned, and at the "Rincon de La Cruz," we have not seen a stick of wood to-day, saving a few mesquit bushes.

December 21.—We were up at half-past three and off at four o'clock. Travelling six miles and a half over a road as level as a floor, we came to Aqua Piedra, a ravine containing a fine stream of water, *running* a border of trees and abundant grass; the descent to, and ascent from, the valley was excellent. Remaining here two hours and a half, we started again, and travelling over the dead level plain, we camped for an hour to graze our animals on the prairie. The grass on this plain is everywhere abundant, but of water there is none, unless at times the rains may leave a pool or two standing in the old buffalo wallows. We saw not a living thing but a prairie dog and antelope or two, and a crow, in crossing this extensive plain. Evidences enough exist that years ago buffalo have grazed on its fine grasses, but now there is not one to be seen, or the sign of one less than ten years old. Leaving our last camp, where we rested our animals, and travelling about nine miles, brought us to Rocky Dell creek; to arrive at this place, we pitched off the bluff of the Llano, and found a miserable, treeless, dry bed of a stream, without a stick of timber, and the water in it only discoverable, after considerable search, in a pool in the rocky bed of the creek. We came to this place at night-fall, and found nothing to recommend it but the grass, which, though not as abundant as elsewhere, was good and quite sufficient. Some of our people found some scratchings on the rocks, which the idle Indians had picked on with stones. I do not know what signification they had, or whether any. We made to-day twenty-six miles and a half from the camp at the summit of the Llano to Rocky Dell creek. The Llano is treeless, and, as far as one can see, is one monotonous level plain.

December 22.—Leaving Rocky Dell at five in the morning, we travelled over an undulating plain, with excellent hard soil and good road, for eleven miles, passing a ravine or two on our way, which in the rains may contain water, but are dry at present. At this time we came to Emigrant creek, a good stream of water existing in pools; here we stopped to breakfast; grass abundant, but wood scarce, there being only a few scattering cotton-wood trees growing on the stream. As

we travelled this morning the bluff of Llano was on our left, and rendered the landscape agreeable by its bold and picturesque appearance. Leaving the noon encampment, we traversed a country generally excellent for nine miles, when we encamped on a small stream of water slightly brackish. There was not a stick of timber as large as a man's little finger, or any substitute for wood, such as bushes or buffalo chips, so that we used a little dry wood I had caused to be packed away in the wagons. This country is treeless, except the bluffs of the Llano, which are speckled over with cedars, but unfortunately the road does not run within four or five miles. My greyhounds this evening brought down and killed a fine fat buck antelope; only two were in the race, which was in full view of the whole camp; the hounds, Buck and Fannie, ran in upon and killed it within a mile of the point from which they started; the pace was tremendous, and, take it altogether, it was one of the prettiest bursts of speed I ever saw. The weather this evening looked threatening, and a hard north wind blew for a short time, but at sundown the prevailing wind from the southwest had again established its supremacy. The country travelled this evening has been of the finest character for grazing purposes, and as far as one could see retained the same character.

December 23.—We were up at four and off at five o'clock. Since leaving the escort we travel several miles before daybreak, so that we may stop to rest and graze our mules on the road, and at the same time make a good day's travel. The country this morning precisely the same as yesterday, not a tree to be seen except on the distant bluffs of the Llano. After leaving camp, in two miles and a half we came to a creek similar to the one we had left in every respect. Two miles and a half further we found another, and, travelling eight miles further and seeing no timber, I stopped near a dry-water drain in the prairie, where the grass was uncommonly good, to graze and rest my mules. The men, having saved a few sticks of wood from last night's camp, got breakfast at this place. Leaving our dry breakfast camp, we passed over a rolling country and several ravines, one of which contained water to the right of the road, at a distance of a mile or so, but not discovering it till the train had passed, we continued on three miles further, and found water in pools, and in some places running in a ravine, in which were a few cotton-wood trees; the water was above the crossing about five hundred yards, and the trees below. We made to-day twenty-eight miles. On our left the bluffs of the Llano were densely covered with cedars, and not merely dotted over, as heretofore. The soil to-day has been a little sandy, but the road as good as any we have had. To our right at this camp is a curiously-shaped table mountain, making a landmark to be seen many miles around; it is distant from us about six or seven miles. We killed a beef yesterday which we had worked in a heavily-laden wagon two-thirds of the distance to this point. It was fed no grain, and subsisted entirely on grass. The beef was fit for the Philadelphia market. A book could say no more for the grass on this route.

December 24.—Up at four and off at five. Leaving our last night's camp, we travelled over a lovely country, finding the scenery of the most agreeable and varied character. Towards two o'clock we found water

and a little wood in a ravine, and encamped for breakfast. The water was in pools, and not very abundant. Going along before daylight this morning the Delaware and Little Axe captured two ponies, but discovering sheep tracks in the road, knew they belonged to the Pastores; sent them back. Leaving breakfast camp, up to which we had made thirteen miles and a half, we travelled eleven and a half more without finding water, when, seeing some cotton-wood trees a mile or more to our left, off the road, we drove down to them, and found water, wood, and grass in great abundance. As we proceed the mesa hills seem shut in ahead, so that we look forward with curiosity to what to-morrow will bring forth. The mesa sides are all densely covered with cedars.

December 25.—Up at four and off at five. Travelling up the valley, through the same description of country as that of yesterday, and all the while, with the exception of the last four or five miles, gradually ascending, we reached, after seventeen miles, the Laguna Colorado, a pond of about thirty-five yards diameter, of sweet but muddy water. We reached here about noon, and, as we had marched seventeen miles, and it was Christmas day, I determined to remain at rest for the remainder of the day. This is an excellent camp; wood, water, and grass in abundance, and in the event of a stormy spell, the fine ravines of the Mesa afford ample protection. The valley is very extensive, and seems to contain about half a million acres of good land. I do not know, however, of any water than that of the lake we are encamped on. In it game seems abundant. While we were at work a deer walked fearlessly down to the water's edge, in full view of the whole camp, and, after drinking, stood gazing at us until the Delaware took his rifle and killed it. Our Christmas has been a very happy one. I had saved from our surplus some twenty fine wild turkeys, which had been killed and preserved by the cold weather, so that each mess had its turkey, besides its fresh meat, being only short of bread. We had buffalo, deer, antelope, raccoon, prairie dog, wild turkey, and grouse in our wagons to-day, and enough of all for a fine Christmas feast. The morning threatened a storm, but about ten it cleared, and the day has since been delightful.

December 26.—Up at four and off at five o'clock. By a long ascent we reached a level plain covered with cedar and pinon pine. Pursuing this plain a short distance, we descended to the Arroyo de Pajarito. Before doing so, about a mile back, we passed, on our left, a good spring. At the Arroyo we found water and grass plenty, with a little wood. Leaving at one, we came in eleven miles over a good road, ascending, and a beautiful country, the Cuerbito, (Little Crow,) where we found good grass and water, but little wood, though cedars a half mile south of where we encamped were abundant off the road. Here I met some Mexican hunters, one of whom guides us to-morrow to Mr. Hatch's, near the town of Chaparitos, at which place I propose to encamp to rest our animals. Little Axe having wounded a buck antelope slightly, my dogs pulled him down, near camp, very handsomely. The road excellent all day, and the country beautiful. We made twenty and a quarter miles, and encamped at four p. m.

December 28.—Up at half-past three and off at four o'clock. By

daylight we had made seven miles, when I encamped for breakfast, having discovered water about half a mile off, in a cañon to our left; the road has been excellent all day, being over a rolling, ascending country of great beauty. At noon we encamped on the Esteros for an hour, having crossed the divide between the Pecos and the Canadian, this being the first tributary of the latter. At this point I left my train and road, with orders to the Delaware and Little Axe to follow my horse's tracks across the prairie, and for the train to follow them twelve miles and then encamp until daybreak, when in the same manner they would come on to Hatch's ranch. Accompanied by the Mexican hunter, I arrived at Hatch's where I was most hospitably received at eight o'clock at night. The next day the train came in about noon. Hatch's rancho is eighty miles from Santa Fé, fourteen from Anton Chico, twenty-five from Las Vegas, forty from Fort Union, and one hundred and thirty from Albuquerque. The little town of Chaparito is three miles off. Corn, provisions, clothing, and a hearty welcome may always be found here. This rancho is situated on the Gallinas, a fine, bold, running, clear stream of some twenty-five or thirty yards width; a few years ago it was the frontier settlement of New Mexico, but the frontiers of New Mexico, like those of our western States, are extending, and now the town of Chaparito is beyond the rancho.

January, 1859.—I spent the month of January in making an official visit to Santa Fé, and a social one to my old and esteemed friend Kit Carson.

At Taos, February 7, 1859.—I started this morning to look at the country between Hatch's rancho and the Canadian, on a line nearly east, and by which I hoped to find a nearer road than the one we travelled in coming in. The road we came was excellent, but my expectation in this journey is to go to the mouth of the Conchas river in the Canadian, and thereby shorten the distance, as well as to bring the road by a water-course, instead of leaving the river where we did. If we succeed, our road will follow the Canadian a hundred and eighty or two hundred miles further, and leaving it, the Conchas will bring us to within a few miles of Hatch's rancho and the towns of Anton Chico and Chaparito. Leaving Hatch's, we came, in six or eight miles, to the divide between the waters of the Pecos and those of the Canadian. Here a most extensive prospect opened before us; a vast undulating plain bounded on the north by mesas and to the southward by plains, and isolated mesas stretched far toward the Canadian, and seemed to reach at least fifty miles in extent. Coming off the divide by an abrupt descent, we reached this rolling plain, which we found excellently well watered by numerous streams, though mostly small, covered everywhere with fine grass, and abundantly timbered with cedar and pinon. Having travelled twenty-five miles over a magnificent natural road, we encamped at night on a small stream, with timber in abundance close at hand. A high wind blowing all day, and the weather cloudy.

February 8.—At eight o'clock this morning we were off again, and pursuing the same spacious valley or plain, over a country precisely such as described yesterday, we encamped at one, on a small stream

having water in holes, in one of which I saw fish; the morning has been raw and threatening rain, which caused me to encamp, after making only thirteen miles; our course, nearly east, seems to be entering a narrow valley, in which I hope to find the Conches; and after going to its mouth, to return up it all the way back to within a short distance of our camp.

February 9.—Entering the narrow valley spoken of yesterday, which is a mile and a half wide, we emerged, after half an hour's travel, into another vast extent of undulating prairie land, bounded on all sides by mesas, which, instead of rising abruptly from the plain, sloped to it with a rather steep ascent, which was rendered agreeable to the eye by the lights and shadows resting upon its broad breast, as well as by the variegated hues of the different grasses, and the dark green of pines and cedars. Into this wide basin numerous small streams enter, and traversing it, flow into the Canadian; water was everywhere abundant, and the grass of unsurpassed excellence. After travelling about ten miles nearly east we struck the Canadian. It is at this point a noble mountain stream, clear, rapid, and deep, running over a rocky bed and frequently breaking into sparkling ripples; following it some eight miles we encamped on a small tributary about a mile from the river. The route to-day has passed over a country offering not the slightest obstructions to wagons, and unexceptionable in every respect. Beaver are abundant on the river, but unfortunately Little Axe and the Delaware left their traps at camp, so that we have taken none; since our arrival at Hatch's they have trapped only seven on the Gallinas. The weather delightful.

February 10.—Leaving our camp of last night, we soon approached the Narrows, or Angosturas, as the Mexicans term it. From all that I had heard, I had looked forward to this place as forming an insurmountable obstacle to a road ascending the river, and was delighted to find, instead of the dreadful cañon I had pictured it, extending for many miles, a place which ten men in as many days would render an excellent road; it simply requires the loose stone to be removed, and a few gullies filled, to make it perfectly good. On the opposite side of the river there is no obstruction, but where so little work is required it would be idle to think of bridging. The Narrows are caused by a long cape of the mesa impinging on the river, and are not over two or three miles in length. Coming out of this gorge, a country of great beauty opened before us; the valley of the river, five to seven miles in width, stretched as far as we could see to the eastward, the river running through the centre, with a line of large cotton-woods marking its course, and at intervals heavy groves making out into the meadows on either side; the soil seemed of great fertility, and as we looked upon the immense tract of waste land, which would feed thousands, we regretted that the want of protection against a few barbarous savages should prevent the occupation by civilized men of such a lovely region. Some distance down the valley we could see smoke arising from Indian (Comanche) fires; and as we were but ten, and had seen all we came to look at (the Angosturas,) we rested our animals for a couple of hours, improving the time by killing wild turkeys, with which the bottom abounded, and then returned to where we first struck the

river; to-morrow I shall follow it to the mouth of the Conchas, and by that stream hope to return nearly to camp; the wind being high, moved camp up the Canadian, finding the same broad and level valley, equally fertile with that seen below, and fringed with cotton-wood, hackberry, and willow, and encamped in a thick grove of box elder under a bank, affording us a well-protected camp; the Delaware and Little Axe having killed five wild turkeys, we supped sumptuously. The Angosturas, or Narrows, are about three miles in length.

February 11.—The morning beautifully clear and the day like one in the early part of June at home. Travelled up the Canadian, finding it a noble bottom, such as heretofore described, until we came to the mouth of the Conchas; this we found to enter the Canadian where both cañon. The Canadian commences its cañon about a quarter of a mile before the Conchas entered it; the Conchas we followed from its mouth to our present camp, and found it to run through a cañon all the way, say a half a mile; how far up the cañon extends I do not know, but shall see to-morrow. The cañon is about one hundred feet deep in places, and accessible quite often where drains from the valley fall into it, and is about fifty or perhaps sixty yards across; the water is clear, the stream rippling over a rocky bottom and forming large pools of sometimes more than five hundred yards' length and from eight to twelve feet in depth, its average width being about twenty feet. Our wagon has followed over the country to points indicated without finding any difficulty, which shows the easy character of its surface; grass everywhere abundant and no lack of timber; the country we are traversing seems a vast basin of undulating surface bounded by high mesas; it is decidedly the best watered country in New Mexico, and would be considered well watered in any part of the world; of its fertility the grass is sufficient indication. In the narrow valley of the Conchas we found luxuriant grass of many kinds and a growth of dwarf oak and hackberry; shells were abundant, hence its name, Conchas, a shell. The Delaware and Little Axe killed two white-tailed deer.

February 12.—Pursuing our way up the Conchas, we found it coming out of the cañon in half a mile; we travelled up it through a fine bottom, finding it cañon quite often, and breaking out from its rocky prison to run through meadows such as we found at our start this morning; the cañons were all short, and contained narrow strips of grass and meadow land in them; for awhile we left the river, and crossing the spur of a mesa we came to the valley again, here magnificently wide and beautifully covered with grass; the entire bottom could be easily irrigated, if such labor should prove necessary, and the soil which is as rich as any to be found be made to support thousands of families. We encamped near our camping place of the first day out; here we found the Conches fork—one arm bearing off to the northward and westward, and the other nearly due west.

February 13.—Following up the western fork of the Conches, and passing many small cañons, all of which contained water, we turned off, after travelling eight or ten miles, and crossed the divide to the northwestern fork of the Conches; we encamped on the head of this stream at its first springs. The country as heretofore described.

February 14.—Left camp this morning at 9 o'clock, and crossing an easy divide came into the lovely valley of the headwaters of the main Conches; we found it running through a valley probably two miles in width; the valley level, and the course of the stream marked by a line of cotton-wood trees, which occasionally formed groves of considerable size, while the mesas on either side were covered with cedar and pine; leaving behind us the valley and turning to the westward we passed a divide of such easy ascent as to appear a level plain, and passing through a puertocito or gate struck the valley of the Gallinas. From our exploration terminated to-day, there no longer exists a doubt that a line of road may follow the Canadian river and its tributary, the Conchas, from our first crossing near Fort Smith to within fourteen miles of Anton Chico, having a broad level river valley bearing wood, water, and grass in great abundance for its entire length, a distance of six hundred miles.

February 26.—Left Hatch's rancho this morning at ten o'clock. We have passed two months resting our animals there, and found good accommodation. Hatch settled a year or two since on the Gallinas, then an unsettled country, and by the fruitful product of the valley has made himself independent. When we arrived he had already collected some ten thousand bushels of corn, which he was selling at over one dollar a bushel to the government and others. He plants extensively, and buys from his neighbors, also settled on the fertile lands of the Gallinas, and being a shrewd man makes large profits by taking contracts for the delivery of grain or selling it at his house. Passing over an undulating country, with high mesas on our right and an unbounded prospect to our left, came in fifteen miles to the Pecos, where I encamped. In all the country travelled to-day, wood and grass have been abundant—of cedar and pine. We crossed the Pecos at the mouth of a cañon, and some five miles above the Anton Chico. Instead of passing by the latter town we took a new line, by which we saved four miles in distance and found a better road.

February 27.—We were off this morning at seven, and ascending to the mesa from the river by a very short hill of a hundred yards we reached a level country densely covered with cotton and pine woods, and ahead immense tracts of open country covered with grass. Passing over a perfect natural road we encamped at ten o'clock for breakfast after making eight miles. This evening we made nearly twelve miles, through a country which charmed the eye at every step; cedar and pine covered the surface densely, but not so entirely that open glades and quiet little valleys were not abundant. As we advanced, mesas of great height and picturesque appearance rose on both sides of us. At four we encamped in a beautiful valley, and sent our animals up the mesa to drink at a lake of fine water which exists there; near it was a spring in the head of the ravine which drained the valley. We passed this morning several dry lakes, from which the water had just passed; it must be remembered that this is the driest season of the year; the weather delightful.

February 28.—The last day of winter, and all of us are heartily glad of it. We were up at four and off at seven. In a mile or two after leaving camp we came to the entrance of Cañon Blanco, and fol-

lowing out to its head, we stopped to noon where a ravine coming close to the road supplied water. A Mexican with me, who knows the country, says there is a lagune or lake about three miles from us, at the head of the ravine in which we found the water. The country to-day is equally beautiful with that of yesterday. Our road was up the Cañon Blanco. This is a chasm in the mesa, and about a mile in width, its smooth surface offering not a single obstruction to wheels, and so firm that ours left scarcely an impression. On the right the rock rose a sheer precipice in places to the height of five hundred feet; on the left it broke off into steep hills, covered thickly with pine and cedar. It seems inhabited for its whole length by prairie dogs, which kept up an incessant barking as we passed their villages; we killed several of them. To get out of the cañon we ascended a hill, and passing through a country such as described heretofore, encamped at a lake. The whole country, from elevated points, seems like that described yesterday, abounding in timber and grass.

March 1.—Leaving our camp, we traversed an undulating plain, and the day, which had been beautifully clear, turning out stormy, we encamped under a mountain, where a plentiful supply of timber afforded good shelter for ourselves and animals. At noon I visited the Artesian well of Captain Pope. I had previously seen this work, and admire the industry and perseverance with which it is prosecuted. Should the captain succeed, he will have rendered better service to New Mexico than any one alive; and if he does not, he will have the satisfaction of having tested an experiment of great magnitude in the most thorough manner, with a degree of force and spirit deserving all praise. The location is beautifully chosen, and I trust before we return to find a stream of water running down the great valley, at the head of which he is boring, and which requires only that to render it of the most lovely and desirable character. For myself, I have no doubt of his success. We made to-day fifteen miles.

March 2.—It continued to storm on us all night and day. About an inch of snow fell, which, blowing in our faces, rendered our march to-day of great toil. We made sixteen and a quarter miles, and encamped in the San Antonio Pass—the road very good all day—about half of it over rolling plains and the remainder through the pass, which is wide, but shut in by high mountains, covered densely with pine. As far as we have entered it, the pass is easy wagoning.

March 3.—Left camp at noon and went into Albuquerque. Ten miles took us out of the pass, which is an excellent one, and the remainder of the road over a descending grade, very smooth all the way to Albuquerque. Timber becomes scarce after leaving the pass—near Albuquerque there is none. The Delaware and Little Axe killed two deer and some turkeys, which abound in the mountains.

March 8.—From the last date to this day spent in Albuquerque preparing for journey. Left in the evening and encamped for the night in the sand hills. These hills rise gradually for about seven miles, and form the very worst part of the road from Albuquerque to California. The weather warm and pleasant.

March 9.—Leaving our camp in the sand hills, we marched eleven miles to the Puerco; found the Puerco well worthy of its name; it was

running rapidly, and the water and mud mixed in equal parts. This stream requires bridging, as it frequently delays travellers for days; at other times it is entirely dry. The expense of bridging it will be from five to seven thousand dollars.

March 10.—Leaving the Puerco, we came to Sheep springs, which were filled with water, and a small stream issuing from them. The country from last camp rolling and road sandy; grass is scarce at this season, but wood at the springs plenty for fuel. The day exceedingly disagreeable, with a high wind.

March 11.—In seventeen miles, over a road for the most part sandy, we came to the Laguna, which is a large marsh, and abundance of water; encamped near the lake; grass all grazed off; no wood but a few small cedars. Our road to-day has been through a valley, in many places twenty miles in width, and bounded on both sides by mesas.

March 12.—Leaving our camp at the Laguna, we passed over an excellent country up the valley of the Gallo to the Ojo del Gallo. Here we found wood, water, and grass abundant. We encamped near the old camp of last year. The Delaware and Little Axe trapped two beavers, which are quite numerous in the stream below where the road crosses.

March 13.—Remained in camp all day. During the night a slight powdering of snow fell on us. The Delaware and Little Axe caught two more beaver.

March 14 —Camp left the Gallo, and following up the stream a short distance, turned the point of the hills, and bore away for a spring containing abundance of water, but lying three or four miles off the road, to the right. I remained behind, with my negro servant Absalom, to kill ducks, which abound here. We killed some sixty to eighty fine canvas-back, red-head, mallard, and spring-tail, and spent the night at camp. We took no beaver this night, as the Delaware sent his medicine off with the wagons, not knowing we would pass another night on the stream.

March 15.—Leaving the Gallo, our road turns a point of the hills which comes down towards the river, and in about four miles forks. One trail goes off to a spring, and the other directly towards the Zuñi mountain. That which goes to the spring comes in again, a few miles beyond, and loses about four miles. The valley traversed in coming to the Zuñi mountain is sometimes fifteen miles in width, the ascent a gradual inclined plain, so that although a great altitude is attained in the twenty-five miles which intervene between the Gallo and the "Agua Fria," a beautiful spring, which breaks out quite near the summit of the mountain, one does not perceive it, and only the test applied by instruments would convince a person of the fact. The road is excellent, and large, fine timber and cedar exist in the greatest abundance—grass luxuriant. We arrived near the Agua Fria at night. It is the last stream or spring we shall see flowing towards the Atlantic until our return, as the back-bone of the mountain divide of the waters flowing to the Pacific, and those going into the Atlantic, is within a mile of it. The valley traversed to-day

narrows towards the spring, but the hills on either side slope easily towards the centre.

March 16.—We are lying by to work the road at a steep point, near the summit. I rode to the summit this morning, and found it hard to realize that we had reached by so excellent a trail, and without a single hard pull, the dividing ridge of the dreaded Rocky Mountains. The country here, even at this forbidding season, is beautiful, and the forests of pine and abundant grass render it particularly favorable for settlement. I presume, of course, the small stream found here is not the only water in the vicinity. So far, we have found two points which require working, and these done, shall proceed onward. To-morrow I shall despatch two wagons to the Indians at Zuñi, in hope to find corn there, and the Indians in a selling humor. In this respect all Indians are singular. They either sell readily and for little or nothing, or not at all, and are as capricious in their dispositions as possible. We find snow here in patches. Weather pleasant.

March 17.—Still at work at the road near the summit. We are cutting down the rock, making a side cut along the steep ascent, on the four degree grade, and principally on solid sandstone rock, making a wall on the lower side, the stone laid up dry and coming sufficiently above the road to form a parapet. This promises to be both a permanent and excellent piece of road, when completed. Weather pleasant.

March 18.—Still at work on the road. Doctors Floyd and Spiller walked to the summit of a mountain, some distance from camp. They describe the mountain as an extinct crater; the view beyond very extensive, and country covered with a dense forest of pine as far as vision reached. Weather pleasant.

March 19.—Still at work on the road; we shall move back on our tracks to-morrow to work a part some six miles behind us.

March 20.—Went back six or seven miles and worked two bad hills with all the men, and at sundown had completed good roads around them, working hard all day; whipped two of the *most respectable* citizens for an attempt at stealing my sheep; we drive with us two hundred and fifty of these animals for food, which saves the transportation of provisions; the day cold and windy.

March 21.—Left camp and passing the back bone, on the road we had made, came to Inscription Rock; the road heavy with mud, caused by the frost coming out of the ground; having in my previous exploration described the road to Inscription Rock, shall make no further account of it than to say that grass and wood are abundant, and the spring at the rock unfailing and sufficient.

March 22.—Taking Doctors Floyd and Spiller, the Delaware and Little Axe, I started to explore the valley of Inscription Rock. Turning back on our road of yesterday, nearly to the head of the valley, I crossed to the opposite or northern side; following down the north side of the valley, came first to a dry ravine, which, however, has evidently at times much water in it, as the remains of a large Indian encampment proves; going on to the westward close under the mountain, and crossing a sandy piece of ground, for a mile or more, I

found another of similar character, and having old Indian signs about it; beyond this, perhaps two miles, discovered a large spring in a grove of small oak; this spring was about forty feet in diameter, a perfect circumference; good solid ground around, even to the edge of the water, and issuing from it a rill of clear sweet water; the spring is seven feet in depth, a thicket of cotton-wood grows just below it and a long line of red willow, of small growth, marks the course of the rivulet which flows from it; Inscription Rock bears by compass SW. by W., distant about eight miles; between this point and the rock the grass is everywhere abundant and the soil good, but stony in parts; at the spring, where we are at present encamped, are several of great size, one of them of over four feet in diameter, and abundance of small oak; leaving our noon camp and crossing a low sandy ridge, we came into a rich sheltered valley; here, fringed with cotton-wood, we found a sparkling fresh flowing brook; it was of a size which in the eastern States would be called a fine trout stream, and was as lovely a spot as one would desire to see, flowing, as it did, over rocks, and making beautiful little cascades of clear bright water; some enormous pines grow in the bottom and much cedar, with a bark resembling white oak in every respect; the distance from the spring to this stream is about two miles NW. and its bearing from the Inscription NE.; remaining awhile at the stream, we pursued our way along the base of the mountain, and crossing the dry bed of what is evidently at times a large stream, we came at nightfall to another dry bed, where we encamped, defering until to-morrow a search up it for water; in the bed of this stream is found *limestone* in abundance, of a grey color and finest quality; in this stone we found innumerable fossils, some of which we took to camp with us; killed a catamount this evening.

March 23.—This morning we followed up the dry bed, and in a mile or two found abundant running water. In many places the solid limestone made cañons of twelve to twenty feet in height. Returning at ten, we raised camp and pursued our journey, still keeping the northern side of the valley and the base of the mountain, which is densely covered with pine of largest size, and the valley rapidly becoming green in grass. Leaving camp and pursuing the same course, at the foot of the mountains, about northwest, we came in a mile upon another fine stream, larger than the first. This was fringed, like the other, with cotton-wood and oak, and in a grove of giant pines, on a little mound, we encamped for noon, Inscription Rock bearing about S. by E. The bottom lands, as well as the hill sides, are of the richest quality of soil. Following down the stream after nooning, we saw on the opposite bank the ruins of an ancient building, which we crossed to examine. We found it larger and more perfect than those on the summit of Inscription Rock. The wall remaining was about ten feet in height, built of stone, all of the same size, and regularly laid. Opposite, in strange contrast with its massive appearance, were some deserted huts, built of mud and twigs, the houses of the present inhabitants of this country. It was ancient and modern Greece. Leaving the stream and pursuing our course, and passing over a soil of incomparable richness, we came at sundown, after travelling about four miles, to another brisk running stream, on which we

encamped in large pines at the foot of the mountain. This stream was fringed with small willow, but no cotton-wood on its banks. Inscription Rock bears about S.SE. I killed another catamount this evening.

March 24.—This morning, breakfast on wild-cat being over, we started to explore the creek to its head. We found much rich copper ore on its banks. About a mile above our camp several rich and pretty pieces of malachite were found. Following up the mountain, we came to a grove of quaking aspen. Above this the stream flowed, almost to its head, over a broad flat rock, which seemed as though it might be the very backbone of the world. We found the stream had three forks. Two we explored to their heads. Both issued out from under the rocks near the summit of the mountain. The right hand fork is the largest, and bursts out of the mountain side a full grown brook, and goes on its way making cascades over the rocks, rushing and sparkling through crevices in fine style. In ascending these forks we found several spots where cat-tail was growing luxuriantly, and which gave unmistakable evidence of living water. The view from the summit was of the grandest description. We found the mountain covered to the summit with lofty pines, and but little snow, scarcely any upon it. Leaving this camp and travelling about five miles, still along the foot of the mountain and over the richest description of soil, we arrived at the largest stream we had yet seen. It would be impossible to do justice to the view from our present camp. Guided by the roar of the water, we followed up the stream a hundred or two yards above our camp, and there found it issuing from the mountain, roaring and boiling, and struggling among the rocks of the cañon. Looking up toward the mountain, up the bed of the stream, nothing could be wilder or more savage. The powerful stream pent up in the narrow, solid rocks, seemed in torture to get free, and was twisted and turned from its arrow-like career at every inch by the rocks which stubbornly opposed it. At times it broke with tremendous bounds in cascades, and at others formed deep whirls and pools of foam, always violent, restless and noisy; the steep sides of the mountain, even to the verge of the cañon, and where there was room within it uncovered with pine, and on all sides, huge rocks and broken trees, with occasional patches of snow. Turning from this scene of savage grandeur, just below and stretching for miles was a quiet, smiling, abundantly fertile valley, through the centre of which the fierce stream above flowed as peacefully as though its waters had never been vexed and tortured by the rocky walls of a cañon. On the opposite side, about five miles off, a high mesa of red and white sandstone rose perpendicularly, its summit and its base covered with cedar. Altogether it was such a scene as, in all my wanderings, I have never looked upon before. This stream cuts directly across the valley we have been traversing, and enters a cañon on the opposite side. The whole valley through which it flows is as fertile as it is possible for land to become, and timber everywhere abundant. Its course is nearly north and south. Here, also, we found, in a hill on the side of which we encamped, and quite near to where the river comes out

of the cañon, rich copper ore. From this point Inscription Rock bears about SE. by S., and distant some eighteen miles.

The climate of this region is most unexceptionable; the days warm, the air pure, the nights cool, without being too cold. The stream is of the size of the Pecos at San Miguel or Anton Chico. Above our camp, some three hundred yards within the cañon, is a natural bridge, over which part of the stream flows in spray, the main body of it passing beneath. It is of wonderful beauty. Above, as far as we explored the stream, it formed a succession of exquisite cascades all the way.

March 25.—To day I return to camp, my duties requiring my presence there; I shall cross to the opposite side of the valley, and return by it to Inscription Rock; my exploration has been every way most satisfactory, disclosing, as it has, a country rich in everything that makes the habitation of man prosperous and happy; to New Mexico it is of incalculable importance, and I trust to live to see my labors of the last few days rendered useful by the enterprise of our people, and some day to find flourishing settlements and prosperous communities where our footsteps have trodden, in what is now a wilderness, only known to the wretched Indians who now inhabit it; when I left camp this morning it was my intention to have returned home to the Inscription Rock, but the valley looked so beautiful to the northward that I determined to go to its head; following it up through the same beautiful scenery, we came to the head in about six miles, in a noble pine grove; looking beyond it seemed to droop by rapid descent into a similar country, which I felt every desire to explore, but the want of time prevented; at the head of the valley, about a half a mile, looking towards the north, I found another small spring up a cañon, and near it we stopped to noon and graze our animals on the fine green grass, here from four to six inches high; after nooning we crossed to the opposite side of the valley, and turned homeward under the high bluffs which bound its western extremity; the base and sides of these bluffs, and wherever a foothold is afforded, are covered with cedar and pine, and in places the rock is cut into the most fantastic shapes by the action of the water; travelling along the slopes, and sometimes in the valley bottom, we found the two first streams described to unite and form a large lake of about a mile in circumference; this found its outlet through a cañon, leading towards the Ojo Pescado and Zuñi rivers; where the last-discovered stream empties I cannot conjecture, but think it probable it finds its way underground after, leaving the valley, to the Rio Colorado Chiquito, or perhaps sinks altogether in the intervening sands; keeping our course towards camp, we reached it at nightfall, and immediately prepared for a start in the morning.

March 26.—We left El Moro, Inscription Rock, early, and travelling over our old road, which we found excellent, and well timbered and grassed, the surface being nearly level, and without a hard pull, we nooned at the beautiful spring of the Ojo Pescado; we crossed the Zuñi river before coming to and after leaving this spring, a mile on either side of it; the river was full and running rapidly; it was about twenty-five feet in width and three in depth; it is sometimes quite

dry where we crossed it, though water is always to be found in it below; after nooning we travelled on to within ten miles of Zuñi, where we encamped, near the river, in good grass and wood plenty. Going towards Zuñi it is always well to encamp at a distance of ten miles or so from the town, as nearer one does not find good grass or wood, the Indian sheep and ponies requiring it nearly all, besides which, most of the valley is cultivated in corn and wheat.

March 27.—We entered Zuñi to-day. We had a wagon, under charge of Mr. George Beale, three days in advance, trading with the Indians for corn, and having obtained a sufficiency, we moved on about six or seven miles from town to a good camp in the cedars, and about half a mile from the river. The day was very disagreeable, with a high wind blowing the dust in every direction, reminding us of Washington City in a winter gale. Before reaching the town about two miles we crossed the Zuñi river for the last time, and already beginning to lose a large portion of its waters in the loose soil of the valley. The old governor met me in the town with many compliments and congratulations, and bearing in his arms a box containing my "artificial horizon," which I had left with him in passing last winter. He told me the charge had been a great burden on his mind, and he was glad to be rid of the responsibility; rewarding him with several blankets and numerous pieces of calico, I sat down in his house to hear the news. He had a long list of grievances. The United States had persuaded him into an alliance with the troops as auxiliaries in the late war with the Navajoes; his people had fought with our troops side by side like brothers; the United States had found it convenient to make peace with their enemies, and had left their auxiliaries the prey of their powerful and numerous foes. I told him I thought it served him right for meddling in things which did not concern him, and warned him for the future to avoid "all entangling alliances." I left town after giving some things to the Indians and trading for some corn meal, and through the dust, which was almost blinding, we rode to camp.

March 28.—The day being still very unpleasant, with a high wind and occasional drifting fall of snow and hail, we did not leave camp, which was well sheltered by the cedars in which I had placed it.

March 29.—Leaving camp early and marching about twenty-five miles over a country already described in my previous journey, we reached Jacob's well. The day cold and raw, with a most unpleasantly strong west wind right in our faces; there is no wood at the well, but a quarter to half a mile abundance, and grass plenty. The road for the day has been through a cedar forest and prairie country well grassed.

March 30.—Worked hard all to-day with fifty men on the road at a place mentioned in my last year's journal, where the prairie dipped suddenly, making an ugly hill; by night we had completed an excellent road by a side cut from the summit to the plain.

March 31.—Left Jacob's well, and travelling ten miles came to Navajo springs. These springs I have before described; they break out on the flat plains, and travellers should be most particularly cautious not to approach them in the night, as there are places where a

man or beast falling into the mud springs, as they are called, and which are found near the water, would be entirely lost. I myself stepped incautiously too near, and though on the brink sank instantly to my waist, and but for being so near the brink would have gone out of sight as quietly as in water. Emigrants approaching them should place a guard at each to keep stock from getting in, as the ground to the very edge of the quagmire is firm, and one step would occasion the loss of man or beast. There is no wood at the springs, but plenty a mile east, and good grass. Leaving the springs we encamped on a small creek, with water in holes sufficient. The line of the creek is marked with scattering cotton-wood; cedars found on the hills to the left near where the road crosses it, and grass is abundant. I found this stream running full last spring, and the drift-wood in the bottoms shows it at times to get up a famous current. I have called this stream Long's river, after one of my party, E. P. Long.

April 1.—Leaving our last camp we passed a rough day in getting to the Zuñi. The road was good over our old trail of last year, but the weather abominable; the wind was high, and every half hour a squall of mingled snow and hail directly in our faces. The sun had risen clear, and we had congratulated each other on the prospect of a fine day, but in half an hour, as if to make April fools of us, and keep up the proverbial reputation of the season, the face of things changed, and a more unpleasant day I have not passed on the journey. The evening was, however, calm, and we found an excellent camp, the only good or even tolerable one for wood on the river, in a little ravine which comes in about a quarter of a mile below where the road crosses to it. About nine miles before reaching this stream the road crosses and follows down the right bank of another large sandy bed of a stream, which sometimes runs full, and at others is dry, but water may be had by digging at any time at the point indicated in my last year's journal; at this time it was above ground, and we watered all our stock at it. At our camp this evening we dug about a foot, and found plenty of water, which I presume may be done at all times when there is not found running water in the stream, and there exists necessity for it.

April 2.—Started at seven, and travelling twenty miles reached a good camp on the Little Colorado, about two miles below where we first struck it. In following down the Zuñi one finds off to the left a few scattering cotton-wood about a mile. I think we are on the same stream on which we encamped night before last, and which comes into the Zuñi, making a broad sandy stream, about six miles below where we encamped on the latter. The weather cool and almost cold. I had sent the Delaware and Little Axe ahead a day, and on our arrival here found they had taken four fine beavers, one of which was the largest I have ever seen. Contrary to my former experience of this stream, and adding greatly to our comfort, I found it quite clear, though much lower than I have ever seen it previously. I changed the location of the road where it comes to the river. I had made our first road around a projecting point of hills, which obliged one to leave the bottom and follow for some distance the sandy bed of a creek, which I supposed at the time never would afford an obstacle, but returning last winter I found it too deep to cross even with packs. I

carried the road to-day around close under the hills, avoiding entirely the creek, and found the travelling excellent, excepting at a small ravine, which was steep and deep; this I bridged by filling it with rock laid up loose, so as to offer but little resistance to the drainage of water.

April 3.—Remained in camp all day. We drew our seine in the river, but caught only one fish. Some of our party took a few with hook and line. They were fat in appearance, with fine white, silvery sides.

April 4.—Left camp at half past six o'clock, and travelled down the river twelve miles, working the road in many places. Little Axe took a beaver, and the Delaware killed a porcupine. I find gypsum abundant in the hill sides which bound the broad meadow bottoms of the river. San Francisco, with its frosty head, in sight this morning, also the Rabbit Hills to the north. These are curious looking points, of considerable height, which seem to run almost straight up out of the plain north of us.

April 5.—Up at four and off at six o'clock. Still down the river travelling slowly and working on the road where it requires it. We find antelope and deer abundant, but shy. Little Axe took a beaver. The grass, though still dry, is as plentiful as possible, and wood everywhere. We find amongst the drift logs on the river banks large pieces of black walnut and pine; and it is to the region from whence these come I purpose following the river on my return.

April 6.—The camp, under charge of Mr. George Beale, moving slowly down the river to the opposite side. Here we found a curious stream flowing into the Colorado Chiquito from the south. It was a swift-flowing brook of clear water, about half-leg deep, and one might approach its banks within a few feet through the thick-growing grease wood without discovering its waters. Just above where we struck it the appearance of the stream was that of a regularly constructed canal. Here it was about twenty-five yards in width and some six or eight feet in depth. We found otter and beaver sign in every foot of its banks. Ascending it a few miles, I found it to cañon, and five or six miles further towards its source it presented a curious spectacle. Approaching the edge of the chasm, it made our heads dizzy to look at the stream below. It was a sheer precipice of a hundred yards in depth, and at the bottom the water whirling through with the greatest rapidity. As far as we could see this cañon extended, getting higher and deeper, until it reached the edge of a ridge through which the stream had cut its passage. Yet it must come from a valley country beyond this ridge, as we saw much beaver-cut wood among the drift brought down by its current, and the cañon has none, nor is there any of any description upon the banks of the stream as far as we could trace it above. The Delaware and Little Axe took two beaver.

April 7.—This morning we scratched in a hill side, on the summit of which were the remains of an old Indian pueblo of the race who once inhabited this region, but who have passed away without leaving a single clue as to their people or times. We exhumed a much decayed skeleton, the bones of which were too much decomposed to bear handling; on the forehead was a small earthenware vase, and one on

each side of the body; these we took out carefully, and I hope will be able to carry them back with us. I also found several arrow heads of agate prettily worked. The Delaware and Little Axe took two beaver. Leaving the river I overtook camp, and was pleased to find that Mr. George Beale had discovered an excellent rock ford, a most valuable matter on this river, where crossing is frequently rendered difficult on account of the muddy character of its banks, besides giving a fine foundation for a bridge, when one is built; it is the only rock bottom yet discovered on the river; the bank on the opposite side had been worked down, and an excellent road made up it, and the whole train crossed by Mr. Beale before we arrived; almost as soon as we got to camp the mules were hitched up and we were off. I have stated in my previous journal that the road here leaves the river for a time, say thirty-five miles, to cut off a bend which the stream makes to the northward. We travelled twelve miles and encamped for the night, where an old road ascends a steep mesa.

April 8.—We were up early, and looking for a more favorable place to ascend the mesa and make a good road, discovered a spring; it seemed almost too much good fortune, and was just in the place where I should have put one if it had been in my power, making, as it does, the easiest of drives across the cut-off, and obviating the only objection to leaving the river. We went hard at work at the rough side of the mesa to make a road up it—an uglier place is hard to imagine—huge boulders lay on its steep sides in every direction; but with fifty willing hands a good deal may be done; worked all day. The Delaware and Little Axe took two beaver.

April 9.—All day hard at work on the road up the mesa. I have had the spring cleaned out, and a fine basin of considerable size made to receive its waters, which are excellent. The Delaware and Little Axe took two beaver.

April 10.—Worked hard this morning at the descent of the mesa, and having crossed it travelled down the river to the point, at which we shall leave it; road excellent.

April 11.—The day windy and disagreeable; worked off the steep pitch at the mouth of Cañon Diablo and travelled fifteen miles to Walnut creek, in which we found abundance of water in holes and large pools. Shortly after our arrival at camp the water came down in a full stream, filling the whole bed of the creek, and making a stream some thirty or forty yards in width and two or three feet in depth; we have abundance of drift wood and a fringe of small timber growing on the creek, walnut and hackberry. This morning I went off the trail some miles and struck the Cañon Diablo; it is appropriately named, being a chasm in the earth, with perpendicular rock sides, in places a hundred and fifty feet in depth; the bottom is well supplied with black walnut, cotton-wood and hackberry, and we could see, looking down into it, larger pools of water, which in rainy seasons would become torrents; but for this cañon the road could be shortened to the Colorado Chiquito twenty-five miles; it might be easily bridged, as the rock affords every facility for solid foundations on both sides.

April 12.—We are now at the foot of the San Francisco mountain, and a light snow is falling, which melts almost as rapidly as it falls.

Travelled seven miles and encamped in some cedars by the road side. We are glad once more to see the green grass; at Walnut creek it was quite green, and seems to improve as we advance.

April 13.—Leaving last night's camp we travalled to Cosnino Caves and stopped to noon; at this place we found, as at Walnut creek, a booming stream of water filling the whole bed of the creek; after nooning came on about seven miles further, and encamped at a steep pull out of a hollow, with the view of working it in the morning; Little Axe killed an antelope.

April 14.—Worked hard all day until evening at the road, removing large rocks and grading it; in the evening we drove on some six miles, ascending a rocky mesa, which I also worked, changing the location of the road at this point to an ascent offering a better grade; we found the water-holes in the valley which we dug last year full, affording us an abundant supply for our camp and animals; the Delaware killed an antelope.

April 15.—Worked the road in places, and travelling seven miles arrived at Le Roux spring, the weather delightful; no one could pass through this country without being struck with its picturesque and beautiful scenery, its rich soil, and its noble forests of timber; the view from our camp of this morning is unsurpassed in the world; the soil is a rich black loam, the grass, gramma and bunch equally mixed, and the timber, pine of the finest quality and greatest size; water at this season we find everywhere, nor is there at any time any lack of it at this place.

April 16.—Leaving Le Roux spring we travelled four miles, and encamped in the forest, where the green grass afforded abundant pasturage; the road in places heavy with mud.

April 17.—Passing out of the forest in a mile and a half we came to a beautiful prairie some five miles in breadth and three times that in length; at the western extremity of this prairie, and within a few hundred yards of the road to the right is a spring; as it is not large, I determined to improve it, and therefore camped for the day and put all the hands to work to dig it out; it will then supply abundant water for parties of any number; the prairie is surrounded with pine timber, and many beautiful groves growing within it; numbers of deer and antelope bounding over its green turf make it peculiarly attractive, while the magnificent San Francisco mountain, capped with eternal snow, renders the landscape perfect; the Delaware killed an antelope.

April 18.—While we were busily engaged in digging out a large basin at the spring this forenoon, I heard exclamations of surprise from the men, and looking down the valley saw two men approaching rapidly on dromedaries; I recognized at once the white Egyptian dromedary, my old friend of last year; as they came nearer I saw that one of the men was S. A. Bishop, esq., and the other Ali Hadji, who accompanied me on my former expedition; they had glorious news to tell me; I had sent my clerk, F. C. Kerlin, by El Paso, to California, to say that I should take only provisions to last me to the Colorado, and expecting Colonel Hoffman with the troops would be there to pack my camels with provisions and meet me at my crossing

of that river; Colonel Hoffman had gone to the river to reconnoitre, but the Indians having attacked him he returned to the settlements for reinforcements; Mr. Bishop knowing I would be at the river about the time set, and that Colonel Hoffman with his seven hundred troops could not get there in time to meet me, as they intended to travel to Beale's crossing *via* Fort Gaines, fitted out an expedition of forty men, and boldly came on to the river; here he was met by a thousand warriors flushed with their successes over the emigrants, and rendered confident by their skirmish with the troops; they immediately attacked him, but did not calculate on the character of the men he had, or the deadly efficiency of the frontier rifles in the hands of frontier men; he killed two out of every three aimed at, and, in a brilliant battle, completely routed them; he then crossed the river and remained in their village for a number of days defying them; then so completely was the spirit of this formidable tribe broken, that he divided his party, sending back twenty, leaving a strong garrison of six at the river, and with the remainder came on to meet me. On the second day after leaving the river he was again attacked by two hundred choice warriors, anxious to wipe out the disgrace of their late defeat. These, with his small party, many of whom were beardless boys, but *frontiersmen*, he routed, killing four at the first fire. As he approached the river, four men of the mail party, which has been making fruitless attempts for nearly a year to get a mail over the road, joined him, but on seeing the number of the Indians their hearts failed them, and two turned back. The mail was brought on my camels and delivered to the agent, Mr. Smith, who was travelling with my party; and having no means of sending back the mail he brought, and as the camels after meeting me turned back to the Colorado, it was transferred to the back of one of them, and now returns with us. Thus the first mail of the 35th parallel was brought on my camels both ways, and never would have come until the establishment of a post, as the men who accompany it affirm, but for Bishop coming under my direction to meet me. In the evening we hitched up and came over to Bear spring, about four miles further on. This is a fine locality for emigrants to lay by and recruit their stock, as there are several fine springs within a mile or two around the base of the mountain which afford abundance of water; and the grass cannot be surpassed, and the forest filled with game in plenty. Little Axe killed two antelope, and the Delaware a deer.

April 19.—Leaving Bear spring we came to Cedar creek in eight miles, where we found plenty of water in the same large pool in which we found it in our first journey of exploration. Here we remained three hours and a half, and then coming ten miles further, stopped for the night near King's creek. The Delaware killed an antelope.

April 20.—We came in three miles and a little over to King's creek, where we found a pool of water of some hundred yards length by fifteen in width, and about four feet deep. Our camels with their solemn faces make our camp look like old times again. The Delaware and Little Axe killed two antelope. Leaving King's creek, and travelling eighteen miles, we encamped without water, but in good green grass; cedar and pine abundant. The whole location of this road I

shall change, carrying it by my trail of winter before last. By this means I shall save twenty miles in distance, gain two waters, and pass over ground equally as good as that now travelled, which, however, is excellent; but the saving in distance and the gain of two waters warrant the change.

April 21.—Leaving last night's camp, we found water near where the road ascends a short mesa. But being near, we came on to Alexander's cañon, and found water and grass in such abundance that our mules soon filled themselves. It is forty miles by the present road to our noon camp, on King's creek, of yesterday. By the cut-off and new road I shall save exactly half of that distance. On account of these contemplated changes in its location, I shall defer making it until I replenish my provisions and corn. A slight shower of rain this morning. The Delaware and Little Axe killed each an antelope. In this record of game killed, I only mention that killed by those two, who are regularly employed as hunters, and none taken by the rest of the party.

April 22.—We left Alexander's cañon at four this morning, and arrived at Hawley's cañon at eight o'clock. Here we found the water, as on my two previous journeys, abundant. I desire to say particularly of this water, or rather of these waters, that they are not springs, but large tanks in the rocky bed of the cañon, containing a great deal of water. There are three of these tanks, two of which are directly at the camping-ground, and the other nearly two hundred yards below. Going westward a mile and a half before reaching this place, one sees to the left, about a quarter of a mile from the road, a ravine or cañon; about a hundred yards down this is a hole we dug out on my first journey, and which I found full of water this morning; following down the cañon a hundred yards further is a spring; about the same distance further down, a small ravine comes into the cañon, and by going into this some fifteen or twenty yards is another pool of water. Some mile and a half or two miles after leaving this camp, (Hawley's cañon,) to the right, is a spring and tank of water; also, to the left of the road a quarter of a mile, and about four miles from here, is a large pool of water, which I think is spring water, and is, to the best of my belief, in the same cañon as Smith's spring, and the same water. In travelling this road with stock, one would do well to lay in here a supply of water, as it is thirty-five miles from the last-mentioned water to the next. The grass and wood in this region is everywhere excellent. The wood is principally cedar and pine, and in forests of great extent, but with open glades, which divide with the woodland the whole surface of the country. Little Axe killed an antelope. Leaving Hawley's cañon, at which we stopped to noon, came on to Dornan's Pass, described in my previous journey, where we passed the night. The Delaware killed, to-day, the first big-horn or mountain sheep we have seen on the road. It must have weighed, when dressed, a hundred and fifty-five pounds.

April 23.—Travelling through the level valley described in the former expedition, with the Aztec range on our right, we came, at dusk, to our old camp at the water holes in the rock. These generally contain several barrels of water, but the camels and loose stock which

I had sent on to Hemphill's springs had exhausted nearly all the water. I shall shorten the road from this point to Floyd's Peak on my return, by carrying it through Tucker's Pass, which I discovered on the previous journey, by one-third of the distance.

April 24.—We left our camp before daybreak, and, descending the rocky hill, struck the level valley leading to White Rock spring and Truxton's springs. To my infinite satisfaction, we discovered two springs this morning, neither of which are a half mile from the road, and both having abundant water. This discovery renders the road from Albuquerque without a single (jornada.) There is now no place on it, when the new road is made, which will make it necessary to travel over five and twenty miles without water. I regard the discoveries of this morning as fixing beyond doubt the fact that this is the best emigrant road known from the eastern States to the Pacific ocean. The first spring I have called Delaware spring, because the Delaware found it. It is in a cañon to the left of the road, about a third of a mile distant, and about two miles and a half onward after descending the rocky hill into the valley. The second I have called Gardiner's spring, after the man who showed it to me. This, also, is on the left of the road, and about a mile and a half further on than the Delaware spring. They are both of the purest water and refreshingly cold. In addition to this, we have discovered a short and easy road to Hemphill springs, which is quite a stream; by the newly discovered road one turns off after passing the springs just mentioned, and, going due west two miles and a half, reaches the water without encountering any difficulty. Thus a cluster of springs of excellent water are found at the very point which we have always considered the least well watered, and on that account the most objectionable on the whole road. Indians seem numerous about here, and we are keeping a bright look-out for them. To-day their signal fires are telegraphing our arrival from every hill-top. It was here we killed two on our homeward journey winter before last.

April 25.—Leaving White Rock spring, which is in Eagle's Pass, we came to Truxton's spring, discovered in our previous expedition, in a mile and a half. Here we breakfasted, and grazed our mules until noon, when we came on nine miles further and encamped. On our way down, just as one comes out of the pass and turns to the westward, I saw a green spot on the mountain opposite, and Mr. Bishop informed me that it was, he supposed, the spring which one of his hunters had found and spoken to him of a few days previous. I sent over some men to examine, who reported on their return that it was an abundant spring of the largest kind. It is about a mile, or perhaps a little more, from the road, and not over six or seven from Truxton spring. The bearing from the mouth of the pass is nearly west to the spring, to which a well marked Indian trail leads. We are beginning to believe that this part of the road will prove the best instead of the worst.

April 26.—Leaving our last night's camp, I determined to make a cut-off in the road to Vias spring, which is on the mountain side, as our provisions are getting low. I made only a passable road, and reached the spring at evening. All day was passed in hard work

upon the road. We found the spring improved by the working out of the rocks, which we did last year. At Truxton's spring the Indians succeeded in stealing a mule from us.

April 27.—Spent the day in working out the rocks in the spring, and cutting the road close to it. The old road did not come within from three to five miles of it. The new one, which was hurriedly made, for the reasons given in yesterday's remarks, approaches it within two or three hundred yards. In the evening we got up our teams and drove some eight or ten miles.

April 28.—Leaving our last night's camp we came twelve miles to Saavedras spring, near the mouth of the Boy Pass; here we found the water abundant, but grass scarce. About three miles before we got here, and about a mile after entering the Bog Pass, I went off with Mr Bishop to the right, some two miles, to look at some springs which he had discovered when coming to meet me. They are fine springs, and well filled with water; here any amount of stock could be watered. I only visited two of the three discovered by him, but he informed me there was another a mile or two beyond in the same line; the road to these springs from our road is not difficult, and I drove my small instrument wagon to it. I am contemplating a change in the location of the road, so as to pass these fine waters, which are important discoveries. We are now within twenty miles of the foot of the Colorado mountains, which are plainly visible as one comes down the cañon to this spring, and consequently only forty miles from the river. This morning the Indians stole one of our mules and shot another, so that it died in half an hour, which belonged to the two mail men who are travelling under my escort, the mail being carried on our camels. When I met Mr. Bishop he had brought it on the camels from California, and at the request of the road agent I am now taking it back by the same conveyance, having informed me that he had no means at his disposal to carry it back. The camels have done good service on the thirty-fifth parallel road. We picked up an arrow which had been evidently shot at Mr. Carrington, who was on horse guard at the time, but struck a rock before reaching its intended victim. It will be curious if I do not find some way of circumventing these fellows before morning. The mule was stolen and the arrow shot in broad daylight and about noon.

April 29.—We arrived early this evening at the springs at the Colorado mountain, where we found the water very plentiful. We played off a very good joke on the Indians last evening, which brought up our accounts quite square with them; about sun down after they had killed the mule and stolen the one mentioned yesterday, I caused the mules to be hitched up, and camp made ready in as much apparent confusion as possible, knowing the devils were watching every movement we made, it was so managed that we got off at night, so that they could not see the men we left behind concealed in the rocks, after going a few miles as if we had been frightened off, and were moving to seek more open ground, we encamped and built our fires; all this must have amused Mr. Indian vastly, and doubtless he chuckled hugely how they had frightened us; the men left lay in the rocks until daylight, when, just as we had expected, our red brothers

came down to see the mule they had killed, and what damage beside they had done us, when our party fell upon them and killed four, returning to camp before it was ready to start in the morning, bringing bows, arrows, and scalps as vouchers; it was a good practical joke—a merrie jeste of ye white man and ye Indian.

April 30.—Went to the summit of the mountain, and to the base on the other side, to look at the road. We saw the river very plainly, but could see nothing of the troops, and so shall make our preparations to go down and give the Mohaves a turn in the morning, for which the men are busy preparing their arms. To-day we have discovered a cluster of five springs lying to the left of the road from this camp, which is at the first springs before reaching the mountains. They are reached by a rocky trail, and have a great deal more grass than this one, or the one a mile ahead. The cañon in which they are is plainly visible as one comes to this spring, and it is only a quarter to half a mile from here. In addition to these springs, we found two others: one a half mile or so up the creek in which this spring is situated, and another near the foot of the mountain. Camp has not been moved to-day; and when I say we crossed the mountain, it must be understood that we only went over exploring and to look out. Preparing for a descent on the Mohaves; all hands getting ready their arms. I shall take with me thirty-five men and three days' provisions on three camels. The men will go on foot, so that we shall not be encumbered with mules to guard while we are fighting; as for the camels, they will pack our provisions and require no guarding, as they will feed well tied up to a bush.

May 1.—Left camp early with thirty-five men, all on foot, and in fighting trim, with nothing to carry but their rifles, knives, and revolvers, the camels, packed with provisions, following close behind us. We marched the twenty-five miles in six hours. On our arrival at the river we saw some Indians, and the men, as soon as they had drunk, started out to get a shot. Whilst they were hunting them through the thick undergrowth which fills the bottom, and about three hours after we arrived, we were surprised at seeing three or four white men coming up the trail. These informed us that the troops were encamped in a bend of the river a few miles below, and that Colonel Hoffman had made a treaty with the Indians; so that we immediately called in our men, much to their disappointment and intense disgust. Here I heard that our caches of provisions had been raised by the soldiers, so that I would be obliged to go into the settlements for more. Major Armistead is at present in command of the troops.

May 2.—Sent back to the mountains for the remainder of my party, which will come on here and await my return with the provisions.

May 3.—Preparing for a start. The remainder of our party from the other side of the mountains came in.

May 4.—Moved down to Major Armistead's camp, and in the evening swam our mules over the river, and started for the settlements for provisions.

June 26.—Arrived at the river and encamped, having been absent

since the fourth of May, busy in procuring and packing out provisions for my camp.

June 27.—Commenced crossing our packs and provisions; the river very high, and nearly a quarter of a mile in width, with a rapid current.

June 28.—Completed our crossing. I found our camp in good order and health. Major Armistead had been kind enough to keep them supplied with provisions until my return, which places us all under many obligations to him. The Delaware and Little Axe have taken in my absence thirty-two beavers and killed two black-tailed deers.

June 29.—Left the river and crossed to the opposite side of the mountains with our wagons. Two months' work has made a vast change on the road over the mountain; an ordinary six-mule team may now easily go through John Howell's Pass, hauling thirty-five hundred. Springs have been found also between the river and the mountain, which makes it an easy day's journey. We encamped at our old ground, under Frank Murray's Peak.

June 30.—At the springs on the eastern side of the mountain, making our preparations for a start.

July 1.—Spent in refitting wagons, shoeing mules, &c.

July 2.—Got under headway this evening, and reached Saavedras spring at daylight.

July 3.—Saavedras spring contained sufficient water, but being anxious to alter the line of the road to Bishop's spring, we only watered our animals and turned them loose for a while, and then came on. About a mile from Saavedras spring we left our old road in the first cañon, which comes in on the left hand as one travels towards the east. Following this up three miles over an easy road, we came to Bishop's springs. These two fine waters are about four or five hundred yards apart, and are inexhaustible. This evening a heavy fall of rain, accompanied with much thunder and lightning; it lasted from six until ten o'clock at night, raining in torrents continuously. At Saavedras spring we found that the Indians had burned the dead bodies of their friends slain by our party as we went in; their bones still remained in pieces on the ground. Mr. Bishop and myself, out exploring this evening, found a running stream of pure and excellent water near camp, which I called Armistead's creek, after Major Armistead, of the United States army.

July 4.—Finished working in the vicinity of Bishop's springs, and moved over to the creek discovered yesterday. It is thickly lined with willow, cane, and grapevines, and a fine little growth of hackberry. A heavy shower of rain; the weather cool, but pleasant.

July 5.—Leaving Armistead's creek, we came by a beautiful pass, over a small ridge of inconsiderable height, to the great valley, through which our road passes, to Vias spring, which is now frequently called Indian spring. As we crossed the divide to get into this valley, Harry Edward's mountain lay directly in front of us, and its lofty summit, covered with great pines, induced me to send a party off, under Mr. Carrington, to examine it. He did so, and reports a fine running water and beautiful country around the part examined. I have called the spring after its discoverer, Carrington's spring. We

are encamped for the night in the valley, at the Dry creek, which runs through its centre, and found here, as all over the plain, green and abundant grass. A fine shower of rain.

July 6.—Reached Vias spring early in the forenoon, and found plenty of water. We have now with us nearly two hundred animals, and yet we did not exhaust the water or diminish it so much but that it speedily refilled the basin of the spring. In the evening we travelled some eight miles, and encamped near Gabriel's springs. It rained on us most of the evening.

July 7.—We passed Gabriel's springs, leaving them a half mile to our right; it affords quite as much water as Vias or Indian spring, and has hackberry and locust shading it, making it one of the prettiest camps on the road. I here changed the location of the road, and instead of crossing the Dry creek, at the old point, I kept on the side on which the spring lies, and exchanged a hilly road for a fine, smooth one, and crossed the Dry creek, opposite Engle's Pass, in which Truxton's and White Rock springs are found. Gabriel's spring lies up the ravine, which comes into the Dry creek just where the road makes the bend, in following up Dry creek. We nooned at Truxton's spring, which is inexhaustible, and then following up through Engle's Pass, by White Rock spring, (running water,) encamped at the entrance of the pass, at some holes of water, which, however, are not permanent, though full at this time. It rained hard on us all night.

July 8.—Getting out of our wet blankets, we came on to Gardner's spring with the train. It has rained all day long. I have spent the day exploring a road for wagons into Hemphill's springs, which are a group of springs, forming a small creek. We have been perfectly successful in finding both an outlet and an inlet to them, by which the heaviest loaded wagons may pass with perfect ease. I had with me two four-mule wagons, with their usual loads, and passed in and out without stopping for an instant to open the road, and without either a steep ascent or descent. The Delaware killed a deer.

July 9.—Spent the day in looking for a way to avoid a rocky hill over which the old road lay. Explored a pleasant valley, by which we not only regain the old road and avoid the hill, but save three or four miles in distance. Fresh Indian signs to-day. The Delaware killed a black-tailed deer. Sent the mules over the road explored yesterday, to Hemphill's springs, three miles off, there being an insufficiency of water for so many animals. Little Axe killed a black-tailed deer. Our men ran off some Indians, and returned with many trophies, but no *hair*. Amongst the affairs left by the Indians was a large piece of red chalk, (keel,) of which they appeared to possess plenty, and an awl, made of a part of a pair of scissors, most probably taken from the emigrants at the time of their massacre on the river.

July 10.—Going out through the pass discovered yesterday, we came to camp about ten o'clock at night, in the great valley which is entered from the east by Dornin's Pass.

July 11.—Leaving the train to pursue the road, I turned off and came through Tucker's Pass into the valley, at the head of which is Floyd's Peak. We passed over a beautiful country covered with cedar in large patches, sometimes in extent, and intersected in the valley

with numerous ravines, in every one of which we found water, but, I presume, it was only that left by the late rains, though in places it had collected in pools in very considerable quantities. The grass everywhere excellent. The Delaware killed an antelope.

July 12.—We moved up to Hawley's cañon and found plenty of water; this cañon lies about four miles westward of Floyd's Peak. The Delaware killed an antelope.

July 13.—Yesterday some of the Mexican herders came in to say they had discovered a large tank of water, with water running into it. I examined it to-day, and found it six feet deep and twenty in diameter, with a small thread of water running into it; the walls on all sides but one were perpendicular, and about twenty-five feet in height; on the remaining side was an opening into the cañon, affording easy access for animals to the water. I have called the pool Kerlin's well. I should say any amount of cattle might water at it, and for a recruiting point for emigrants it is a most desirable place, as the grass is very abundant and excellent. I regard this as so important that I have here altered the location of the road so as to pass just by it. Going on a mile or so further, we found another valley containing water in holes all the way down it, but I take it to be rain water, while that at Kerlin's well I regard as permanent. I found growing in the valley of the well some fine mint. I had brought but one bottle of brandy with us, intending to keep it for fear of a rattlesnake bite, but the temptation was too strong; so, gathering a handful or two of the mint, we returned to camp and manufactured the first mint julep ever drank at Floyd's Peak. In the evening we moved on, passing Alexander's cañon, and encamped at a small spring hidden in the rocks, and which I called after my negro servant, who discovered it, Ab's spring; here we found quite sufficient water for the use of the animals. Little Axe killed an antelope.

July 14.—We started late and travelled to King's creek, in which we found no water, but plenty of grass all over the country; this region abounds in cedar. The Delaware killed an antelope.

July 15.—Leaving King's creek at two in the morning, we came to Law's spring, named after one of my men, in which we found plenty of water; it lies to the left of the road going east, about two hundred yards in a pine grove. We nooned here and came on to encamp at Bear springs—these are a cluster of some seven or eight springs breaking out in a noble pine forest with luxuriant grass all through it. The Delaware killed an antelope, and Little Axe a bear.

July 16.—Leaving Bear springs we passed Breckenridge's springs—the largest of these springs is to the left of the road some four hundred yards as one travels to the eastward; in the evening we encamped at Leroux's springs. The Delaware killed an antelope, and Little Axe a black-tailed deer.

July 17.—Spent the day at Leroux's springs.

July 18.—Leaving Leroux's springs, we encamped between Cosnino caves and Walnut creek. As I have before stated, the great pool on which travellers and emigrants must rely for water lies below the caves, and crossing of the creek about a quarter of a mile. I measured this pool yesterday—it was sixteen and a half feet deep, seventy feet long, and about forty feet in width; in it I saw many fish, some of

them six inches in length, and resembling trout, both in their shyness and rising to the surface to snap flies and insects falling into the water. A few days since I sent Mr. Carrington with a party to examine the western slope of San Francisco mountain. They returned yesterday, having found a fine country abounding in game, of which they killed a wild turkey and a brown bear. The Delaware killed an antelope to day; a fine rain has fallen this day.

July 19.—Left our camp near Walnut creek, stopping at it only to breakfast; arrived at the Colorado Chiquito and encamped on the cut-off.

July 20.—We raised camp early, and travelling ten miles, encamped for breakfast at the spring discovered under the bluff of the Mesa on our outward bound journey, and which I have called after a gentleman of my command named Thompson. The road made over the Mesa, as we went westward, stands perfectly undisturbed by the heavy rains, which have fallen on it, and is even the better for it.

July 21.—We crossed the Little Colorado without difficulty, and travelled up it until we encamped near the Cotton-wood fork; grass excellent; Delaware killed an antelope.

July 22.—We travelled on the Little Colorado until our road left it. The Puerco we found a running stream, as also Dry creek, too; both were full to the banks. We encamped for the night on the eastern slope of the hills descending to the creek. Little Axe killed an antelope.

July 23.—We passed Xara and encamped near Jacob's well, in the cedars.

July 24.—Passing Jacob's well, we encamped near Zuñi. The Delaware killed an antelope.

July 25.—Leaving Zuñi, we encamped for breakfast, three or four miles to the eastward of it, just where the creek enters a cañon. Before coming to this camp is a bad hill up the Mesa, over which the old road leads. Just before arriving at it, travellers going west should turn to the left and take our road, which avoids it entirely without loss of distance, and is excellent. The only impediment we found was an arroyo, which we filled up with stone, making the road good around the bluff of the Mesa, instead of going over it and avoiding a steep pull. We encamped for the night between the Ojo Pescado and Inscription rock. The Delaware killed an antelope.

July 26.—Passing Inscription rock where we breakfasted, at the spring, in the valley which drains its waters into the Pacific, we crossed the Grande Divide and encamped for the night at the Agua Fria, where the water drains to the Atlantic.

July 27.—We encamped on the Gallo river, near our old camp of two years ago. It is pleasant to contrast the rapidity and ease with which we now pass over the fine road from here to the Colorado river, with the feelings of doubt and uncertainty which were our constant companions on our exploration and first survey of that then unknown region. *The Delaware and Little Axe* killed two antelopes.

July 28.—Encamped near the Indian town of Laguna, near the Puerco.

July 29.—Reached Albuquerque.

Table of game killed by the hunters, Delaware Dick and Little Axe, on the wagon road, 1858 *and* 1859.

The two hunters, Dick, the Delaware, and Little Axe, a Shawnee, were employed in that capacity, and took the above number of valuable head (beside smaller game) in about one hundred days' hunting; on many parts of the road game was very abundant. A large amount of the game taken by others of the party is not mentioned in this report.

SIR: In compliance with your request, I have the honor to present to you herewith a brief sketch of my journey across the plains from Albuquerque to North Fork Town, in the month of June last, over the Pacific wagon road of the 35th parallel.

The mail party, with which I travelled, left Albuquerque on the morning of the 15th of June, and reached Hatch's ranch the next evening, having accomplished, with a single team of mules, 110 miles in 36 hours.

The road to the ranch is excellent throughout; the surface for the most part gently undulating, compact and firm, free from stones, and not readily washing in gullies. Water occurs at frequent intervals, except upon the high prairies between the Cañon Carnael and the Cañon Blanco, where the lagunas, which are sometimes dry, furnish the only supply. The artesian well, or Galisteo's creek, if successful, will prove to be of great importance, as it is situated about midway between the cañons. The cut-off, located by yourself between the Chupainas and the Cañon Blanco, afforded us an excellent road, besides saving the great detour in passing by Anton Chico.

After a delay of twenty-four hours at Hatch's ranch, the mail party again set out. The outfit comprised a wagon, heavily loaded, and seven mules, with which we were to make, without relief, a journey of nearly 850 miles.

After crossing the divide between the Gallinas and the waters of the Canadian, the ascent to which was effected by a very moderate grade, we had a fine rolling prairie country to traverse, nearly to the Laguna Colorado, 54 miles. A few spurs from the Mesas, south of the road, break in upon the monotony of the undulating prairie a few miles west of the laguna. We found plenty of water within easy reach, the longest drive being 14 miles. We were now in the Plaza Larga, through which the road is unsurpassed in its excellence. The valley of Tucumcari creek presented a fine view of beautiful country. Mottes of cotton-wood in full foliage could be seen at short intervals along its banks, of such size, as to satisfy me that the estimate I had made of the quantity of timber in this section of the country, last winter, was much too small. The grass was very luxuriant. When I left the Rio Grande, except upon the banks of the streams and the tops of the mountains, there was not a blade of new grass to be seen. Here it was most abundant.

The distance from the laguna to Rocky Dell creek, at the foot of the Llano Estacado, 84 miles, we made in 36 hours. On the 19th we travelled 51 miles. The longest drive taken was 13 miles. Many of the arroyos from the Llano which cross this portion of the road contain a good supply of water in pools the greater part of the year. We found the grass excellent. The rapidity of our progress would indicate the condition of the road.

The passage of the Llano Estacado was soon accomplished. It is impossible to imagine a more perfect natural road than that afforded by the smooth, level surface of this remarkable plain. When we were fairly on the Llano, as far as the eye could reach there was nothing to be seen but a level waste of land, covered with the short buffalo grass, now beautifully green, and unbroken by drain or arroyo,

bare of the faintest sign of vegetation, save the grass. It is 18 miles from Rocky Dell to the Agua Piedra, the longest drive without water, from Hatch's ranch to the States.

Leaving the Llano we crossed a somewhat broken country, which is cut by numerous streams to the Canadian valley. Except at Shady creek, where some sand is encountered for a mile or two, the road was good and the travelling easy. About six miles east of Shady creek there is a fine spring within a few yards of the road. The grass was even better than further west. It will never be necessary to drive more than ten or twelve miles without an abundant supply of water, either running or in pools, and I have little doubt that careful examination would lead to the discovery of numerous springs.

Along the valley of the Canadian we found the most luxuriant vegetation. The rich, rank grass, the full-leaved cotton-wood, hackberry, and wild plum trees, and the abundant grapevines, indicated a vigorous soil and plenty of moisture. Just as we reached the Canadian valley we were caught in one of the heaviest rains I ever saw. It beat through the double canvas of the wagon in ten minutes, and continued to pour down in torrents for an hour and a half. Despite this, we found the road solid and good the next morning. Valley river was fully twelve feet deep when we reached it, but falling at the rate of twelve inches an hour. A little search showed us that we could cross it upon the bar at its mouth, which was done after a few hours' delay. The extremely porous nature of the wide bed of the Canadian renders the absorption of the waters brought to it by its tributaries so rapid that they rarely reach the main stream. Though we crossed Valley river several hundred yards from its junction with the Canadian, it was scarcely two feet deep, while two hundred yards higher up it was fully ten. Except in time of freshets, this stream has no visible connexion with the Canadian.

We travelled rapidly along the valley of the river till we left it to avoid the road near the Antelope Hills. The road was always good—so good, in fact, that with animals that had travelled nearly four hundred miles we were making an average of forty-five miles a day. Water was always plentiful and the grass most excellent.

I feel satisfied that the quantity of timber along the valley has always been underestimated. Every little tributary of the river is lined with cotton-wood and hackberry, and large groves occur frequently on both sides the main stream. The fertility of the valley cannot be questioned, and its great extent will sometime render it the home of a large population. Better pasturage is not to be found anywhere than is afforded by the high lands of either side; the mild climate of this region and the pure bracing air should offer further inducements to settlers.

Near the Antelope Hills we met a large drove of cattle *en route* to New Mexico from the Indian territory. They bear witness to the capabilities of the road for the purposes of drovers.

Leaving the Antelope Hills, we again descended to the valley of the Canadian, and followed it over a good, solid surface for above twenty-five miles, when we began the ascent of the divide between it and the Washita. The road here is tolerably good; after the summit of the

ridge is attained the surface improves, and thence to the Washita valley will compare favorably with that of any portion of the route.

Along the Washita valley the numerous creeks which empty into it offer a slight obstacle to heavily-loaded wagons. Flowing between high banks, and being subject to freshets, no temporary bridges can be of much service, and sometimes these streams are so swollen, as to be for a few hours impassable.

Timber is so plentiful in their immediate neighborhood, and good bridges might be so readily and cheaply constructed, that it would seem expedient to remove the only impediment to trains that exists upon the whole route.

The valley of the Washita differs in a marked manner from that of the Canadian. The bed of the stream is comparatively contracted, and the low grounds have a more decided rise towards the hills. The timber is chiefly black oak, and of large size, sometimes measuring as much as five or six feet in diameter. The soil appears to be excellent. The grass was remarkably fine. The seasons are evidently much more forward here than on the Canadian.

From the Washita valley to the crossing of the Canadian, near Choteau's, we had a fine rolling country to travel over, abounding in grass and well watered. In almost every little arroyo leading from the highlands either to the Canadian, the Washita, or Walnut creek, water can be found. As a large portion of this part of the road passes through the cross timbers, wood is very abundant. The surface is solid and firm, only undulating enough to render travelling easy and rapid.

In passing from the headwaters of Walnut creek to the Canadian the mules trotted the 17 miles without a break.

Crossing the Canadian without difficulty, we drove through a fine country, alternately prairie and woodland, to Jesse Chisholm's house, the first settlement reached by the travellers from the west.

From Chisholm's to North Fork Town the only difficulties encountered consist in the rocky spurs from Boston mountain. For about eight miles west of Aird's trading-post, at Little river, the road was much broken and very rough. A small expenditure of money to remove the sandstone ledges and boulders at this point would be well-applied.

The remainder of the distance to the Canadian, after crossing Little river, was through a fine rolling country with numerous prairies. The soil gave every indication of fertility. Corn was already ripe and remarkably fine in appearance.

Throughout the whole route to this point, at which we left the Pacific wagon road to travel nearly due north to Neosho, we found no trouble or difficulty in obtaining abundant supplies of water, wood, and grass. No detention was occasioned at any place by bad roads, and the animals which brought us so rapidly along for so great a distance without relief came in at Neosho in quite as good condition as that in which they left New Mexico.

No better proof of the excellence of the route could be adduced, I may add, than that two of the party with which I came in who were of long experience on the western plains, and who had crossed from the States to the Rio Grande on nearly every known route, assured me that they

regarded this road as possessing in the highest degree all the requisites of a first class emigrant and stage route, and that it was in all respects vastly superior to any other they had travelled.

I am, sir, very respectfully, your obedient servant,

J. R. CRUMP.

E. F. BEALE, Esq.,
Superintendent, &c., &c.

Table showing the hour of departure from and arrival at camp of the expedition of E. F. Beale, (on return from Colorado river,) from Leroux Spring, San Francisco mountain, to Albuquerque, New Mexico.

Date.	Camp.	Hour of departure.	Hour of arrival.	Hours marching.
July 18	Leroux Spring	4. 55 a. m.		
		10. 15 a. m.	6. 45 m.	1. 50

I have caused this table to be kept in order to exhibit the ease with which loaded wagons may pass over that portion of the road which I consider the least favorable for wheel vehicles. That portion east of Leroux Spring has been thoroughly worked, and is in every part complete as a wagon road. In returning, during the time that this table was kept, our animals were subsisted entirely on grass, and this table, for these reasons, is considered as important, giving evidence as it does, of the favorable character of the road.

E. F. BEALE, *Superintendent.*

June 29, 1859.—The wagons and pack mules left the military camp at nine a. m. After crossing a sandy plain of an ascendant grade, extending about six miles back from the Colorado river, we entered a narrow gorge which leads to the crossing of the Colorado range of mountains. Four miles from the point of entrance into the gorge we found water, in a hole which had been dug by our working party. Its quality was excellent, but as its flow was small we pushed ahead. Half a mile from this spot water can at times be found in a hole on the right of the road, near a slight growth of cotton-wood. We followed the well-marked road through the pass for about eight miles, when we crossed the mountains by the most excellent road, which had been built by Mr. Bishop's party during our stay at the river. The entire road is of light grade, and rendered firm and durable by a strong outer wall of stone. Every difficulty of ascent and descent has been removed, and wagons of any weight can be drawn over without any extraordinary effort, and without injury to animals.

Near the summit, a well-marked trail on the left leads to a permanent spring of clear, pure water; animals may be taken there with ease. Our working party of eighteen men encamped there for several weeks. The supply is sufficient for a large quantity of stock. After a ride of about two miles we reached the eastern edge of the mountains, where we had left our wagons and working party. A spring of strong flow about ten feet from the road watered our entire herd without difficulty. Weather during the day very warm and clear.

June 30.—We did not move camp to day. The party was engaged in preparing harness, &c., for a start. Soaked the wagon wheels in the spring, and set up the forge to repair iron work. I observed that as soon as we left the bottom of the Colorado, it became much cooler. The weather during the day was remarkably pleasant and clear.

July 1.—The party still at work on the wagons, &c. Mr. Beale decided to make a "cache" of all provisions, equipments, &c., not actually needed until the return of Mr. Bishop's party to the place. A party was sent ahead this afternoon to "Savedras spring," with tools to dig out the spring and prepare it for our arrival. Built an excellent wall around the spring by which our camp is supplied. Latitude of the camp 35° 10′ 02″.

July 2.—The party was engaged during the morning in stowing all dispensable property in the cache, and in preparing the train to start this afternoon.

At half-past five the mules were driven up, and in an hour our train was straightened out on the road. The articles deposited in the cache, together with four of our seven wagons, were left in charge of Mr. Renfroe. About two hundred yards from the camp, water for stock may always be found at a spring which has been dug out on the right of the cañon, and about two hundred yards below this there is a small spring of the finest water. Following the trail for a mile further, an inexhaustible spring of water can be found in a small cañon to the left of the road. The main road over which we passed has been

cleared of all stone and obstructions, and is of excellent quality. We reached Savedras spring at about three a. m. on the morning of the 3d.

July 3.—At Savedras spring we expected to find Mr. Beale, but as we did not meet him we concluded that scarcity of water had induced him to proceed to the next spring, distant five miles. Mr. Beale, however, was near the spring at the time, and the spring contained sufficient water for 500 head of stock; a second spring had been opened by the advance party which had started on the evening of the 1st. We drove about three miles further, and then followed a trail to the left for two miles, where we joined the camel train. They had encamped near a beautiful spring of water, which afforded a sufficient quantity for any number of stock; about 500 yards further on there is another spring fully equal to the first. Our pack-mules and wagons arrived at about five a. m. This afternoon we dug out the springs near our camp, and they were soon full of clear, cool water. The hole dug around the spring by which our camp is watered is about 12 by 9 feet, and about 5 feet in depth. The upper spring has proved to be superior to the lower.

Messrs. Beale and Bishop made a slight reconnaissance of the country this afternoon, and they report that they discovered a running stream of good water about a mile and a half from our camp.

This evening we had a thunder storm, which lasted for several hours. The heavy rain cooled the air delightfully.

July 4.—The morning was clear and cool. The ground was well moistened, and the grass seems freshened by the evening shower. After breakfast one of the teams was hitched up for the purpose of hauling stone to wall up the sides of the holes which we had dug around the springs. The lower spring is about 12 by 9 feet, and about 5 feet in depth; the upper spring is about 18 by 12 feet, and about 6 feet in depth. While digging out the upper spring a man was kept bailing constantly, in order to allow the work to proceed. The water of these springs is perfectly pure, perfectly clear, and as cold as ice-water. Thus far they are *the* springs of the road; they have been named "Bishop's" springs.

This afternoon, in compliance with the orders of Mr. Beale, we moved camp to the water discovered on the previous day. Leaving our camp we travelled over a rolling country for about a mile, when we descended into a narrow ravine, which soon brought us to camp. The creek, like most in this country, rises and sinks. Its rise is about 400 yards above our camp, and it sinks when about 50 yards distant from us. It runs swiftly over a stony bed, and the ground in the vicinity is hidden by a thick growth of cane and reed. Our mules browsed on the green growth with much relish, and the hill-sides were covered with excellent grass. The water of the creek is perfectly pure, and its supply is inexhaustible; it has been named "Armistead's creek," after Major Armistead, of the United States army. This place is easy of access, and all emigrants who pass over this road will find it advisable to make this a point on their route, as the amount of travel is not increased, and the distance between water is diminished. This would also be a desirable place to halt and recruit stock. Weather cool and pleasant.

July 5.—This morning, after breakfast, a party started from our camp with tools to facilitate the passage of the wagons out of the ravine, and another party started ahead with the camels to Gabriel's spring to dig it out, and then to await the arrival of the train. Shortly after noon a heavy bank of clouds rose in the east, and the entire sky was soon overcast, and the rain poured down in torrents. In the midst of the storm our mules were driven up and harnessed, and our train started. Retracing our trail we passed our point of entrance into the ravine of the preceding day, and continued down the ravine. Opposite the point of entrance the following notice is inscribed on a rock: "Water ¼ mile above." We continued on for about a mile further, when we ascended the hill on the left-hand side by an excellent road of light grade; we then descended into a beautiful valley, affording excellent grazing for our mules. We travelled about three miles, and then turned out. After supper we hitched up, and the train proceeded to encamp about five miles distant.

In compliance with Mr. Beale's orders, a party consisting of Mercer, Tucker, Long, and myself, with ten Indians, in charge of Mr. Carrington, started to explore the country in the vicinity of "Harry Edwards's mountain." We travelled about six miles, and then encamped for the night.

July 6.—We started at four a. m. After a march of three miles, we reached a conical-shaped hill, which can be seen from the main road, and then following a cañon directly opposite the hill, we rode to its head, and there we found a beautiful stream of water flowing from the top of the mountain to its foot, running swiftly over a rocky bed. The water of the spring is very slightly brackish; it is sufficient to water any amount of stock. It is easy of access, and the general appearance of the ground admits no doubt of its permanency. The valley is covered with good grass, and, like "Armistead's creek," would be a most desirable spot for persons driving cattle over the road to stop and recruit. The mountains in the vicinity are covered with pines of the largest size, and near the spring we found walnut, box elder, and scrub oak, all indicating richness of soil. After leaving this spring we examined the general appearance of the country, and we found that qualities already mentioned are widely extended. Our preparations not having been made for a long stay, we began our return, intending to meet the train at Gabriel's spring. We travelled until night, allowing our animals two chances to graze. We saw several antelope during the day's march. Rain fell in heavy showers several times during the day.

July 7.—Started this morning at half-past four, and reached Gabriel's spring at six o'clock. There we found the camel train, which had started in advance of the rest of the party. Shortly after our arrival Messrs. Beale and Bishop rode into camp; they had left the train encamped at Indian or Via spring, about nine miles distant. That spring was filled with water in sufficient quantity to water any amount of stock.

"Gabriel's spring," which was dug out and walled, affords a good supply of pure cold water, and, as it is about midway between "Truxton spring" and "Via spring," the distance between waters is not

nights and mornings are so cool that two pairs of blankets are very acceptable.

July 10.—The morning broke cloudy and cool; rain fell for about half an hour; the sun then came out, and the remainder of the day was bright and beautiful. At one p. m. the mules were driven back from "Hemphill's spring," whither they had been taken on the previous day, and after dinner we hitched up. The water-wagon was sent around to "Delaware spring," but the mules of the stage company, which passed me to-day, together with our sheep-herd, had nearly exhausted the spring. The train had just started when Mr. Beale ordered Messrs. Tucker, Carrington, and me, to go to a point of a mountain to the right of the road and to examine hastily the appearance of the country and the probabilities of finding water. We did so; and although we found no water, we found several well-marked trails which undoubtedly lead to water, and the most beautiful valley that I have ever seen. The grass was rich and luxuriant. The hills on either side were covered with large cedar trees, and the soil throughout the valley was rich and fertile. After turning around the base of the mountain to the left, we rode for some distance up the valley with a course running parallel to our road; we then struck across the hills, met the wagon trail, and found the train encamped about ten miles from the last camp. While on our road we saw a herd of antelope, but did not get a shot at them.

July 11.—The air this morning early was excessively chilly; the train started ahead at about five a. m. over the solid, level road which leads through the valley, and Messrs. Beale, Bishop, Kerlin, and I started across the valley, with the intention of going through "Tucker's Pass" and joining the train at "Floyd's Peak." We struck an Indian trail at a short distance from camp, and followed it to the mountains on the northern side of the valley, about eight miles distant from the main road, and then entering the pass we found an excellent road for trains of any description. On the right of the pass our attention was called to a slab of stone bearing inscriptions of lizzards and of other reptiles; the stone upon which these figures are carved is of fine hard grit, and would be far superior to our brown stone for building purposes. The country is covered with the finest quality of grass, and was pronounced by persons who have spent much time in our interior country to be the finest grazing tract that they have ever seen. Among the cedar trees with which the hills are covered we found a cedar whose trunk was covered with the bark of the white oak; these trees, which we found in great numbers, are generally, when full grown, between two and three feet in diameter, and the branches, which are similar to those of the common cedar, run out from the main body at a distance of about twenty feet from the ground. After eating our breakfast and allowing our mules to graze for an hour we started again, and ascending a small hill we saw "Floyd's Peak" about twelve miles distant. We continued our course along the ridge of the hills, still following the Indian trail, until Mr. Beale descried a narrow rocky cañon to our left, and supposing that we might find water there the party headed for the spot. Our expectations were indeed realized; we found at least half a dozen holes, which were filled with water of pure quality

and in large quantities. After watering our animals we turned them out to graze, and we turned in for a nap beneath the cool shade of a cedar; we spent about three hours there and then started. Following the course of the ravine, pool after pool of water was discovered, and the last which we saw was about twenty feet in breadth and between three and four feet in depth; Mr. Beale gave it as his opinion that water can be found in these places at any time of the year. Leaving the cañon we struck for camp, whither we were guided by fires which we saw to our right; we found there the camel train and our loose stock; they had camped near a deep rocky ravine, with water and wood in abundance; from the water in this place we had filled our water-wagon when we passed this place in the month of April, on our way to the Colorado. This is an evidence that water can be found here between the months of April and July, and I have no hesitation in pronouncing it permanent. The whole of the country over which we passed on our day's march was most favorable to a wagon road. It is thought that "Tucker's Pass" cuts off twelve miles from the main road; but if a party would start from "Garteus spring" and make a night march of twenty miles they would reach water on the next day at noon; such a course could involve no danger. The road is equal to any race-course, and it would be advisable for a wagon train to follow the main road; the wagons reached camp about seven p. m.; they had camped on an arroyo about two miles distant, where they had found water; we saw five deer while on the road. The weather during the day was clear and cool, with a delightful breeze.

July 12.—This morning we moved camp to a ravine about five miles distant; the water is in a rocky bed, and we watered our herd at this place while on our trip across; several holes in the rocks were filled with clear, pure water. The morning we started over to a place where water had been found to dig out and wall the spring; to our surprise we found no water, although the earth about two feet below the surface was extremely moist; it would be advisable to visit this place for the chances of finding water and good; we returned to camp and we were greeted by the pleasing intelligence that one of our party had discovered a running stream of pure water within three-quarters of a mile of our last camp; further examinations will be made to-morrow. Weather during the day cool and pleasant.

July 13.—This morning I started over to examine our newly discovered watering place. I found it in a deep rocky ravine, about seven hundred yards from our last camp. The main pool was six feet in depth, and contained an inexhaustible supply of clear, pure water. Messrs. Beale and Bishop visited the spot, and they pronounced it a permanent spring. This place has been named "Kerlin's Wells."

The party was engaged during the afternoon in preparing matters for an evening start. Mr. Beale decided to leave our three heavy wagons, our spare mules, and all dispensable property, at this place. The wagons were left in charge of a portion of Mr. Bishop's party. We started at five p. m., taking with us the water-wagon and two light wagons, with nine pack-mules. We travelled about ten miles and then encamped near a water hole, which contained an abundance of water for the party and the stock.

During the night we had frequent heavy showers of rain. Our hunter, Dick, brought in a fine antelope this morning.

July 14.—This morning early we set to work to repair an accident which had occurred to one of our wagons. A party, also, was started out to search for a pool of water which had been seen by one of our party while on the trip across. Our search, however, was unsuccessful. When we returned to camp we found that the wagons had started. We saddled up and went around to the spring, but could only find sufficient water for our own use, as over one hundred buckets had been taken out already. Some of our party started for "King's creek," by the way of "Bishop's Cut-off." By this route nearly fifteen miles may be saved between "Ab's spring" and "King's creek."

The road is passable for loose animals, but not for wagons. I took the main road, and joined the train about ten miles from the last camp. They had turned out the animals, but were then catching up. After watering the animals from the water-wagon we started, and reached "King's creek" at about 7 p. m. Here we found no water, and the animals were turned out to graze, and orders given to call camp at midnight. The grass along the road was excellent. Cedar forests extended nearly the whole distance, and the road was hard and level. We had a slight sprinkling of rain about sunset. The day was cloudy, with a pleasant breeze. We saw several antelopes during our day's ride.

July 15.—Camp was called at midnight, and at 1 a. m. we were on the road. We started for "Breckenridge spring," but we found an abundance of water at "Law's spring," where we arrived at about 5.30 a. m., distant from the last camp seventeen and a half miles. This spring is in a rocky ravine, about 300 yards from the road. The water, which is contained in two separate basins of rock, is situated at the western end of the ravine. The quality of the water is excellent, and it is in sufficient quantity to water a large amount of stock. The testimony of all who have visited this spot shows that the water is permanent. We allowed our mules to graze on the abundant green grass until 4 p. m., when we hitched up and started. At this spring we left our water-wagon. Our road, which passed through a beautiful grazing country, thickly timbered with pines of the largest size, brought us, after a ride of about seven miles, into the valley of Bear spring. I have never seen a more beautiful spot. The valley was about a hundred yards in width. Green grass in the greatest abundance covered the ground, and streams of the purest water ran in every direction. Pine timber of the largest size grew in dense forests, and extended for miles over the surrounding country. There are four springs which are permanent, and yield an inexhaustible supply of pure cool water. The first spring, which is about 40 yards above the spot where the road leaves the valley, was full of water. A stream poured from it which was about 40 yards in length. At a short distance below the spring a hole has been dug, which was full of water. The second spring, which is about 25 feet by 20 feet, affords a stream of 300 yards in length, in which three deep

holes have been dug. The third and fourth one full of water. The soil of the valley is dark and of good quality.

The weather during the day was pleasant. Rain fell several times during the night. Our hunter, Dick, to-day brought in an antelope, and our hunter, Little Axe, a bear.

July 16.—This morning we were ordered by Mr. Beale to make the circuit of San Francisco Peak. Our party consisted of Messrs. Carrington, Long, Thompson, and myself. We left camp just after the train started for Leroux spring, distant about eighteen miles; we struck off toward the western side of the mountain; when within about a mile of the foot of the mountain we struck a narrow valley, which we followed for several miles. The country through which we passed was similar to that already described. We encamped at 12 o'clock to dine. While at dinner our attention was called to something moving in the woods. It was found to be a bear, and eatables were instantly dropped, and we ran out, rifles in hand; one shot was fired, but our game escaped. After dinner we saddled our mules and started ahead. Some parts of the valley through which we passed were truly beautiful. We saw spruce firs over a hundred feet in height. Large groves of aspens were numerous. Some oak also was seen. While passing through a copse, we saw our bear and a flock of turkeys; chase was instantly given; one fine gobbler was shot by Mr. Carrington, but our bear disappeared for the second time. Mr. Carrington and myself then started off together, and while passing under a tree we accidentally espied our friend Bruin cosily seated in the branches of a spruce tree. A shot brought him to the ground, and a second settled him. We cut off his claws and left. During our day's ride we found no water, but the deep verdure of the grass, and the growth of weeds in the hollows and ravines showed that an abundance of water could be obtained by digging. We camped for the night near a hole which had been dug, most probably, by Sitgreave's party, and which contained some rain-water. We allowed our animals to roam around until about 9 o'clock, when we picketed them, and turned in for the night. Several times during the day the rain fell in heavy showers. The weather was pleasant, and the evening quite cool.

July 17.—This morning, at 4 a. m., we started from our camp. In the vicinity of the water hole near which we had encamped I observed a dense growth of fern and of different kinds of flowers. We continued our course around the mountain, over a level country, until we reached the northern side. We then struck a trail on the side of a hill, and followed it for several miles; our height above the general level was such at times that we could view the country for several miles in every direction. The hills for a great distance were covered with dense forests of pine, and the valleys were covered with luxuriant grass. We at last struck a gentle slope which we knew must descend into the valley of "Leroux spring." Our surmise was correct, for we soon met our wagon trail, and followed it into our camp, and found the party preparing for an early start on the following morning.

"Leroux spring," which rises in San Francisco mountain, flows into a valley on its western side; its stream is conducted by a trench down to one of the stations of the mail company; in the trench, which

is about 500 yards in length, several deep holes have been dug and walled around; the water of the spring is as clear as crystal, pure and cold; throughout the year it yields an unfailing supply; the weather during the day was cloudy, with occasional showers.

July 18.—The morning was rainy and quite cool. At 7 a. m. our train, consisting of three light wagons, left "Leroux spring." We left at the spring two heavy wagons and an ambulance, in charge of Mr. Bishop, whose party we left at this place; they are to work upon some portions of the road between Leroux spring and the Colorado river. Passing out of the valley, we travelled about two miles through a belt of timber. The surface of the country in this vicinity is somewhat rocky, and our trail was marked on the trees by three "blazes." Leaving the timber we entered the valley of "San Francisco spring;" in this valley the grass was luxuriant and water abundant. There is a beautiful spring about midway, to the left, and another about two hundred yards further on, on the opposite side. When abreast of "San Francisco spring" we left the main road and struck off to the right. Passing the springs, which were full of excellent water, we crossed the valley and encamped for breakfast. Scarcely had we reached the spot when a herd of antelope bounded across the plain within a short distance of our camp; our hunter, Dick, started in pursuit, and returned in a short time with a noble buck. For a while here the rain poured down in torrents. After breakfast we hitched up and struck off in the direction of our old road; our new trail was marked with the "blazes." After travelling a short distance with our train, which proceeded at a rapid rate over the firm level road, a party started over to look at a boat which had been hidden by the mail company, and then we returned to the train, which had encamped. We spent about an hour there, and then started and travelled to Colmirico caves; here a party of us started over to look at the cave; we found abundant water in the rocks in its vicinity. One train had encamped about 600 yards from the caves, with pure clear water in abundance. We did not enter the cave, but started, under the guidance of Mr. Beale, to look at a deep water-hole. We reached the spot after a short walk, and we found a deep rocky cañon, which, for some distance, was filled with water; the depth has never been discovered; the water is of the finest quality, and is easy of access; in it we saw mountain trout, some evidence of its permanency. It is situated about 200 yards from the road, to the right. In this cañon I observed a rock in which a hole had been bored by the rotary motion given to a pebble by the swift current of water which has passed over it when the pool has been high. Through the lapse of ages the work has been accomplished. The hole, which is perfectly round, is about twelve inches in diameter and about two feet in depth, and the elevated position of the rock gives it the appearance of a mortar. We returned to camp in the midst of a dense rain and dined. After dinner we hitched up and the train started. Mr. Beale ordered Messrs. Carrington, Long, Blount, Thompson, and me to proceed to a mountain about eight miles distant, and to examine the nature of the country and the course of the cañon Diablo. We travelled in a southerly course for about six miles and then encamped for the night. The

country was well wooded with cedar and of a rolling nature. We found water for our animals in a ravine near our camp. The evening was showery.

July 19.—This morning we started and travelled about five miles; we then turned out our animals and breakfasted. We started after our meal, and in a short time we struck cañon Diablo, running north and south. The cañon was about 200 feet in depth, with perpendicular walls of rock. A glance showed that all attempts to cross below or above the point where we struck it would be useless, and we were compelled to return to the road and to give up the cut-off which we had projected. We rode several miles and then descended into a deep cañon, which we supposed to be Walnut creek, and which was a branch of cañon Diablo. We there found a beautiful pool of pure, clear water; it was about five feet in depth; in it we saw many fish resembling trout. We stayed there until 3 p. m., when we again started and travelled until 7 p. m. Two of our mules began to show signs of fatigue; the grass generally was dry and scarce, and they had been travelling steadily. At 10 p. m. we started and travelled by moonlight, reaching the Colorado Chiquito at 11 p. m., and started again at midnight. We saw two antelopes in the morning. The weather was cool and pleasant.

July 20.—We travelled until three a. m., when we turned out until half-past five a. m., when we started and reached "Thompson's spring" at half-past ten a. m. Messrs. Long and Thompson, who had fresh mules, had reached the spring about half an hour before the train started. They gave information of the cause of our detention, and accompanied the train to the crossing of the Colorado Chiquito. At the spring Messrs. Carrington, Blount, and I ate a breakfast which Mr. Beale had kindly left for us. At four p. m. we started, and at eight p. m. we joined the train, which had encamped about a mile from the crossing of the Colorado Chiquito. Rain fell about noon.

July 21.—This morning we started at five a. m., and in a short time we reached the river crossing. On our arrival we found that the water had risen during the night, and that scarcely a trace of the work done there on the preceding day was left. We turned out the mules, and after breakfast the bank was cut down, and we crossed our wagons and stock with but little trouble. About two miles from the river bank we again turned out, and allowed our mules to graze for about two hours, when we again started. Our road, which was nearly parallel to the river, was level and generally hard and firm. In some places the heavy fall of rain had softened the upper soil, but these spots were unfrequent and unimportant. During the day I saw many streams of running water, occasioned by the drainage of rain from the mesas above, running back from the river. We continued our ride until about half-past three p. m., when we again halted. After we had dined we started and travelled some miles further, and encamped about seven p. m. on a slight elevation. Rain fell in heavy showers during the day. The weather was quite cool. From our road we could see that the grass along the river bottom was fresh and plentiful. The grass along the road at some points was excellent.

July 22.—This morning we started about five a. m., and after a ride of a few miles we left the banks of the Colorado Chiquito and struck inland. At a short distance from the river we crossed a running stream of about twenty yards in width, and further on we skirted along a second stream of at least sixty yards in width, and apparently very deep. The water was foaming and boiling in its course to the "Little Colorado," which was about a mile distant. When we passed these places in April last the beds of these rivers were dry, and although they are now of no essential use, their condition in rainy weather will afford a striking evidence of the great amount of rain which falls in this section of our western country. We turned out twice during the day. The roads in some places on the plains near the river bottom were muddy, but they occasioned little delay. We reached Dry creek about five p. m.; we crossed a small stream of water which was flowing slowly through it, and then riding about two hundred yards over its bed we left it, and ascended the mesa on the eastern side. Numerous pools of excellent water were seen near our road. We encamped for the night near one of these, and herded our mules on the excellent green grass, which was abundant. The weather during the day was cloudy, and rain fell in heavy showers several times.

July 23.—This morning early we started, and after a march of about seven miles we reached a bed of a stream which was dry when we passed it in April last, but through which there flowed a small stream of about five yards in width. We breakfasted there, and after a stay of two hours we started, and passing over a level country, generally of a gradually descending grade, we reached Cottonwood creek. Here, indeed, was a change: where we had formerly found only pools of water we now met a swiftly running stream of several yards in width, and in one place so deep that we could not touch bottom. The water was very muddy and cool. We turned out the mules, and every man stopped and assisted in carrying our property across the stream. A place had been found where the stream was about four feet in depth and could be forded with facility. Our baggage-wagons and stock were crossed without loss, and after dinner we started. Travelling about five miles, we reached Navajoe springs, which are five in number. They are within a few feet of the road and yield an inexhaustible supply of the purest water that I have ever tasted. We watered our stock and started for Jacob's well, seven miles distant. Before we reached the well we saw a large pool of rain-water to the left of the road, and there Mr. Beale decided to camp. The evening was remarkably cool and rainy. Two heavy showers of rain fell during the afternoon. It is somewhat singular that, although rain may fall during the day and early in the evening, the nights are invariably clear. The grass on our route to-day, which was principally bunch grass, was in some places green and luxuriant. Our road was hard and firm, except in the vicinity of Navajoe springs, where we found mud for about 200 yards. Bright camp-fires were kept blazing from the cedar in which we had encamped, to keep off the chill of the evening. This morning our hunter, Little Axe, brought in a fine antelope.

July 24.—About 5 a. m. this morning we started. Passing Jacob's

well, we continued our march over a fine level road, well timbered with cedar and affording good grass. We halted at "Jacob's Jump-off," about eight miles distant from the spring, and breakfasted. After staying there about two hours and a half we hitched up and started. Water was seen in large pools in many places along our route, and the sides of Jacob's well bore powerful evidences of the heavy fall of water. Deep gullies had been cut in the soft earth on the grade descending to the water in the well. We continued our march over a rolling country, with much cedar, and in many places excellent grass. We encamped about six miles from the Indian pueblo of Zuñi. The mules were driven over to the creek by which the pueblo is watered, and then herded on the excellent grass which abounded in the vicinity of our camp. Our hunter, Dick, brought in an antelope to-day. The weather during the day was cool and cloudy, with showers of rain during the afternoon and evening.

July 25 —This morning, about 4.30 a. m., we started and soon reached the Indian pueblo of Zuñi. The train proceeded above five miles east of the town and then encamped. After breakfast we started, and passing through a narrow valley of about a mile in length, we reached one of our old camps. Here we found a patch of beautiful grass, and Mr. Beale ordered the herders to stop the loose stock for a short time. Leaving this place, we struck the bed of the Ojo Pescado. Following this through a valley for above three miles, we reached the head of the stream. This spring rises from a sandy bed beneath an overhanging ledge of lava rock. The pure, clear water runs rapidly, and forms a stream of miles in length. We spent two hours there and then started and travelled about five miles over a smooth road of continued light ascending grade. We encamped for the night with timber in abundance and a good supply of grass. Large forests of cedar and piñon extended all along the line of our road from the breakfast camp. The grass was generally good. Heavy showers of rain fell during the day. The evening was delightfully cool and clear. A party of Indians from Isleta joined us this evening.

July 26.—This morning about 4.30 a. m. we started from our camp. The ascending grade of the valley continued for about five miles, when we ascended the ridge and we found a descending plain. Passing over a beautiful road, through a country covered with forests of heavy pine timber, and affording excellent grazing, although not so far advanced as some previously seen, we reached El Moro or "Inscription Rock;" we stayed there about two hours, and then started, after watering our stock from the pool of excellent water which is just at the junction of the two wings of the rock. Leaving the mountain and the broad, beautiful valleys which make this rock their grand centre, we passed the large mountain to the right, which shuts the rock from view, and rode at a rapid rate through successive belts of noble pine, and through fertile grassy valleys, until, by an almost imperceptible grade, we reached the summit of the Rocky mountains. We descended the mountain over the well-constructed inclined plane built by our party, and in a few minutes we reached "Aguafria," or "Cold spring." Here is one of the stations of the Central Mail Co. The spring is just to the left of the road; it pours in a crystal stream from a rocky mouth and flows in a clear stream over a pebbly bed for above

five hundred yards; the water is delicious. In the middle of summer it was so intensely cold that we could hardly drink it. Leaving this place, we proceeded to one of our old camps, in a beautiful valley, about a mile further on. The grass was most luxuriant; our mules were allowed free range, and in two or three hours the herd was satisfied. A fine spring of cold water is on the left of the valley in a small ravine; it flows from the mountain top, and empties into a stony basin at its foot; it is perfectly pure, and sufficient for any amount of stock. The day was cool and clear. Our hunter, Dick, brought in an antelope this evening.

July 27.—This morning early we left our camp, and following our road through the heavy pine timber, we passed through a perfect garden. The road, which was of a gravelly nature, was hard and firm. For miles this beautiful travelling extended, and the train passed rapidly over it, making four miles an hour on a walk. We encamped for breakfast at about 7.30 a. m.; we found water in a rocky hole, about four hundred yards to the left of the road; the water was of good quality, and looked as if it was permanent After a stay of about two hours we hitched up, and the train proceeded to the "Ojo del Gallo creek." Mr. Beale ordered Messrs. Carrington, Long, and me to follow a trail to the left, and to join the party on the "Ojo del Gallo," to examine the country for a wagon road, which would make a cut-off of four miles. We did so, and found that the country was impassable for wagons on account of a broad lava bed which our riding animals crossed with much difficulty. The "Ojo del Gallo creek" is about three feet deep and about fifteen in width; it flows into the Rio Grande; its current is very swift, and the water is pure and clear. In the stream we saw shoals of fish resembling perch, and quite a mess of them was caught. Along the creek a huge wall of lava has been heaped, layer upon layer, until a huge barrier has been formed around its mouth. Pools of water, clear as crystal, were found in the deep chasms and fissures in its centre. For miles I could trace its dark line running parallel to our road, at some times attaining a width of half a mile. Huge rocks, piled one upon the other, bore powerful evidences of the mighty force which had existed there when this huge furnace of nature had been in blast. The country in its vicinity showed its extent, for the surface for many miles was covered with small chips of the stone. The ridge is crossed by our road at a very narrow point, and the ascent and descent are by no means difficult. We herded our animals on excellent grass near the creek until about six p. m., when we hitched up and travelled about two miles and encamped. Our hunter, Little Axe, brought in a fine antelope to-day. The weather during the day was clear and warm, and in the evening we had a slight shower and a cloudy sky all night.

July 28.—This morning camp was called at 2 a. m., with the intention of making a long, early march, as it was reported that grass could not be found for some distance. Owing to delay in catching the team animals, we did not leave our camp until about 4 a. m. We travelled until near 7, when we found an excellent patch of green grass, and we turned out the mules and breakfasted. We then hitched up, and in a short time we reached the Mexican town of Covero. Passing through the town, we travelled over an excellent road

of a descending grade, and camped within two miles of the Indian pueblo of Laguna. We found an abundance of water in some holes; water may always be found in some lagunas near the town. I observed one laguna nearly a half mile in length. Hitching up, we passed through Laguna, and crossed "Laguna river," a stream flowing into the Rio Grande. It is swift, about ten yards in width, and two or three feet in depth. We travelled about five miles beyond the town, and then encamped on the banks of the Laguna river, on a patch of several acres of luxuriant green grass. Timber near the road was scarce, but the mountains were covered with cedar. The weather during the day was cool and clear, and the evening cloudy.

July 29.—This morning we started from our camp on the Laguna river, and after a ride of a few hours we reached "Sheep's springs." These are situated about four hundred yards from the main road; deep and well-marked trails lead to them. The water flows in a rapid stream from the mountain side and pours into a pool which at all times contains an ample supply. The water of one of these springs is very slightly brackish; that of the other is perfectly pure. Grass along our road was backward, but promised to be excellent. The country in this vicinity did not show the mark of heavy rains as much as that further west. Our march from "Sheep's springs" was through a succession of broad, beautiful valleys, running north and south; cedar was in abundance along the route. We encamped within a mile of the "Rio Puerco," with excellent grazing for our animals. The grass was like that mentioned above, but every mile over which we have passed testifies that, as a grazing country, this section of New Mexico cannot be surpassed. We found that the water in the Puerco had risen to such a height that it would be necessary to carry all of our property across and to drag the wagons over. A party started down to the stream, and the wagons were drawn to the banks of the Puerco, and the teams were then sent back. By 6.30 everything was on the eastern side, and the party returned to camp. The weather during the day was cloudy and cool.

July 30.—This morning camp was called at 3.30 a. m., and we started down to the stream. We crossed our stock without difficulty, and hitched up. The water in the river had fallen considerably during the night, so much so that we rode across on our animals. We travelled over a sandy road of a descending grade until 10.30 a. m., when we encamped on the banks of the Rio Grande. The river bottom was covered with an abundance of meadow grass, and for miles we could see the green patches extending along the valley of the river. Our road strikes the river about two miles below the town of Albuquerque. The river had been so swollen by the rain in the mountains in the north that our wagon had to be crossed in a scow, although Mr. Beale crossed on horseback directly opposite Albuquerque. The weather during the day was warmer than any that we have hitherto experienced. This is on account of the great descent from the high land to the valley of the Rio Grande.

Respectfully submitted.

F. E. ENGLE,
Assistant.

E. L. BEALE, Esq.,
Superintendent, &c., &c.

HEADQUARTERS, *Albuquerque, N. M., January* 24, 1859.

DEAR SIR: Your communication of the 22d instant, enclosing the resolutions of the public meeting, requesting my opinion "as to the great importance, necessity, practicability, and probable cost of building and constructing a bridge crossing the Rio Grande at Albuquerque," I had the honor to receive on yesterday.

The importance of a bridge crossing the Rio Grande at or near this city I deem of the greatest necessity, whether to the citizens at large, in passing their merchandise and stores, or to the general government, in the quick despatch of troops, trains, or the mails westward. The Rio Grande is a wide, shallow stream, its bottom of quicksand; in winter the ice is rarely sufficiently thick to bear a loaded wagon, but will mules; in summer the high water washes out deep holes. No river on the globe is more dangerous, or has sacrificed more human and animal lives.

There is not a doubt in my mind but it is perfectly practicable to build a bridge at or near Albuquerque. Its cost will depend upon its location; if at bluff banks, with rocky bottom and banks, much less than where the river is wide, shallow, quicksand bottom, and low banks. I have not sufficient mechanical or architectural knowledge to furnish an estimate to be relied on, but suppose, from the scarcity of wood, stone, and lime in this vicinity, it would be sufficiently safe to say, a durable, substantial, useful bridge could be erected at or near this place for $50,000.

I am, major, respectfully, your obedient servant,

D. MILES,
Lieutenant Colonel 3d Infantry, Commanding Post.

Major W. L. LAWS,
Chairman of the Committee.

SANTA FÉ, *New Mexico, January* 24, 1859.

GENTLEMEN: In reply to your letter, transmitting the resolutions of the public meeting held at Albuquerque on the 21st instant, I will say that a good, substantial bridge across the Rio del Norte would be most valuable in connexion with military operations. It is well known that high winds and ice frequently prevent crossing for days; also that quicksands at many of the fords are of the most dangerous kinds; and I repeat, a good, substantial bridge across the Rio del Norte is much wanted, not only for military purposes, but for the constant travel of the country.

As to the cost of such a bridge, it is a question more for engineers to decide upon than for myself.

Common *tressel* bridges, fifteen feet wide, I have always believed to be the cheapest of construction, and probably all that is required.

I am, gentlemen, most respectfully, your obedient servant,

B. L. E. BONNEVILLE,
Colonel 3d Infantry.

Major W. L. LAWS,
Chairman of Committee, and others, Albuquerque, N. M.

MILITARY DEPARTMENT OF NEW MEXICO,
Santa Fé, January 29, 1859.

SIR: I have the honor to acknowledge the receipt of your letter, addressed to me under a resolution of the "public meeting" which was held in Albuquerque on the 21st instant, requesting my "views as to the importance, &c., of a bridge across the Rio del Norte at or near Albuquerque, and the probable cost of such bridge;" and in reply thereto, I would respectfully state that it is of the utmost importance to have a bridge in that vicinity, even if there should be no other object in view than to facilitate the crossing of the military trains; for it is not only necessary to cross the river there to communicate from the principal military depot at Albuquerque to all the posts west of the Rio del Norte, but it is generally considered preferable in communicating with the posts in the southern part of the department to pass up and down on the west side of the river, on account of the greater accommodation in regard to wood and water, even in the face of the necessity of also crossing the river to the south of the "Jornada del Muerto."

During the long periods of low water in the Rio del Norte it is impossible to cross in the ferry-boat, owing to the great extent of shifting sands; and these same sands, and the uncertainty of the depth in the channels, and of the permanency of the river banks, render it a dangerous undertaking to attempt to ford this stream. But it is also to be observed that the "great military road" from Fort Smith (Arkansas) to California, now in the course of construction under the direction of the War Department, "on or near the thirty-fifth parallel of north latitude," crosses the river in the same vicinity; and this road is destined to be of vast importance as a mail route, and the most desirable one for the tide of emigration to California; hence the "importance, necessity, and utility of a bridge" in the vicinity above named must be apparent to every one. From the well-known abundance of the best pine timber and stone within easy reach of the locality in question, there can be no doubt as to the "practicability" of constructing the desired bridge at a reasonable cost; but an estimate in detail can only be presented after a careful preliminary survey of the different sites deemed eligible near Albuquerque. The enclosed copy of a report made by the Committee on Military Affairs at the last session of Congress will show what is required for the suitable surveys upon which to base estimates for the bridges that are required over the Rio del Norte, and I deem the one near Albuquerque the most important of them all.

I remain, very respectfully, your most obedient servant,
JOHN N. MACOMB,
Captain Topographical Engineers,
United States Army.

Mr. W. L. LAWS,
Chairman of Committee, &c., Albuquerque, N. M.

ASSISTANT QUARTERMASTER'S OFFICE,
Albuquerque, New Mexico, February 3, 1859.

SIR: Your communication of the 22d ultimo has been received. Owing to my having been much occupied, I have not been able to reply to it at an earlier date.

As to the importance and necessity of a bridge across the Rio Grande at or near this point there can be no doubt.

I believe there are several points near here where a bridge can be constructed without any great difficulty or expense. The difficulty of fording or ferrying the Rio Grande during many months of the year is well known to all our citizens.

A bridge across the river at this point would be of incalculable benefit to the army in its operations in this country, as well as to the community at large.

The principal depot of army stores being at this place, and the roads to many of the posts in the department crossing the river at this point, renders the construction of a bridge near here more necessary than at any other place on the river.

During the time I have been serving at Albuquerque considerable delays have frequently occurred in crossing stores and troops destined for different posts and operations in the field, which delays would have been obviated had there been a suitable bridge.

I have the honor to be, sir, very respectfully, your obedient servant,

D. H. RUCKER,
Brevet Major, Assistant Quartermaster.

W. L. LAWS, Esq.,
Chairman of Committee, &c.

36TH CONGRESS, 1st Session. } HOUSE OF REPRESENTATIVES. { Ex. Doc. No. 43.

ART COMMISSION.

LETTER

OF

THE SECRETARY OF WAR,

COMMUNICATING,

In compliance with a resolution of the House, the report of the art commission.

MARCH 9, 1860.—Laid upon the table, and ordered to be printed.

WAR DEPARTMENT, *March* 7, 1860.

SIR: I have received from the Secretary of the Interior the resolution of the House of Representatives of the 2d instant, calling upon that officer to communicate "the report of the art commissioners, and the accompanying documents, made to the President of the United States;" and, in compliance with the request contained in that resolution, I have the honor to transmit herewith a copy of the paper referred to.

No documents accompanied the report.

Very respectfully, your obedient servant,

JOHN B. FLOYD,
Secretary of War.

Hon. WILLIAM PENNINGTON,
Speaker of the House of Representatives.

REPORT OF UNITED STATES ART COMMISSION.

OFFICE OF UNITED STATES ART COMMISSION,
Washington, February 22, 1860.

SIR: The United States art commission, authorized by acts of Congress of June 12, 1858, and March 3, 1859, and appointed by the President May 15, 1859, met and organized the 15th of June following, and subsequently made their preparatory survey of the public buildings and grounds at the seat of government, for the purpose of maturing a general plan of action for carrying out the work intrusted to their charge. For the furtherance of this object they beg leave to submit the following report upon the system of decoration heretofore adopted in those buildings, and to recommend such plan for their future art decoration and embellishment as will, in their opinion, best secure a harmonious result.

The erection of a great national capitol seldom occurs but once in the life of a nation. The opportunity such an event affords is an important one for the expression of patriotic devotion, and the per-

petuation, through the arts of painting and sculpture, of that which is high and noble and held in reverence by the people; and it becomes them, as patriots, to see to it that no taint of falsity is suffered to be transmitted to the future upon the escutcheon of our national honor in its artistic record. A theme so noble and worthy should interest the heart of the whole country, and whether patriot, statesman, or artist, one impulse should govern the whole in dedicating these buildings and grounds to the national honor.

It is presumed to be the wish of government not only to decorate their present buildings in the best possible manner, but to use the opportunity which the occasion affords to protect and develop national art. If there is to be any discrimination between native and foreign artists, the preference should be given to citizens. And our national history, in its application to the decoration of the public buildings, should take precedence of all other subjects.

If this assumption be correct, the money expended by government for the last five or six years for this purpose has been misapplied, with the exception of commissions like those awarded to Crawford and Rogers; for we find but little else which relates to our history, or in which the American mind will ever be interested. The arts afford a strong bond of national sympathy, and when they shall have fulfilled their mission here by giving expression to subjects of national interest, in which the several States shall have been represented, it will be a crowning triumph of our civilization.

Art, like nations, has its heroic history, its refined and manly history, its effeminate and sensuous history—the sure presage of national decay. Our art is just entering upon the first of these planes. Shall we allow it to be supplanted here in its young life by that of an effete and decayed race which in no way represents us? Our pride should revolt at the very idea. We should not forget so soon the homely manners and tastes of our ancestors, and the hardships they endured with undaunted hearts; but it should be our pride to welcome their venerated forms in these buildings and grounds, and surround them with the insignia of a nation's love and homage; and patriotic hearts should perform the noble work.

It is not enough that the artist select an American subject for his work. He must also be imbued with a high sense of the nature of the institutions of the country, and should have a certain assimilation with its habits and manners. He should be baptized, as it were, in the spirit of its nationality, or his labor, however well performed in an academic sense, will fail to meet a response from those for whom he toils. The Etruscan art is mainly interesting to us as a historic record of an otherwise lost nation; and the beautiful art of the Greeks derives its chief value from its nationality; and that of the Egyptians for a similar reason. It requires but little discrimination to perceive that were the arts of these different nations intermingled, they would lose their chief value—their individuality.

Are our portrait statues, in which the Greek or Roman costume has been substituted for that worn by the individuals represented, satisfactory? Do they not rather convey a feeling of shame for the paucity of invention on the part of the artist, and an acknowledgment that we have sought refuge in stuffs and draperies to conceal

our want of power in the expression of character? We want nothing thrown in between us and the facts of our history to estrange us from it. We want to be brought near it, to realize it as an existence, not as a myth. True genius presents us no nightmares, no vagaries; but is clear-seeing, and by its subtleness of perception and power of expression renders truth palpable to duller senses.

We are shown in the Capitol a room in the style of the "Loggia of Raphael;" another in that of Pompeii; a third after the manner of the Baths of Titus; and even in the rooms where American subjects have been attempted, they are so foreign in treatment, so overlaid and subordinated by symbols and impertinent ornaments, that we hardly recognize them. Our chief delight in this survey is in a few nicely painted animals and American birds and plants, in some of the lower halls; and even here one familiar with foreign art sees constantly intermingled the misapplied symbols of a past mythology, but wanting in the exquisite execution and significance of the originals.

In preparing a plan for the decoration of the Capitol, the commissioners do not recommend its immediate completion, or that its accomplishment should be hastened; for this would not only be injustice to those who come after us, but would necessitate the employment of talents which require thorough training for this particular work. The execution of these decorations must necessarily extend over a long space of time, and be subject to the will of Congress from year to year. It is, therefore, of the first importance to establish a system which can be pursued deliberately as the buildings may advance toward completion, and thus secure a harmony and adaption where otherwise confusion would be the inevitable result. The elaboration of such a system will require great care, study, and consultation, and could not well be embraced within the limits of this report. We therefore suggest it in general terms.

The rotunda, taken as a point of departure, claims the first attention in laying down this system. In the dome there will be large spaces for the introduction of pictures, which may be devoted to subjects immediately relating to the discovery of the country—the Embarkation and Landing of Columbus, and the subsequent discoveries of Ponce de Leon and De Soto. Under the great cornice which surrounds the rotundo, there is in the plan of the architect a frieze in bas-relief, which may embrace the idea of Freedom, civil and religious.

In the rotunda, below this frieze, may with propriety be represented the colonial history of the country, followed by that of the revolution; and from the rotunda towards the halls of the Senate and the House of Representatives, such other successive epochs of our history as would enable a person with ordinary intelligence to read it consecutively.

Next in order comes the legislative history of the nation and the several States, which may properly be represented in the halls of Congress, and it would doubtless add greatly to the dignity of those halls to introduce on either side of the desk of the Vice President an appropriate statue or bust, for example, of the first Vice Presidents, Adams and Jefferson; and on either side of the desk of the Speaker of the House a similar one of an eminent member of that body during the the administration of Washington; for example, James Madison and

Fisher Ames. It is the opinion of the commissioners that far greater sobriety should be given to these halls in their general effect to render them less distracting to the eye.

Few are aware how disturbing to thought the display of gaudy, inharmonious color can be made. Hence its adoption for military uses—as in showy uniforms, painted banners, bright plumes, and scarlet coats—for dramatic and scenic effects, and for all purposes where it is desired to address the senses instead of the intellect. This very quality renders it unsuited to the halls of deliberation, where calm thought and unimpassioned reason are supposed to preside. Great richness of effect may be obtained, and is, perhaps, only to be obtained, by a true sense of the subordination of inferior parts. It is believed that this criticism will hold true in regard to all efforts of the mind. It is always observable in nature, and underlies her universal laws. Color is subject to these laws as well as everything in nature. Bright colors are sparingly distributed throughout the natural world. The white, red, blue, and yellow blossoms of plants, shrubs, and trees are not over prominent even in their season of bloom; while the main masses are made up of cool greens, grays, drabs and browns intermingled, and are always harmonious and agreeable.

In regard to the four great stairways, it is not thought advisable to recommend their permanent decoration at this time, but merely to paint them in simple colors. None but pictures of the highest order should be admitted to places of such prominence. To acquire these, not only time, but the utmost care and deliberation are requisite. There can be no doubt of the ability of our artists to perform this work, but time should be given them for preparation, both in fresco and in oil. Heretofore they have been engaged, with few exceptions, on easel pictures, and it is impossible at once for them to adopt the style required in works of such magnitude. It is said that Horace Vernet has been offered one of these spaces to fill; and it is readily conceded how valuable would be the acquisition of a work from such a master for a national gallery or the Executive Mansion. But there is no evidence of his acceptance of the commission, whether from the pressure of other engagements, or from the probable conviction that every foreigner who respects his art and his own reputation must feel his incompetency to paint the history of any country but his own. Vernet's studies have been from French life and manners, and his works consequently, are thoroughly imbued with his nationality, which constitutes in fact one of their great merits. It is morally impossible that he should wholly adapt his style or form of expression to ours. The expediency therefore, of inviting even the most distinguished foreign artist to paint on the walls of the Capitol may well be questioned. The British government requires that a foreigner shall have resided at least ten years in the country before he shall even be allowed to compete for any government work. Experience has taught them the necessity of adopting this rule, and it is deemed proper that we should profit by their experience rather than purchase it for ourselves.

The rooms formerly occupied by the Senate have been assigned to the Supreme Court, and may appropriately be decorated with subjects

relating to the judicial history of the country. Subjects connected with valuable discoveries and inventions are well adapted for the decoration of the long corridors leading from the rotunda to the halls of legislation. The lobbies of the Senate and the House of Representatives afford ample space for portraying incidents in pioneer life, and other scenes, illustrating the manners and habits of different sections of the country.

The various committee rooms of both houses will, from the purpose to which they are severally applied, naturally suggest their mode of decoration.

All passages which, from their situation, cannot be well lighted should be painted simply in flat colors, with such slight ornaments as will render them light and cheerful; more than this would be inappropriate. Color should be so arranged as not to add to their obscurity, as in the present instance. In all places where stucco ornaments are exposed to constant mutilation, it is deemed useless to waste money in painting in any other than the simplest modes, as works of art would very soon be rendered worthless and unsightly in situations where every little breakage or abrasion would expose the plaster underneath. And the commissioners notice with some surprise that no provision has been made for the protection of the numerous plaster angles which occur throughout the halls and lobbies of both wings of the Capitol extension. This oversight is the more extraordinary when they find expensive painting and gilding, as in some of the lower halls and in the ante-room of the Senate, where mutilations have already taken place. Ornamentation in stucco is not properly employed where permanence is desirable. Its meritricious character renders it better suited to temporary purposes, where the employment of wood or bronze would be too expensive. Throughout the building there is a redundancy of ornamentation, cheap and showy in some instances, and employed where ornament is not required; like the breaking up of large spaces into small ones, thus destroying the very repose which the eye instinctively seeks.

There are other instances equally incongruous, where expensive bronze ornaments are fastened upon wooden doorways and jambs, much to their detriment. If it were desirable to enrich the doorways leading to the galleries of the Senate and the House, it should be done by carving the ornaments in the same material of which the doors are made; thus forming a part of them, instead of their being detached and fastened on afterwards. This would have secured harmony. The bronze employed in the present instance, when seen at the distance of a few yards, upon a light ground, has the effect of so many unintelligible dark spots, incapable of light and shade in themselves, and consequently disturbing the general unity of the halls. Carving in wood is a legitimate mode of ornamentation, and is capable of being rendered rich and effective. Bronze and marble are no less so when properly applied; but castings from natural objects can never subserve this purpose, because they must always be brought in contact with modelled or mechanically wrought surfaces, with which, however beautiful in themselves, they have no affinity or relation. This is a principle in taste long since established, and a departure

from it is an acknowledgment of an inability to fulfil, or an ignorance of the legitimate requirements of art.

The commissioners feel no ordinary pleasure in referring to the works of Crawford and Rogers; for in them they recognize a nationality and a suitability to the purposes for which they were designed. The government is fortunate in the possession of so many of the works of the former of these artists, since it has pleased an All-wise Providence to arrest his brilliant career so early in life. It is gratifying to learn that a safe and permanent location has been provided for his models of the pediment, under the government. This act was due alike to art and his memory; for the models are the only real works of his hands in their possession, and as such will be objects of national interest, and may become a nucleus for a future school of art under the national patronage.

It having been determined to fill the pediments of the eastern porticos with statues, and the statues for one of them having already been executed here in marble, under the direction of the former superintendent, it would be proper to recommend an appropriation for the remaining pediment at any time; but as the progress of the building does not render it important at present, it is deemed advisable to defer it to another year. In connexion with this subject, however, the commissioners feel constrained to add that had it not have been decided to fill these pediments with statues they would have recommended *alto-relievi* for that purpose. Statues must always convey an idea of detachment, as something superadded; while *alto-relievi* form a part of the building, and consequently admit of a treatment more in harmony with it. Various grades of relief are proper in the same work, adding thereby great richness and variety of effect. There are instances, it is true, in which statues have been employed to fill pediments, as in the case of the Parthenon, whose porticos were supported by massive Doric columns; but in cases where the Corinthian order has been adopted, as in the United States Capitol extension, *alto-relievi* have almost universally been employed, and for reasons obvious to the intelligent observer.

Before leaving the subject of government requirements in respect to art, the commissioners feel constrained to suggest that in no department in which it has been employed is there a greater apparent deficiency than in that of the government coinage and die-sinking. In all that pertains to its mechanical execution our coinage will compare favorably with that of any nation. Our great deficiency is in an artistic sense, and we should evince an unconsciousness of the requirements of our position did we neglect to express the views of the artists of the nation on this subject, whom we represent.

The coins of nations have for many centuries been designed and have served to represent the theory and purpose of the life of such nations through the images and inscriptions with which they were embellished. This usage, as is well known, originated and corresponds with that of chiefs and rulers in respect to their seals or signets and arms of state. The embellishments of the coins of sovereignties being but duplications of their arms, "which sovereign States do constantly bear," should not only be designed in significant conformity to the meaning of such arms, but in the spirit and form of the highest art.

Otherwise these symbols of national characteristics lose their chief significance. Our coinage is essentially inferior to that of France, Russia, or Great Britain, in this respect. The commissioners are aware that government has expended considerable amounts in procuring designs and models, but unfortunately the skill of competent artists has not been called into requisition. It seems absurd to boast of distinguished artists and not to employ their talents in every department pertaining to their professions which the government may require. The commissioners feel it to be important that there should be harmony in the spirit and form in all departments of our national art, as a basis of all future developments in that direction. Art as employed in mere decoration has but little national importance, but as an expression of thought and intention it ranks with the highest efforts of the mind.

In expenditures of money for works of art it is important as a wise measure of economy that productions of sufficient merit should be secured to render their future removal or obliteration unnecessary. It is true that governments as well as individuals must purchase their experience in these as in all other matters; but it would seem that the system heretofore pursued in this particular, from its inadequacy to meet the requirements of the age and its falsity as an expression of our artistic development, had been already indulged in with sufficient liberality. Nations have been proud of noble works of art, and even when their power and splendor in other respects have departed, art has stood forth to remind them of their former greatness. For us to flaunt in the borrowed and fragmentary arts of another country, is like the Indian who abandons his native wild dignity and forest dress, and struts through the streets of a city in a cast-off military uniform.

It is believed that the true method of procuring designs for statuary and paintings, as a general principle, is to invite liberal competition, with such regulations as shall secure to every artist an impartial and unbiassed adjudication of his work; but the well-known repugnance of artists of the first rank, who have achieved a national reputation, to compete with each other, would render this a doubtful policy to pursue with them. It is therefore deemed but respectful and proper to award to such artists commissions for works for which their talents and acquirements have fitted them. The commissioners are sustained in this position by the experience and practice of all nations in similar cases.

In the erection of statues, monuments, and fountains in the public grounds, the same system of subordination should be observed which is contemplated in the distribution of works of art in the public buildings. They should be arranged, so far as practicable, in harmony with the plan of the grounds. But, as the more important of these parks are yet to be planned, a mere suggestion in regard to them will be sufficient for the present. When Congress shall have made appropriations for their final arrangement and completion, landscape gardeners should be invited to submit designs for that purpose.

As the two halls of Congress and other portions of the building are now ready for the reception of works of art, the commissioners recommend the commencement of their decoration. For this purpose an

appropriation will be necessary; the estimate for which will be found in a note appended to this report.

The commissioners finding their functions and powers not sufficiently defined by the acts of Congress of 1858 and 1859, to enable them to perform the duties contemplated in their appointment, would respectfully urge upon the attention of Congress the necessity of such further legislation as shall render the commission efficient and useful to the government; which they believe can best be effected by clothing them with the authority recommended by the artists of the United States, in the following extract from their memorial to Congress in 1858: "Your memorialists respectfully urge that the great end proposed, viz: 'the advancement of art in the United States,' may be most surely and completely attained by the establishment of an art commission, composed of those designated by the united voice of American artists as competent to the office; who shall be accepted as the exponents of the authority and influence of American art; who shall be the channels for the distribution of all appropriations to be made by Congress for art purposes, and who shall secure to artists an intelligent and unbiased adjudication upon the designs they may present for the embellishment of the national buildings."

HENRY K. BROWN.
JAMES R. LAMBDIN.
JOHN F. KENSETT.

The PRESIDENT, *of the United States.*

NOTE.

Estimates of appropriations required to carry out the recommendation of the foregoing report.

For eight pictures to fill four panels in each of the halls of Congress	$40,000
For four statues for Senate retiring room	20,000
For two statues for eastern front door of south wing	5,400
For two colossal busts for Senate chamber	3,000
For two statues for House of Representatives	10,000
For painting Speaker's room	2,000
For painting private stairways and passages behind Speaker's chair	7,500
For painting room east of Speaker's room	2,000
For painting Post Office, south wing	4,000
For modelling valves for two eastern doorways	12,000
For casting and chasing the same in bronze, (original estimate)	16,000
For commencing the decoration of lobbies and halls of both wings of Capitol extension and designs for the same	20,000
For casting statue of Freedom for new dome	15,000
For painting ante-room of Senate	10,000
	166,900
